Physics

A Successful Blakiston Text
for Every Need

FOLEY—College Physics, 3rd Edition
Widely adopted; giving excellent results. For students in arts and sciences.
By A. L. Foley. 470 Illus. 757 Pages. $3.75

DUFF (And Contributors)—Physics, 8th Edition
For engineering and science students. A standard text. Written by teaching physicists. Edited by A. Wilmer Duff. 630 Illus. 715 Pages. $4.00

HECTOR, LEIN & SCOUTEN—Electronic Physics
Presents the fundamentals of light and electricity by means of modern electronic concepts. By L. Grant Hector, Herbert S. Lein and Clifford E. Scouten. 289 Illus. Mostly Colors. 355 Pages. $3.75

MORRISON & MORRISON—Experimental Physics
All the experimental problems in this book are studies. Emphasis on manipulation, correct gathering and organization of data, solutions by equations. By Edwin Morrison and S. E. Morrison. 189 Illus. 235 Pages. $2.00

HOYT—Concise Physics, 2nd Edition
It studies fundamentals with applications to engineering. By John E. Hoyt. 179 Illus. 445 Pages. $2.50

STRANATHAN—The “Particles” of Modern Physics
A new and refreshing presentation which can be followed by the average student in general physics. By J. D. Stranathan. 218 Illus. 371 Pages. $4.00

McCORKLE—Survey of Physical Science for College Students
This text is designed for a three hour year’s course for freshmen. By Paul McCorkle. 273 Illus. 471 Pages. $2.75

DUFF & PLIMPTON—Elements of Electro-Magnetic Theory
Designed for a brief intermediate course. By A. Wilmer Duff and S. J. Plimpton. 86 Illus. 173 Pages. $2.75

CULVER—Musical Acoustics
For a one-semester course for students majoring in music, this book gives a modern survey of the physical basis of music. 128 Illus. 194 Pages. $2.50

WEBER—Temperature Measurement and Control
This book outlines an experimental study of the methods of temperature measurement with principles necessary for their intelligent use and extension. By R. L. Weber. 183 Illus. 430 Pages. $4.00

Bacto-Agar
Bacto-Agar is a purified Agar prepared from
domestic material. In the manufacture of
Bacto-Agar extraneous matter, pigmented portions,
and salts are reduced to a minimum, so that the
finished product in the form of fine granules will
dissolve rapidly, giving clear solutions.
Bacto-Agar is distributed only for use in
bacteriological culture media upon proper
certification by the purchaser.

Bacto-Asparagine
Bacto-Asparagine is a purified amino acid
widely used in synthetic culture media and in the
preparation of tuberculin.

SMACO
RESEARCH BIOCHEMICALS
BEAR NEW LABELS

GENERAL BIOCHEMICALS, Inc., manufacturing subsidiary of S. M. A. Corporation, will assume distribution of the special products for nutritional research heretofore distributed by Research Laboratories, S. M. A. Corporation.

The only change is on the label—the products are made in the same laboratories by the same people as before.

Vitamin Test Diets, Crystalline Vitamins, Amino Acids, and other special research biochemicals will be available, conveniently packaged and economically priced.

This institution will continue to produce new research products of interest to investigators in the nutritional field.

A new price list is available on request from

GENERAL BIOCHEMICALS, INC. • CHAGRIN FALLS, OHIO

DIVISION WYETH INCORPORATED
LINDE RARE GASES AND MIXTURES

... Spectroscopically Pure
... Easily removed from bulb without contamination

Scientific uses for Linde rare gases include—
1. The study of electrical discharges.
2. Work with rectifying and stroboscopic devices.
3. Metallurgical research.
4. Work with inert atmospheres, where heat conduction must be increased or decreased.

Many standard mixtures are available. Special mixtures for experimental purposes can be supplied upon request.

The word "Linde" is a trade-mark of

MA NEUROANATOMY
A series of 100 2 x 2" (35 mm.) Kodachrome transparencies (lantern slides) — Photomicrographs made from the collection of Dr. Adolph Elwyn, Columbia University, College of Physicians and Surgeons, N. Y. C.

MH NORMAL HISTOLOGY
A series of approximately 800 2 x 2" (35 mm.) Kodachrome photomicrographs (lantern slides) of Normal Histology.

CREDIT — Slides from the collections of . . . Dr. Ramon Castroviejo, The Eye Institute, Presbyterian Hospital, New York City Dr. Moses Diamond, Columbia University College of Dentistry, New York City Dr. S. R. Detwiler, College of Physicians and Surgeons, Columbia University, New York City Dr. Adolph Elwyn, College of Physicians and Surgeons, Columbia University, New York City Dr. S. J. Kornhauser, University of Louisville, Louisville, Ky. Dr. Wendell J. S. Krieg, Dept. of Anatomy, New York University College of Medicine Dr. Daniel Ziskin, Columbia University College of Dentistry, New York City

ME EMBRYOLOGY
A series of 16 2 x 2" Kodachrome Photomicrographs of Embryology.

MD DENTAL PATHOLOGY
A series of 137 2 x 2" Kodachrome projection slides, made with the cooperation of Dr. Charles G. Darlington and Dr. Oscar Miller of New York University College of Dentistry.

MO1 OPHTHALMOLOGY
A series of 200 2 x 2" (35 mm.) Kodachrome slides made with the cooperation of Dr. Donald Weeks Bogart of the New York Eye and Ear Infirmary, New York City.

MO2 OCULAR PATHOLOGY
A series of approximately 300 2 x 2" (35 mm.) Kodachrome Photomicrographs on ocular pathology made with the cooperation of the Institute of Ophthalmology of the Presbyterian Hospital of New York City.

MS2 DERMATOLOGY and SYPHILOLOGY
A series of 200 2 x 2" (35 mm.) Kodachrome transparencies (lantern slides) made with the cooperation of Prof. Frank C. Combes, Dept. of Dermatology, N. Y. U. College of Medicine; Herman Goodman, M.D.; and Dept. of Health, N. Y. C.; Theodore Rosenthal, M.D., Director, Bureau of Social Hygiene.

MS SKIN—NEVI and CANCER

MT TROPICAL DISEASES
A series of approximately 150 2 x 2" (35 mm.) Kodachrome transparencies (lantern slides).

CREDIT: Made with the cooperation of Dr. Henry E. Meloney, Dr. Harry Most and Dr. Dominic DeGiusti, Department of Preventive Medicine, New York University College of Medicine. Slides Nos. MT43, 46, 47 are from the Army Medical Museum.

MS3 DERMATOLOGY
A series of 100 2 x 2" (35 mm.) Kodachrome slides on Skin Diseases made with the cooperation of Dr. George M. MacKee, Director, and Dr. Charles F. Sims, Associate, New York Skin and Cancer Unit of Post-Graduate Medical School and Hospital, New York City. The classification of diseases follows the classification given in the tenth edition of Diseases of the Skin by Richard Sutton and Richard Sutton, Jr.

MU UROGENITAL PATHOLOGY
A series of 250 photomicrographs, photographs of gross specimens and clinical photographs being made with the cooperation of Dr. M. M. Melicow, Columbia University College of Physicians and Surgeons, Department of Urology.

STRUMPELL and JACOB
NEUROLOGY CHARTS
A series of 21 2 x 2" (35 mm.) Kodachrome slides of the well-known Strumpell and Jacob Neurology Charts.

KAPPERS BRAIN CHARTS
A series of 9 2 x 2" (35 mm.) Kodachromes of the well-known Kappers Charts on the comparative anatomy of vertebrate brains.

BANDAGING CHARTS
A series of 12 2 x 2" (35 mm.) Kodachromes of bandaging charts.

SCHULTZE OB CHARTS
A series of 20 2 x 2" (35 mm.) Kodachrome slides of the well-known Schultze Obstetrical Charts.

ANGLES MEASURE DISPERSION REFRACTIVE INDEX

SPECTROMETER

L-112

Precision Tangent Screw of 5° range permits direct reading to 6 seconds.

• Convenient Manipulation
• Stable Adjustments
• Excellent Optical Parts
• Rigid Construction

Our line of Optical and Measuring Instruments includes various types of Spectrometers, Spectrographs, Optical Benches, Comparators, Toolmaker Microscopes, Optical Parts, Dividing Machines, Chronographs, etc.

THE GAERTNER SCIENTIFIC CORPORATION
1204 Wrightwood Ave.
The Beckman Spectrophotometer is a precision instrument entirely self-contained, with a unique electronic circuit for rapid measurement of percentage Transmission and Density. It consists of a quartz monochromator with an adjustable wavelength scale graduated from 200 to 20000 mmμ. The wavelength scale is readable to 0.1 mmμ in the ultraviolet and to 1.0 mmμ in the infrared, with scale accuracy better than 1 mmμ in the visible and ultraviolet.

Attached to the monochromator case are the light source, sample holder, and phototube compartment. Two types of light source are available; a tungsten lamp for the range 320 to 1000 mmμ and hydrogen discharge tube for supplying a continuous ultraviolet spectrum between 350 and 220 mmμ.

The Beckman Spectrophotometer is remarkably versatile, rapid and simple to operate. It meets widely varying requirements of research and control work with no sacrifice in accuracy or convenience.

**Beckman Spectrophotometer, Model D.** For measurement in the range 320 to 1000 mmμ. Complete with blue-sensitive and red-sensitive Phototubes, Tungsten Lamp, Cell Holder, 4 selected Corex Absorption Cells and dry batteries, *but without storage battery* ........................................... $764.00

**Beckman Spectrophotometer, Model DU.** For measurement in the range 220 to 1000 mmμ. Same as Model D, except equipped with ultraviolet-sensitive Phototube ................................................................. $792.00

**Ultraviolet Accessory Set.** For use with Model DU Spectrophotometer. For measurement in the range 220 to 320 mmμ. Set includes Hydrogen Discharge Lamp mounted in Housing, Power Supply Unit, and one pair of selected Fused Silica Cells ................................................................. $260.00

*Complete descriptive literature and current prices will be sent on request.*
An assistant in the water-treating laboratory of the Zeolite Chemical Co., Medford, N. J., using an L&N pH Indicator to check the pH of effluent from a zeolite softener. Such service shows the dependability of the Indicator, because the figures for pH values, as measured here, are sometimes forwarded to municipal or industrial water works, and must therefore be fully trustworthy.

For Dependable pH Checking
Use This PORTABLE L&N pH INDICATOR!

Shown above is a pH Indicator intended for just one purpose—giving results which are dependable. Extreme dependability isn’t easy—or cheap—to build into a pH instrument which may be used either in damp, cool labs or in hot, muggy ones; and which will last for years. Here are some important constructional features which fit this Indicator for such use:

1. The Indicator is so well “shielded” from electrical disturbances that it retains its full accuracy of \( \pm 0.1 \) pH even when ambient relative humidity is 95 and temperature is 85 F (30 C).

2. Water temperature’s effect on pH is compensated by setting a dial; no computations.

3. Dry cells are in their own compartment, where they can’t corrode wiring, etc.

And here are some operating features which make it easy for anyone to use this Indicator:

1. The scale is long and “open” for quick reading.

2. Electrodes are filled and sealed at our factory, and are highly stable.

3. A whole end of the case swings out, making electrodes and sample easily accessible.

4. In running titrations, the Indicator’s double range of 0–8 pH and 6–14 provides a 2-pH overlap which is particularly useful. Electrode arrangement is also very convenient for titrations.

5. Maintenance is negligible, consisting of adding KCl every 6 or 8 weeks, washing the electrodes occasionally, and replacing dry cells at infrequent intervals.

This Indicator is moderately priced for quality at $160.00. It comes complete with directions and with everything necessary for measuring pH. If you wish complete details ask for catalog E-96(2), free on request.

THE AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE
PRELIMINARY ANNOUNCEMENT OF THE CLEVELAND MEETING

Edited by F. R. MOULTON
PERMANENT SECRETARY

After a lapse of two years during which the American Association for the Advancement of Science has held no meetings, it will meet for the fifth time in Cleveland, Ohio, from September 11 to September 16, inclusive. The previous meetings in Cleveland were held in 1853, 1888, 1913 and 1931. In 1853 a meeting scheduled for Cleveland was canceled because of an epidemic of yellow fever along the Ohio River and farther south. There have been fears that this meeting would have to be canceled because of the war. This preliminary announcement has been delayed because of constant changes in the programs due to the uncertainties that have prevailed during the past few months. The choice has been between an early announcement that would be erroneous to an appreciable extent and an announcement so late that it would not be of maximum value. In spite of all difficulties the program will consist of many notable sessions, though in number of scientific societies meeting with the association and in the number of papers presented will fall far below several meetings immediately preceding the war. But it may be confidently expected that after the close of the war scientists will resume their normal work and their meetings with increased enthusiasm.

HOTELS AND HEADQUARTERS

General headquarters of the meeting will be at the Hotel Statler. The headquarters of sections and affiliated societies are distributed among hotels as follows:
