Fisher ELECTRO-HEMOMETER

for Measuring

Hemoglobin

Measures Directly in Grams per 100 ml. and % of Normal

The Fisher Electro-Hemometer (Pat. Applied for) is a photo-electric instrument widely employed for determining the hemoglobin content of blood. It operates on the acid-hematin method and provides the means of making hemoglobin determinations with a degree of accuracy and reproducibility not possible by ordinary visual means.

This instrument embodies all the advantages of the photometric method while retaining the simplicity of operation that facilitates rapid use.

With the portable, self-contained Electro-Hemometer, different workers obtain the same results because readings are made directly without calculations and because no human judgment in matching colors is required.

Fisher Electro-Hemometer................................. $65.00

Supplied with the instrument are a Photometric Cell, Standardizing Cell, Diluting Pipette, batteries and printed directions. Simplified instructions for operation are engraved on the panel.

(Leather Carrying Case, $5.00 Additional)

Bacto-Agar

Bacto-Agar is a purified Agar prepared from domestic material. In the manufacture of Bacto-Agar extraneous matter, pigmented portions, and salts are reduced to a minimum, so that the finished product in the form of fine granules will dissolve rapidly, giving clear solutions.

Bacto-Agar is distributed only for use in bacteriological culture media upon proper certification by the purchaser.

Bacto-Asparagine

Bacto-Asparagine is a purified amino acid widely used in synthetic culture media and in the preparation of tuberculin.

New (3d) Edition Just Ready

A TEXTBOOK OF HISTOLOGY
THE FUNCTIONAL SIGNIFICANCE OF CELLS AND INTERCELLULAR SUBSTANCES
By E. V. Cowdry
Professor of Anatomy, The School of Medicine; Washington University, St. Louis, Mo.

Thoroughly revised. Large octavo, 426 pages, illustrated with 317 engravings, 13 in colors.
Cloth, $7.00.

In the preparation of the third edition of this work, the author has simplified his text by the omission of certain details so as to give increased emphasis to what he believes to be the fundamentals. The object has not been simply to expedite the teaching of histology, but rather to permit a closer focussing of attention on the correlation of form and function by stressing the dynamics of the body in action.

BOOKS AND PERIODICALS

POSITIONS WANTED

Meteorologist, Sc.D., 13 years research experience, 7 years teaching, weather-seismograph station maintenance, 4 years division chief at large Eastern college, desires change. Box 114, "SCIENCE," Smithsonian Institution Building, Washington 25, D. C.

Physical research director wants responsible position with a progressive company that can use his experience in x-ray diffraction, infrared and ultraviolet spectroscopy, etc., to the best advantage. Successful record. Can handle men. Box 115, "SCIENCE," Smithsonian Institution Building, Washington 25, D. C.
An inexpensive Spectrometer ideal for instruction in its uses and applications

This instrument has all the essential adjustments of larger more expensive models and can be used for all the standard experiments. The 125mm circle reads to 1 minute by vernier. Collimator and telescope have 20mm apertures. An adjustable 8mm slit is provided. The telescope is supplied with the high power Gauss eyepiece, rack and pinion focussing, and a tangent screw for delicate adjustment. Delivery from stock.

HAVE YOU TRIED THE NEW PURINA LABORATORY CHOW?

it's Nutritionally Adequate!

For rats, mice, hamsters and dogs, Purina Laboratory Chow is a complete ration. We recommend it be fed with nothing else except drinking water since it meets the known nutritional requirements of these animals for growth, reproduction and vigor. Cats need some meat or meat juices with their Laboratory Chow, while monkeys need vitamin C (ascorbic acid).

In War and Peace

In the laboratories of thundering war plants producing guns, planes, explosives and the thousand and one weapons of modern war, you will see the familiar boxes of WHATMAN Filter Papers.

You will see them also in the laboratories of Educational and Research Institutions, in Hospitals, in fact wherever there is a laboratory filtering problem to which paper is adapted.

Users of WHATMAN Filter Papers find them uniformly reliable; their use makes for rapid, accurate analyses; they are good tools for good workmen.

Announcing
THE JOURNAL OF METEOROLOGY
A new Quarterly publication of The American Meteorological Society

Table of Contents, Vol. 1, Nos. 1 & 2:

On the Theory of Cyclones, J. BREKENS and J. HOLMBOE
Temperature Changes during Formation and Dissipation of West Coast Stratus. MORRIS NEUBURGER
Determination of the Normal Regions of Heating and Cooling in the Atmosphere by Means of Aerological Data. HARRY WEXLER
The Recurvature of Tropical Storms. H. RIEHL and R. J. SHAFER

This Journal has been established to provide a means of dissemination for original papers in theoretical and applied meteorology. Between now and the end of 1945 two volumes will be published, the first consisting of two issues and the second of four issues; thereafter there will be four issues per year.

Annual subscriptions* $6.00
Subscriptions for first six issues $9.00

Subscription orders should be sent to the American Meteorological Society, Milton 86, Mass. Please make checks payable to the American Meteorological Society. (Add 10% for mailing charges to countries outside the Americas.)

* Will be accepted only for Vol. 2, and succeeding volumes.
UNUSUAL WAR BARGAINS IN LENSES & PRISMS

For a number of years the Edmund Salvage Company has been selling seconds in lenses and prisms principally to amateurs. Now that we are getting a wide variety of War Surplus optical items which we can offer at extremely low prices, we urge a careful examination of our availabilities by colleges, researchers and all individuals interested in optics. Stock is constantly changing. Many lots are secured in quantities too limited to advertise. These are offered exclusively to our "flash" customer list. An order will make you eligible for these mailings. We GUARANTEE satisfaction on all items purchased.

TANK PRISMS

In order that the tank driver shall not get shot in the face, two of these Silvered Prisms are used to make a periscope (without magnification). We have secured a number of these that are very slightly chipped, making possible their sale at a very low price. They are 90°-45° degree prisms of huge size—5¼", long. 2¼" wide, finely ground and polished. A Periscope, easily constructed with two Silvered Tank Prisms, can be used to see and photograph fish under water, to view high or low gauges, to make camera stereo attachment, photometer cube, range finder, etc. Excellent also for classroom demonstrations and experiments.

Stock No. 3004-W ... SILVERED TANK PRISM—Price $2.00 each Postpaid.

Stock No. 3005-W ... PLAIN TANK PRISM—Price $2.00 each Postpaid. This one is excellent for projecting all the colors of the spectrum—a beautiful sight.

FOUR TANK PRISMS—Special—$7.00 Postpaid... This is the most sensational bargain we have ever been able to offer.

PORRO ABBE PRISMS

Stock No. 3000-W .................. 25¢ each Postpaid Size 9 mm x 17 mm ... another war bargain. Normal prices would be 20 to 40 times above quotation. At this exceptionally low price, you should purchase a few of these, even though you have no immediate need for them. Such a bargain will not be available long.

LENS SET—No. 10-W—60 lenses ..... $10.00 Postpaid
Contains a wide variety of simple lenses and a few achromats.

TANK PERISCOPE

Complete set mounted components. Rugged, strong, originally constructed for U.S. Tank Corps. Consists of a fine Periscope Mirrors mounted in metal and plastic. Only plywood body frame is required to finish this exceptional Periscope. First surface mirror is well protected by glass windows. Set weighs 2¼ lbs. Overall length of mount 6¼", width 2½". Would normally retail at $40 to $50.

Stock No. 700-W ........... $2.00 Complete Set Postpaid

ATTENTION—SCHOOLS AND COLLEGES—Don't lose out on these war surplus bargains. While we do not give discounts to individuals or commercial concerns ... we do give an educational discount to cooperating schools and colleges, to assist in the teaching of optics. Write for details on school stationery.

ORDER BY SET OR STOCK NO. • SATISFACTION GUARANTEED

EDMUND SALVAGE COMPANY

27 W. CLINTON AVE. DEPT. 24, P.O. AUDUBON, NEW JERSEY
For routine photomicrographic work in every field where the microscope is used, the Bausch & Lomb K Camera provides a simple, economical method of recording the results of microscopic findings. It may be used with any conventional microscope fitted with a sub-stage condenser.
PROGRESS IN THE CONQUEST OF VIRUS DISEASES

By Dr. W. M. STANLEY

MEMBER OF THE ROCKEFELLER INSTITUTE FOR MEDICAL RESEARCH, PRINCETON, N. J.

Viruses are small infectious agents that can cause disease in man, other animals, plants and bacteria. They range in size from about 10 Å, or a size slightly smaller than that of certain protein molecules, in an almost continuous spectrum of sizes up to about 300 Å, or a size slightly larger than that of certain accepted living organisms. A given virus can multiply and cause disease only when within the cells of certain specific living organisms. No virus has been found to reproduce in the absence of living cells. During multiplication viruses occasionally change or mutate to form a new strain which in turn causes a new disease. Viruses were not discovered until 1892, when Iwanowski demonstrated that the causative agent of the mosaic disease of tobacco would pass through a filter that retained all known living organisms. Six years later Beijerinck proved that this agent was not an ordinary living organism and recognized it as a new type of infectious disease-producing agent—namely, a virus. The same year Loeffler and Froesch demonstrated that foot-and-mouth disease of cattle was caused by a virus. The discovery of the first virus disease of man, that of yellow fever, was made in 1901 by Reed and coworkers. Since then over two hundred diseases of man, other animals and plants have been found to be due to viruses. Among such diseases are smallpox, measles, poliomyelitis, St. Louis encephalitis, influenza, virus pneumonia, fever blisters, equine encephalomyelitis, rabies, hog cholera, dog distemper, fowl pox, jaundice of silkworms, tumorous growths in fowls and in other animals, various yellows and mosaic diseases of plants and the transmissible lynx of bacteria.

The agents responsible for these and other virus diseases are characterized by their small size, by their
