Recently Published—Definitely Outstanding

**MILLARD & KING’S Anatomy & Physiology**

*New (2nd) Edition*—This text represents, we believe, one of the most significant contributions to the teaching of elementary anatomy and physiology in print today. Outstanding for its superb balance and refreshing style, it covers the basic facts essential in modern courses.

The inherent qualities of the text have been intensified even more in the revision. Several new discussions have been added, others rewritten and the unusual illustrative material still further improved by 44 new illustrations, making a total of 297 of which 43 are in colors.

By **NELLIE D. MILLARD**, R.N., M.A., Instructor in Anatomy and Physiology, School of Nursing, Michael Reese Hospital, Chicago; and **BARRY GRIFFITH KING**, Ph.D., Lieutenant, U.S.N.R., Naval Medical Research Institute, National Naval Medical Center, Bethesda, Md. 314 pages, with 297 illustrations, 43 in color. $3.00

**BOYD’S Preventive Medicine**

Here is a book which exposes the underlying causes of disease, points out the objective to be reached in its control, and definitely shows the way to success.

In the *New (7th) Edition*, will be found a wealth of new and revised material. Dr. Boyd has brought the book up-to-date on every phase of preventive medicine. There are new considerations of rheumatic fever, leptospirosis, and asbestosis; the section on nutrition has been completely rewritten; and new material has been added to the discussions of whooping cough, epidemic influenza, acute lobar pneumonia, tuberculosis, streptococciosis, primary encephalitides, etc. There are virtually rewritten sections on infantile paralysis and on pneumococcus pneumonia, while the chapter on *Diseases Transmitted by Contact* contains the latest information on syphilis and gonorrhea.

By **MARK F. BOYD**, M.D., M.S., C.P.H., Field Staff Member, International Health Division of the Rockefeller Foundation. 301 pages, 8½” x 9¼”, with 187 illustrations. $5.50.

**FROBISHER’S Fundamentals of Bacteriology**

An outstanding text that furnishes a firm foundation on which the student may build for future specialization. *New (3rd) Edition*.

By **MARTIN FROBISHER**, Jr., S.B., Sc.D., F.A.A.A.S., F.A.P.H.A., Associate Professor in Bacteriology, The Johns Hopkins University. 824 pages, 5½” x 7¾”, with 398 illustrations. $4.00

**LABORATORY MANUAL for General Bacteriology**

Readily adapted to correlation with any standard text on the subject. Morphological and physiological aspects are emphasized.

By **DEPARTMENT OF BACTERIOLOGY AND IMMUNOLOGY**, University of Minnesota. 54 pages of experiments, 8” x 11”, with 54 pages for recording results, illustrated. $1.00

W. B. SAUNDERS COMPANY, West Washington Square, Philadelphia 5

Reflect Now!

ON YOUR SPECIAL MIRROR NEEDS FOR THE FUTURE!

We at Ithaca have been making front-surface mirrors of CHROMULINUM and semi-transparent mirrors of DUOLUX for the last ten years. They have come to be recognized throughout laboratories and industries as the standard of hardness, brilliance, and permanence.

Microscopists!

New leaflet gives interesting data on Immersion Oil for microscope objectives and outlines eight advantages of Shillaber's Immersion Oil over Cedar Oil; also available: New Data on Certified Index of Refraction Liquids and Shillaber's Examination Liquids for Microscopy.

Just ask for Leaflets 45-B

Reagents for Chemical Microscopy

Shillaber's Photomicrography, published 1944, by John Wiley & Sons, Inc., presents over 700 pages of useful optical and microscopical data for advanced workers in microscopy and photomicrography. Will be furnished at publishers price, $10.00; or, leaflet on request.

45% greater capacity

at amazingly low cost!

This new "LAB-AID" cabinet is the ultimate solution to the filing problems encountered in the laboratory. It is of welded-steel, fire-resistant construction throughout. Files 3" x 1" or 3" x 2" microslides, 2" x 2" transparencies, large lantern slides, index cards, even paraffin blocks... in single-row drawers, all fitting interchangeably into a smooth-tracking master drawer-rail system. Unit-sections, assembled in any combination, can be used singly, or stacked to any convenient height. With all these advantages, the cost-per-slide capacity in the "LAB-AID" cabinet is the lowest ever. Investigate this remarkable equipment... the coupon will bring details.

The Technicon Company
215 East 149 Street
New York 51, N. Y.

Please send me details concerning your "LAB-AID" microslide filing cabinet.

NEW RADIOACTIVITY INSTRUMENTS

IMPULSE REGISTER Accurately registers up to sixty impulses per second, and will solve your problems in high speed impulse or mechanical operation counting. Price FOB factory . . . . . . $55.00

GEIGER MULLER COUNTER An especially fine piece of equipment with numerous applications in radioactivity work. Price, FOB factory . . . . . . $345.00

A NEW GEIGER COUNTER TUBE A compact, completely enclosed counter tube of sturdy construction with many important features. Used extensively by leading laboratories. Price, FOB factory . . . . . . $50.00

The instruments here illustrated are rugged and practically foolproof . . . made from the highest grade materials and designed for dependable performance under actual working conditions . . . reliable performance at reasonable cost. Place your order now by mail.

Detail specifications upon request

CYCLOTRON SPECIALTIES COMPANY
Station B, Moraga, California

EXPERIMENTAL ANIMALS DEPENDABLE UNIFORMITY

Routine testing for bacterial infections and research projects for new methods of disease control are carried on in our well equipped modern laboratory. Better animals are being produced every day through the application of science.

CARWORTH FARMS INC.
NEW CITY - ROCKLAND COUNTY - NEW YORK

GARCEAU ELECTROENCEPHALOGRAPHS
A.C. Operated Inkless Writing
Shipped Ready to Run
No Batteries Require no Shielding
Prompt Delivery

THE JUNIOR GARCEAU ELECTROENCEPHALOGRAPH
A simplified inexpensive instrument for recording electrical potentials of the brain. Built-in interference eliminators permit use anywhere. Inkless records—no photography or film-development required. Instantaneous localization with any 2 of the 10 leads.

All Garceau Electroencephalographs operate entirely from the 115 volts, 50 or 60 cycle power lines.

ELECTRO-MEDICAL LABORATORY, INC.
HOLLISTON, MASSACHUSETTS, U. S. A.
**Klett made ...**  
**Glass Absorption Cells**

Fused under high temperature with acid, alkali and other solvent resisting cement. Optical flat walls. Many stock sizes. Special requirements made to order.

*Sole manufacturer in the United States of fused Electrophoresis cells*

**MAKERS OF COMPLETE ELECTROPHORESIS APPARATUS**

**KLETT SCIENTIFIC PRODUCTS**

Klett-Summerson Photoelectric Colorimeters, Colorimeters, Nephelometers, Fluorimeters, B10 Colorimeters, Electrophoresis Apparatus, Glass Standards, Klett Reagents

**Klett Manufacturing Co.**  
179 East 87th Street, New York, New York

**STOKES High Vacuum GAGES**

- Require No Calibration.  
- Accurate Readings in the Presence of Gases and Condensable Vapors

This new improved Stokes Patented (McLeod type) Vacuum gage provides rapid (2 to 5 seconds) readings within the micron range with permanent accuracy under all conditions. It does not require calibration against other gages and retains its accuracy in the presence of all gases including hydrogen, and condensable vapors including water and oil.

These gages are compact, rugged, convenient to use as portable instruments or on fixed mountings. They are widely used in physics, organic and physical chemistry laboratories and by industry.

- Two models—(AA)—0 to 5000 microns, with readings to 1/10 micron.

... for applications such as drying blood plasma, penicillin and biologicals from the frozen state, organic distillation under higher vacuum than heretofore (in which ordinary closed-end manometers are not adequate) and for testing efficiencies of vacuum methods, apparatus and systems.

FOR LOW-TEMPERATURE

* Testing
* Storing
* Conditioning

* Testing instruments, aircraft equipment and many materials to determine their performance, durability, etc. at sub-zero temperatures.
* Storing metal parts at low temperatures for conditioning prior to use, as in chilling parts for expansion fitting, etc.
* Treating tool and other steels by chilling to produce desired characteristics otherwise difficult to obtain by ordinary methods of treatment.
* Chilling aluminum rivets to retard age hardening and keep them soft enough for easy driving.
* Accelerated ageing of metals to prevent "growth."
* Storing serums, blood, chemicals, etc.
* Ideal for use as a food-freezing pilot plant.

Constant Temperature

SUB-ZERO CABINET
Dry Ice Cooled

Temperature Range:
Minus 120 to Plus 220°F.
Constancy: ± ½°F.

DECIDUOUS ORCHARDS

By WILLIAM HENRY CHANDLER
Professor of Horticulture,
University of California

Octavo, 438 pages,
illustrated with 109 engravings.
Cloth, $4.50.

This work discusses the processes involved in the growth and fruiting of trees. It then describes the processes of developing and mature fruits, responses to climate, to rootstock, to soil conditions, to nutrient and water deficiencies and to treatments such as pruning. The special characteristics of each deciduous orchard species are then discussed. It reflects the most recent discoveries in scientific horticulture, botany and plant and soil chemistry.

LEA & FEBIGER
WASHINGTON SQUARE, PHILADELPHIA 6, PA.

Some Used Instruments
Available for Immediate Delivery:

Bausch & Lomb Horizontal Micro Camera 12 x 12" with optical bench, vibration absorber, etc. $175.00
Gaertner Kathetometer 95.00
Chambers Manipulator 65.00
Zeiss Pulfrich Photometer 250.00
Reichert Metallographic Microscope (upright) 180.00
Fuess Polarizing Microscope 150.00
Leitz Medical Microscope with mechanical stage 135.00

Also: Leitz and Zeiss mechanical stages, darkfield condensers, objectives and eyepieces.

Now Available

TO SCIENTISTS—

9-AMINOACRIDINE HYDROCHLORIDE
"NATIONAL"

An outstanding antiseptic which is many times more potent than the available sulfonamides.

9-Aminoacridine hydrochloride (either powder or solution) provides the following advantages as an antiseptic:

1. Non-staining.
2. Effective in the presence of pus.
3. Possesses an extremely broad bacterial spectrum, being effective against anaerobes, gram negative and gram positive bacteria and is particularly effective against species of the proteus genus.
4. Non-toxic in concentrations commonly employed. A 1:1000 solution can be applied to burns without injurious effects.
5. Potent for skin sterilization.
6. Stable, even in presence of light.

Five gram and ten gram lots are now available for experimental use and clinical investigation. Write for further data and bibliography. Address:

DRUG COMPANY

4663-85 STENTON AVENUE • PHILADELPHIA 44, PA.
In Medicine, Biochemistry, and in the teaching of these sciences, the Bausch & Lomb Direct Reading Biological Colorimeter fulfills the need for an accurate, easily read instrument. It provides a wide angular field which makes comparisons easier and more accurate. Direct reading scale may be read from the eyepiece position. Preference rating desirable for prompt delivery. Bausch & Lomb Optical Co., Rochester 2, N. Y.
HUMAN VISION AND THE SPECTRUM

By Professor GEORGE WALD

BILOGICAL LABORATORIES OF HARVARD UNIVERSITY

The basic relation which describes the response of the eye to radiation is its sensitivity to the various wave-lengths of the spectrum. The limits of this function define what is meant by light. Its form expresses fundamental properties of the retinal receptors, and of the ocular structures which light must penetrate to reach them.

The human retina contains two groups of receptors:

1 This research was supported in part by a grant from the Josiah Macy Jr. Foundation. Part of the work was reported to the Optical Society of America at its meeting in October, 1944 (Jour. Opt. Soc. Amer., 34: 769, 1944). The remainder was to be reported to the society at its meeting in April, 1945, since cancelled. Most of the experiments on aphakic eyes were performed in the summer of 1943 at the Dartmouth Eye Institute, Hanover, N. H., to whose director, Professor Adelbert Ames, Jr., and ophthalmologist-in-chief, Dr. Hermann Burian, I am most grateful. I wish to acknowledge also the technical assistance of Ruth Hubbard with some of the experiments.

rods, which function in dim light; and cones, the organs of vision in bright light, and color vision. The rods are mainly sensitive at lower wave-lengths than the cones. Hence, in the passage from dim to bright light, the spectral sensitivity of the eye shifts toward the red. This is the Purkinje phenomenon.

A small central area of the human retina—the fovea—which subtends a visual angle of about 1.5°, contains only cones. Within this region, therefore, no Purkinje phenomenon is observed. Even in the dark-adapted eye, in which all peripheral responses are dominated by rods, the fovea retains the characteristics of pure cone vision.

The intrinsic sensitivities of rods and cones are
