BLAKISTON BOOKS

The Plant Sciences

CHESTER

Nature & Prevention of Plant Diseases
For the student majoring in field crops, horticulture, soils, entomology and related fields. Detailed treatment is given major diseases of leading crops. Lists of disease-resistant crop varieties, compositions of fungicides, trade names, working directions for practical measures, bibliographies, etc., are included.
By K. STARR CHESTER, Ph.D., Oklahoma Agricultural Experiment Station

LAURIE & KIPLINGER

Commercial Flower Forcing 4th Edition
This presentation serves the needs of the student of floriculture and of the commercial flower grower as well. New material on the nutrient level of greenhouse crops, soil sterilization, temperature control, humidity, use of growth promoting substances, pest control, etc., is included. Gravel culture is presented in a practical way in this edition.
By ALEX LAURIE, M.A., and D. C. KIPLINGER, M.S., Ohio State University

COLLINGS

Commercial Fertilizers, Their Sources and Use 3rd Edition
Written for use as a textbook, this volume is a source book of valuable information on all aspects of the manufacture and use of modern fertilizers.
By GILBEART H. COLLINGS, Ph.D., Clemson Agricultural College

SHOEMAKER

Small-Fruit Culture
This is an excellent text for the use of students interested in the cultural practices for small-fruits of commercial importance. A summary of the commercial distribution and production of each crop is given and an up-to-date discussion of varieties, cultural directions, control of insect and disease pests and methods of marketing is included.
By J. SHELDON SHOEMAKER, Ph.D., University of Alberta

HYLANDER & STANLEY

Plants and Man
This is a study of the living plant in its environment. It is designed for a semester survey course for students desiring a knowledge of the fundamentals of botany with the cultural and practical aspects. The basic concepts of morphology, physiology and taxonomy are given and ecological and economic aspects are stressed.
By CLARENCE J. HYLANDER, Ph.D., and ORAN B. STANLEY, Ph.D., Colgate University

THE BLAKISTON COMPANY  PHILADELPHIA 5, PA.
TRAVEL BY AIRPLANE

AIR-MINDED America will have ample aircraft in the near future for passenger travel, air express and mail. Nearly three times as many planes, with nearly six times the seating capacity, will be available for commercial uses as there were before the war when 409 new planes, now on order or on option, are ready for use. All 19 American airlines are increasing their facilities.

These 19 airlines of the United States expect to have 975 planes in their postwar fleets, it is revealed by the Air Transport Association of America. The planes will seat 36,180 passengers. They will provide greater speed, comfort and service than air passengers have ever experienced before. The additional planes will be new, not converted surplus military transports. It has been found, the association states, that the cost of conversion of military transport planes is greater than the cost of new equipment.

The giant of the new planes under order is a 320,000-pound craft, powered with six 5,000 horsepower engines, seating 204 passengers, and with a cruising speed of 340 miles an hour which will enable it to travel from New York to London in nine hours. A new Mare-type 165,000-pound flying boat, four-engined, carrying 106 passengers, will be able to cruise at over 200 miles an hour with a payload of 26,000 pounds for more than 3,000 miles.

Other new planes will have seating capacities ranging from 128 down to 14 passengers. Some will have cruising speeds up to 325 miles per hour. Several will weigh 100,000 pounds or over.

The new planes for overnight trips will have different combinations of staterooms, berths and reclining chairs. They will have separate rest rooms for men and women. Wherever necessary all planes will have pressurized cabins to maintain low-altitude conditions at "over-the-weather" heights, together with air-conditioning, thermostat temperature control, and individual ventilation. Windows will be larger and better arranged for observation. Electric stoves and refrigeration will permit the serving of satisfying meals.

Many scientific war developments that gave American war planes advantages over those of the enemies will be incorporated into the new civilian commercial aircraft. Among these are radar and electronic devices which permit landing under practically zero ceiling and visibility, and avoid risk of collision by enabling pilots to see other planes even in the thickest weather.

Among the new instruments is the Sperry "Gyrosoyn" compass, which is a gyro synchronized with a magnetic compass, giving much greater accuracy in navigation. Also there is a far-advanced, radio-aided system of airway traffic control, which will be vital when planes are landing and taking off six a minute at the larger airports.

ITEMS

QUACK grass or couch grass, notorious as an evil weed in America as well as in its native Europe, has a possible use in animal feeding, according to experiments reported in Nature. The research was performed by W. King Wilson, of the Harper Adams Agricultural College at Newport, Shropshire. Quack grass spreads over the ground by means of quick-growing runner-like stems or rhizomes. It can be slowed, though not stopped, by pulling these loose with a rake and stacking them up to dry. But this of course involves labor costs, and no offsetting use has ever been suggested for the dead weed growths. Mr. Wilson made chemical analyses of dried quack-grass rhizomes and found that the food substances in them compared favorably with those in ordinary hay. Then he substituted them for hay in the diet of a group of rabbits, and found that the animals thrive at least as well as those of a similar group kept on hay. Quack grass has a number of aliases, though they all sound more or less alike: quick grass, couch grass, twitch grass. To botanists the weed has only one name: Agropyron repens.

VEGETABLE produce shipped bedded down in finely granulated ice keeps its freshness, crispness and vitamin C content over a longer period, researches conducted in twenty-one colleges throughout the country have shown. "This method of refrigerating produce with snow-ice is like the protective effect of the late spring snows on vegetation," Charles F. Belshaw, research consultant of the National Association of Ice Industries, said recently, speaking as guest of Science Service, on the CBS program "Adventures in Science." Researches show that vitamin C retention in foods is essential in the retention of flavor and that keeping vegetables fresh through use of snow-ice will bring food to the dinner table so that it tastes better and is nutritionally better. Whole blood is shipped successfully across the Pacific in an insulated container in which the bottled blood is placed in racks around a large compartment of cracked ice, Mr. Belshaw said. Although temperatures inside planes in the Pacific often go as high as 130 degrees, this method keeps the blood to be used in treating the wounded at a temperature between 40 and 45 degrees which is necessary to keep it in usable condition.

That aluminas, the common oxide of aluminum, which is used as an essential ingredient of super-duty spark plug insulators, high-temperature refractories and insulators, in the field of electronics, has a lower melting point than previously supposed, has now been determined by the National Bureau of Standards. As a result of recent measurements made by R. F. Geller and P. J. Yavorsky, of the bureau staff, the melting point of alumina has been determined as lying within the range 3,630 to 3,690 degrees Fahrenheit. This is lower than the value usually quoted, 3,720 degrees. A reasonably accurate knowledge of the melting point of this material is important because of its wide industrial uses. Three samples containing over 99.9 per cent. of alumina were used in the tests. They were heated in an oxidizing atmosphere in an electric furnace, and the temperatures determined by means of an optical pyrometer.
New Wiley Publications

MANUAL OF CHILD PSYCHOLOGY
Edited by LEONARD CARMICHAEL, President and Director, Laboratory of Sensory Psychology and Physiology, Tafta College

A handbook of facts, established theories, techniques and methodology, which surveys the field of child psychology and evaluates the results of research in the psychology of human development. With nineteen separate chapters, each written by a recognized authority, the book is an advanced scientific manual, giving the most complete bibliographical survey of the literature on child development now available. It is written for serious students as well as for specialists in psychology and in such related fields as education, psychiatry, pediatrics, and medicine in general. August 1945.

Approximately 1459 pages; 6¾ by 9½; Probable price $6.00

ORGANIC SYNTHESSES. Volume 25
W. E. BACHMANN, Editor-in-Chief

Tested laboratory methods for preparing various organic chemical reagents in one-half-pound to five pound lots. This volume covers the preparations worked out in this past year. August 1945.

Approximately 120 pages; 6 by 9½; Probable price $2.00

ELECTRON OPTICS AND THE ELECTRON MICROSCOPE
By V. K. ZWORYKIN, G. A. MORTON, E. G. RAMBERG, J. HILLIER, A. W. VANCE; All at RCA Laboratories, Princeton, N. J.

This comprehensive book covers the electron microscope in all its phases. The material was chosen to fulfill a two-fold purpose. The first is to aid the present or prospective electron microscopist in understanding his instrument and in using it to greatest advantage; the second, to present systematically the practical and theoretical knowledge which must form the basis for further progress in electron microscope design. August 1945.

Approximately 747 pages; 5% by 8½; Probable price $10.00

PLANE AND SPHERICAL TRIGONOMETRY
By H. A. SIMMONS, Professor of Mathematics, Northwestern University

This greatly enlarged second edition begins with the trigonometric functions of the general angle, instead of the positive acute angle, and includes precisely the solid geometry needed for the study of spherical trigonometry. The book contains not only theoretical spherical trigonometry, but a large number of applications, including introductory navigation and certain elementary problems of astronomy. There are also chapters on Complex Numbers and the Slide Rule. Ready August 1945.

Second edition; With tables; 519 pages; 5½ by 8½; $3.00
Without tables; 389 pages; 5¼ by 8½; $2.25

YOUTH, MARRIAGE AND PARENTHOOD
By LEMO D. ROCKWOOD, Professor of Home Economics, and MARY FORD, Assistant Professor of Home Economics; Both at New York State College of Home Economics, Cornell University

Essentially a presentation of research findings, this study of the attitudes of three hundred and sixty-four university juniors and seniors toward sex education, premarital sex behavior, marriage, parenthood and divorce stresses the relation between the attitudes expressed and selected factors in the students' own backgrounds. The findings of the present study are related to previously made studies and to conditions as they actually exist. August 1945.

Approximately 279 pages; 5½ by 8½; Probable price $3.00

A Scientist's Experiences
in Medical Research

THE WAY
OF AN
INVESTIGATOR

By Walter B. Cannon, M.D.
George Higginson Professor of
Physiology, Emeritus, Harvard
University Medical School

Based on the varied experiences of a distinguished
career, and written with the modesty of a man de-
voted to the ideals of his profession, The Way of
an Investigator is both an autobiography and a
vivid picture of the laboratory in which today's
scientist carries on his researches.

Dr. Cannon draws on his observations and experi-
ences during forty years of medical research to dis-
cuss the qualifications of the laboratory scientist,
the circumstances he must face, the part hunches
play in his discoveries, and the controversial prob-
lems that arise through the errors and misjudg-
ments bound to occur along with the great achieve-
ments. The Way of an Investigator is fascinating
reading for everyone interested in scientific dis-
covery, valuable also for the light it casts on the
scientific way of life—its requirements, its pur-
poses, its problems, its keen satisfactions, and its
rewards.

W. W. NORTON & COMPANY
70 Fifth Avenue, New York 11
Uniformity of temperature, ±0.01°C. Temperature range from several degrees above cooling water to 60°C.

- This water bath is applicable to all laboratory operations requiring close regulation of temperature.

The central circulating and heating tower applies heat at the point of most rapid circulation of water. This efficient application of heat combined with the complete and rapid circulation of the bath medium eliminates stratification and creation of permanent gradients. Temperature uniformity throughout all areas of the bath is within ±0.01°C.

- Of the total surface area of the bath which is approximately 190 square inches, only 15 square inches is occupied by control equipment. All remaining space is entirely free for insertion of vessels.

- Except for the inlet and outlet tubes of the cooling coil, the wall of the Pyrex glass container is free of obstructions. Unrestricted observation of immersed vessels and measurement of capillary rise, liquid flow, etc., can be made easily and accurately.

A cooling coil is supplied and should be used when operating temperature are less than 3°C above average room temperature. A compact constant water level device attached to the wall of the container permits rapid overflow and replacement of water displaced by immersed apparatus.

Both central tower and cooling coil are easily removed for cleaning Pyrex glass container. The central circulating and heating tower merely lifts out of the bath.

S-84805 WATER BATH—Constant Temperature, Full Visibility, 0.01°C, Sargent, (Patent No. 2,037,993) Consisting of container, the central circulating and heating unit with motor, the Sargent mercurial thermoregulator, a cooling coil and constant level device, the Sargent zero current relay unit complete with cord and plug for connection to standard outlet and with cable for connection to the water bath. Temperature range from several degrees above that of the cooling water to about 60°C. Diameter, 16 inches; height, 10 inches; water depth, 9½ inches; temperature uniformity, ±0.01°C. For operation from 115 volt, 60 cycle single phase circuits.

- $150.00

S-84825 Dtho. But for 115 volt D.C. circuits........................................$155.00

S-84835 Dtho. But for 230 volt, D.C. circuits........................................$155.00

ACCESSORIES

S-84847 CONSTANT HEAT DEVICE. A simple, inexpensive unit to provide constant rate of flow of water passing through the cooling coil of a bath, thus minimizing variations in temperature uniformity caused by fluctuation in pressure of cooling water. Made entirely of Pyrex glass.

- Each .................................................. $6.00

S-71565 PUMP—Water Circulating. For circulating temperature controlling water from bath through water jacketed apparatus. Designed for suspension from rim of Sargent water baths. Flow rate, approximately 4 liters per minute. Produces circulation against a water head of 200 cm. For operation from 115 volt, A.C. 60 cycle circuits.

- Each .................................................. $45.00
THE CONTINUOUS FEED KYMOGRAPH

With Ink Writing Levers

A versatile and convenient instrument for making long paper kymograph records. The Continuous Feed Kymograph is particularly adaptable to the making of a series of similar records on different subjects, as for instance in the testing of potential student pilots under the Civil Aeronautics Authority college program.

Many important features of modern industrial recorders are found in this modern kymograph. Permanent ink records up to 90 feet can be made at any of eight speeds ranging from 2.12 to 456 centimeters per minute. Ink writing levers of all types are available.

No. A70-140 Continuous Feed Kymograph, without levers, for 110 volt, A.C. 175.00

PROCEDURES IN EXPERIMENTAL PHYSICS

By John Strong, Ph.D.

In Collaboration with H. VICTOR NEHER, Ph.D., ALBERT E. WHITFORD, Ph.D., C. H. CART-WRIGHT, Ph.D., Illustrated by ROGER HAYWARD, Architect

A practical handbook of the latest methods of procedure in experimental physics, successfully bridging the gap between theoretical training and laboratory practice. Of inestimable value to the experimental physicist and astrophysicist, it also contains the type of information that is useful for experimental scientists and scientific technicians. The material is well indexed, admirably selected and arranged, and is much more than a formulary for it contains sufficient theoretical material to make it suitable as the basis for an advanced university course in laboratory technique.

Public Health Officer: Medium size Class A medical school wants experienced Head of Department of Public Health and Director of Health in City and County of over half-million population. Education required: M.D. and Dr.P.H. degrees. Salary $7500. Box 182, "SCIENCE," Smithsonian Institution Building, Washington 25, D. C.

Instructor: General chemistry, laboratory, lecture and drill; organic chemistry, laboratory. Southwestern State University. Salary $2400-$2700 for ten months, according to experience. Please give complete qualifications and include recent photograph. Box 183, "SCIENCE," Smithsonian Institution Building, Washington 25, D. C.

Leading manufacturer of ethical products in Chicago has opening for man capable of directing all quality control work. Chemical training and experience in quality control as applied to process industries desired. Must have proven ability to organize and direct work of this type and to work well with other departments. Send details of training, experience, and personal data with first letter. Box 184, "SCIENCE," Smithsonian Institution Building, Washington 25, D. C.

Opportunities Available: (a) Professor and, also, assistant professor of bacteriology; department organized as division of college of agriculture; ample teaching and research equipment; West. (b) Young man to conduct toxicological work in pharmacology; should be well grounded in anatomy, preferably comparative anatomy; pharmacological research department, large company. (c) Research associate; university school of medicine; M.S. or Ph.D. degree in bacteriology or chemistry required. (d) Associate professor of biochemistry; preferably Ph.D. with minimum three years' teaching experience; South; $4200. (e) Instructor in bacteriology; Ph.D. experienced in teaching required; duties consist essentially of lectures and laboratory work in introductory bacteriology and a course relating to bacteriological technic; state university. (f) Pharmacologist or biochemist with therapeutic background for appointment with laboratories of experimental therapeutics conducted under university auspices. (g) Young man trained or experienced in protein or amino acid chemistry; must be capable of carrying out research and development work of high calibre with minimum of supervision; biological division, large company; East. (h) Chemists, bacteriologists, biologists, experienced scientists or recent college graduates eligible; research department one of the most important companies in the pharmaceutical industry; East. S7-3 Medical Bureau (Burneice Larson, Director) Palmolive Building, Chicago 11.

POSITIONS OPEN

Chemist, Ph.D., with background and experience in analytical or biological chemistry to take charge of analytical laboratory of an Eastern pharmaceutical house in vicinity New York City. Experience in drug control work desirable but not necessary. Give all details in first letter. Replies held strictly confidential. Salary according to experience and training. Box 177, "SCIENCE," Smithsonian Institution Building, Washington 25, D. C.

Opportunities Wanted: Young man who has done considerable work in the field of chemical therapeutics and pharmacology is available; Ph.D. in organic chemistry; experience includes considerable work in nutrition and food technology; now engaged in the field of proteins and amino acids; would like appointment permitting him to do some research in chemistry; for further information please write Burneice Larson, Director, Medical Bureau, Palmolive Building, Chicago 11.

Psychologist, linguist. Twelve years' college teaching experience; Ph.D.; reference. Fields: (1) Psychology. Special interest in psychology of language, thought and learning. (2) Languages (preferred field at present). Interested in methodology, phonetics and literature. In order of preference: Russian (good speaking ability); Spanish (bilingual); French. Box 180 "SCIENCE," Smithsonian Institution Building, Washington 25, D. C.

Indexing, proofreading, editorial service for technical or popular publications by scientific editor. Box 181 "SCIENCE," Smithsonian Institution Building, Washington 25, D. C.

Pure Distilled Water

- For Research Work
- Use in Sensitive Solutions
- Or Laboratory Determinations

Stokes Automatic Water Still produce distilled water of the highest quality. They are simple, rugged, efficient units, with purity of distillate thoroughly safeguarded by triple vapor baffles to eliminate entrainment, automatic "bleeder" device to remove concentrated impurities, large-area boiling chambers, solid block tin condenser tubes, Pyrex glass covers and other features.

No. 171 type stills (shown) are available in electrically-heated, also gas- and steam-heated models, from ½ to 1 1/2 g.p.h. capacity. Other stock models, up to 100 g.p.h. capacity. See your own laboratory supply dealer for complete information or write direct for new 24-page illustrated catalog.

Announcing

A NEW SERIES OF LaMOTTE WATER SOLUBLE pH INDICATORS

(Sulfon-phthalein) pH 0.2–9.6

In Sparkling Crystalline Form

New, highly purified products, forming instant solution with distilled water. No alkali to be added—no mixing in mortar—no filtering—no waiting. Simply add the proper quantity of the new LaMotte Indicator to distilled water in dilution flask and a brilliant solution of maximum sensitivity, stability, and tinctorial power results.

In new containers of 1 gram each.

Made exclusively by

LaMotte Chemical Products Co.

COLOR PHOTOGRAPHY

for Scientific and Technical Purposes

Color photography has many applications in scientific and technical fields. It has been used with success in the following:

Aerial photography  Medicine; Dentistry
Archaeology  Metallurgy
Botany  Meteorology
Documentary photography  Mineralogy; Petrography
Engineering  Photomicrography
Field studies of all kinds  Reproduction of works of art
Forestry; Geology  and museum pieces

The Eastman Kodak Company will be pleased to advise about the applications to specific problems of any of the following direct-color processes:

Kodachrome transparencies, and 16-mm. and 8-mm. motion pictures.
Kotavachrome Professional Prints—sizes 8x10 inches and 11x14 inches, from Kodachrome transparencies made on sheet Kodachrome Film.
Kodak Minicolor Prints—sizes to 11x14 inches, from miniature (24x36-mm. and 28x40-mm.) Kodachrome transparencies.
Kodacolor Film for roll-film cameras—provides color negatives from which color prints are made.

EASTMAN KODAK COMPANY, Rochester 4, N. Y.

Bacto-Agar

Bacto-Agar is a purified Agar prepared from domestic material. In the manufacture of Bacto-Agar extraneous matter, pigmented portions, and salts are reduced to a minimum, so that the finished product in the form of fine granules will dissolve rapidly, giving clear solutions.

Preserved behind glass—accessible on microfilm

Thousands of books and manuscripts, important in research, are resting safely in museums throughout the world—inaccessible, except through the medium of microfilm.

Government departments, libraries, and other institutions are now making microfilm records available in increasing quantities. Scholars, archivists, industrial organizations—all who consult reference material—appreciate the value of this convenient and economical means of studying the priceless records of mankind.

The moderately priced Spencer Microfilm Reader faithfully reproduces 35 mm. and 16 mm. microfilm at 15X magnification. It projects onto a shaded opaque screen an image so bright and clearly defined that material may be read for hours without discomfort. It accommodates either short lengths of film or standard 100-foot rolls on a rollfilm attachment.

Immediate deliveries are being made to those who have a priority rating of AAS or better. For complete information, write Dept. U3.
