

A necessary background for every agricultural student

CHESTER

THE NATURE AND PREVENTION OF PLANT DISEASES

By K. STARR CHESTER
Department of Botany and Plant Pathology
Oklahoma Agricultural Experiment Station

This modern text provides the material needed by students in an elementary course in plant pathology as part of the background for useful work in agriculture. For students majoring in field crops, horticulture, soils, entomology and related fields, this text is being used with success in introducing the essential features of the science and providing the detailed and specific directions needed on plant disease control. Lists of disease-resistant crop varieties, trade names as well as compositions of fungicides, and working directions for putting theory into practice are included.

Emphasis is given to the economic importance of each disease and the crop in which it occurs . . . to environment as it conditions the development of contagious disease . . . and to the epiphytological peculiarities of plant diseases.

Chapters are sufficiently independent that their order can be modified to suit any particular needs.

207 Illustrations. 584 Pages. $4.50

Reviewers say:—

"Excellent discussions of methods, parasitism, etiology, epiphytology, quarantine and immunity."—Bios

"It goes into a thorough discourse on the latest means of control or eradication."—Jour. American Arboriculture

"Well written, carefully organized and a valuable contribution to its field."—Quarterly Review of Biology

A Selected List of
Wiley Books in Earth Sciences

OUTLINES OF PHYSICAL GEOLOGY
By Chester R. Longwell, Henry Barnard Davis
Professor of Geology, Chairman of the Department; Adolph Knopp, Sterling Professor of
Geology, and Director of Graduate Studies; and
Richard F. Flint, Professor of Geology; all
at Yale University
Second edition; 1941;
381 pages; $2.75

OUTLINES OF HISTORICAL GEOLOGY
By the late Charles Schuchert and Carl O.
Dunbar, Professor of Paleontology and Stratig-
raphy, Director of Peabody Museum, Yale Uni-
versity
Fourth edition; 1941;
291 pages; $2.50

OUTLINES OF GEOLOGY
By Chester R. Longwell, Adolph Knopp, Rich-
ard F. Flint, the late Charles Schuchert
and Carl O. Dunbar
Second edition; 1941;
672 pages; $4.00

TEXTBOOK OF GEOLOGY
Part I—Physical Geology
By Chester R. Longwell, Adolph Knopp and
Richard F. Flint
Second edition; 1939;
543 pages; $3.75

TEXTBOOK OF GEOLOGY
Part II—Historical Geology
By the late Charles Schuchert and Carl O.
Dunbar
Fourth edition; 1941;
544 pages; $4.00

ROCKS AND ROCK-MINERALS
By the late Louis V. Pierson and Adolph
Knopp
Second edition; 1926;
426 pages; $3.50

PRINCIPLES OF STRUCTURAL GEOLOGY
By Charles M. Nevin, Professor of Geology,
Cornell University
Third edition; 1942;
320 pages; $3.50

DANA'S SYSTEM OF MINERALOGY
Rewritten and enlarged by Charles Palache,
the late Harry Breman, Clifford Frondel; all
at Harvard University
Volume I—Elements, Sulfides, Sulfosalts, Oxides.
Seventh edition; 1944;
834 pages; $10.00

DANA'S MANUAL OF MINERALOGY
Revised by Cornelius S. Hurlbut, Jr., Associ-
ate Professor of Mineralogy, Harvard University
Fifteenth edition; 1941;
480 pages; $4.00

INDEX FOSSILS OF NORTH AMERICA
By Harry W. Shimer, Professor Emeritus of
Paleontology, and Robert R. Shrock, Associate
Professor of Geology; both at Massachusetts
Institute of Technology
1944; 537 pages; $20.00

EARTH SCIENCES
By J. Harlen Bretz, Professor of Geology,
University of Chicago
1940; 260 pages; $5
College edition $1.75

ECONOMIC MINERAL DEPOSITS
By Alan M. Bateman, Professor of Economic
Geology, Yale University
1942; 888 pages; $6.50

ERUPTIVE ROCKS
By S. James Shand, Professor of Geology,
Columbia University
Second edition; 1943;
444 pages; $5

X-RAY CRYSTALLOGRAPHY
By M. J. Buergser, Associate Professor of Min-
eralogy and Crystallography, Massachusetts In-
stitute of Technology
1942; 531 pages; $6.50

JOHN WILEY & SONS, INC., 440-4th Ave., New York 16, N. Y.
High praise for this new and fundamental textbook for the introductory course.

"Altenburg's GENETICS is excellent. It is up to the minute, reflecting actual current usage throughout in ideas, explanations, and terminology. The diagrams are clear and apposite, representing successfully just the matters which are most difficult (or impossible) to put into words. This text, perhaps better than any other, combines richness in technical detail with the simplicity of explanation needed by students beginning the study of genetics."

—H. M. Parshley, Smith College

"I like the sections on heredity and development and genetic basis of evolution. These seem to me better than in most texts."

—Edward McCrady, Jr., University of the South

"The clear concise explanations should enable a beginning student of genetics to understand the principles and the mechanics involved. The complete summaries for each chapter add to the usefulness and adaptability of the text."

—Wanda S. Hunter, University of Arizona

"... by far the best presentation of modern genetic theory yet to appear. I shall use it this fall."

—Paul A. Warren, Tufts College

452 pages 150 illustrations $3.20

**Experimental Spectroscopy**

Ralph A. Sawyer, Professor of Physics, University of Michigan

"This device (the spectroscope) has unlocked even more secrets of nature than have its companions, the telescope and the microscope," George R. Harrison of the Massachusetts Institute of Technology said in a recent issue of Science.

**Experimental Spectroscopy** will show you how to use your equipment most effectively and efficiently whatever your specialization is.

Here in one volume you will find all the basic information you need for the selection and use of spectrographic equipment. Ample theoretical material is combined with practical suggestions.

1. The various types of light sources are thoroughly discussed.
2. The general principles of spectrographic equipment are explored in practical terms.
3. More than a hundred line drawings and diagrams add to the clarity.
4. The care, cleaning, and testing of equipment are covered in detail.

323 pages 6 x 9 in. College list $3.75

A FASTER INFRARED PLATE

The Eastman Spectroscopic Plate, Type 1-Z, has been improved to give it approximately five times the sensitivity of the previous plate at about λ10,800Å. It also has somewhat finer granularity. The increased sensitivity is obtainable only with correct hypersensitizing. The improved plate offers a valuable aid to spectrography out to the limit to which it is now possible to photograph.

More than one hundred kinds of Eastman Spectroscopic Plates are available. Detailed information on their properties can be found in the booklet, Photographic Plates for Use in Spectroscopy and Astronomy (Fifth Edition), a copy of which will be sent free on request.

The Tested Ration for Laboratory Rabbits and Guinea Pigs...

PURINA RABBIT CHOW

Leading laboratories have found Purina Rabbit Chow (complete ration) to be the preferred ration for both rabbits and guinea pigs. For rabbits, it is a complete ration. For guinea pigs, it needs supplementing only with ascorbic acid or vitamin C. Rabbit Chow (complete ration) is a stable food, economical and easy to feed. It is available in two forms - meal and checkers (compressed pellets). Rabbit Chow Checkers are particularly recommended when accurate control of feed intake is essential.

Write for detailed information. Also ask about Laboratory Chow for laboratory rats, mice, hamsters, dogs, cats and monkeys.

THE W&T CONSTANT SPEED MOTOR MECHANISM
meets precision standards

Type FA-121 for 12 volt operation
Type FA-122 for 24 volt operation

FOR coding, keying, monitoring, programming, or other timing applications this instrument, operating at a constant speed, regardless of voltage variations as great as ±20%, permits accurate timing to hundredths of a second. With a current input of only three milliamperes, the motor delivers 1800 grams inches per minute, a feature of especial importance in battery powered systems.

Interchangeable cams permit the use of any desired timing characteristic for two or more separate circuits.

STAPHYLOCOCCUS AUREUS 60,000 X

as seen with the RCA Electron Microscope

This picture, reproduced from an electron micrograph, made with an RCA Electron Microscope by Dr. Ralph W. G. Wyckoff and Dr. Robley C. Williams at the University of Michigan, is a striking demonstration of the fact that most bacteriologists have never really seen Staphylococcus aureus.

That is because it is not possible to see this organism in detail with even the best optical microscope. The same difficulty exists in all sciences when very small organisms, particles, or surface characteristics, must be studied.

The vastly greater detail sharply revealed by the RCA Electron Microscope has already corrected many erroneous ideas. Important advances in pure science, and improvements in industrial products and processes, have resulted.

That is why RCA Electron Microscopes are rapidly becoming standard equipment in more and more institutional and industrial laboratories. RCA Electron Microscope specialists will gladly discuss such a project with you, with respect to either the "Universal" model or "Console" model.
THE CARVER LABORATORY PRESS

Standard for Research and Development

The Carver Press is designed to fill a vital need in laboratory equipment. Small (only 125 lbs.) but powerful, it provides accurately controlled pressures up to 10 tons. Carver Press accessories include electric and steam hot plates and test cylinders or molds. Additional interchangeable equipment includes bearing plates, cage and filtering equipment, etc. Send now for complete catalog giving details about Carver Press and applications. Prompt Deliveries.

NEW WAY to look at
MEDICAL SLIDES and MICROFILM
Insert 2 x 2 slides in the new Kimac Viewer at top —strip film slides easily through special grooves from side to side.

NO OTHER VIEWER HAS ALL THESE FEATURES
1. Focusing adjustable, removable eyepiece.
2. 4 x magnification.
4. Brilliant 3-dimensional depth effect.
5. For 2 x 2 slides, 35mm and Bantam 41m, X-rays etc.
6. Accessory 10 x eyepiece $3.00. Highly recommended for microfilm or greater magnification of slides.
7. Optically ground, polished lens.
8. Convenient, detachable handle.

WE WANT A PHYSICIST

To join our expanding research and development staff in Washington not later than Jan. 15. We prefer a man with recent experience on one of the Manhattan Projects. This man should be able to

- handle the mathematics that goes with advanced nuclear physics.
- visualize practical applications resulting from his research.
- direct others in carrying out his ideas.

To the right man we can offer a good starting salary and plenty of opportunity. If you want to be associated with a young organization and young men who are going places, send us a detailed letter of application about your education, experience, publications and/or patents, marital and draft status, and salary expected, with a recent photo.

Box 312A, SCIENCE

PHARMACEUTICAL CHEMIST

Large midwestern pharmaceutical firm needs a Ph.D. or the equivalent to direct formulation of new pharmaceutical products. Very responsible position pertaining to the development of new pharmaceutical dosage forms. Men with experience in the manufacture of tablets, ointments and related products will be given preference.

Box 315, SCIENCE
Small in size, but big in performance, electronic tubes like the one above have made possible camera-size radios, hearing aids that fit the palm of your hand, "walkie-talkies," and many other developments.

The originator of these tubes, Hytron Radio and Electronics Corporation, overcame control and inspection difficulties (spacing tolerances in some tubes are as small as .0008 in.) by extending the vision of their workers with Spencer Stereoscopic Microscopes.

Providing greatly enlarged, clearly defined, three-dimensional images, these microscopes offer advantages to all who must study small details. For descriptive literature write Dept. Z1.
