For your course in **ORGANIC CHEMISTRY**

**A BRIEF COURSE IN ORGANIC CHEMISTRY**
By Reynolds C. Fuson, Ralph Connor, Charles C. Price and Harold R. Snyder

An elementary textbook and laboratory manual. The fundamental concepts and the more important types of organic compounds are discussed as early as possible, and are constantly used throughout the remainder of the book.

1941; 248 pages; 6 by 9½; $2.50

**ORGANIC CHEMISTRY**
By Reynolds C. Fuson and Harold R. Snyder

Designed for introductory courses, the material is divided into two parts. Part I covers the principal types of organic compounds, and Part II the more advanced aspects of these compounds, with particular emphasis on the use of organic reactions in synthesis.

1942; 506 pages; 6 by 9½; $3.50

**ORGANIC CHEMISTRY**
By Henry Gilman

New in this edition are: the reactions of aliphatic hydrocarbons; synthetic polymers; catalytic hydrogenation and hydrogenolysis; organic sulfur compounds; aliphatic fluorides; the chemistry of the porphyrins; chlorophyll; and the redistribution reaction. In two volumes, available separately.

Second edition; 1943; 2036 pages; 6 by 9½; $7.50 per volume

**AN INTRODUCTION TO ORGANIC CHEMISTRY**
By Ira D. Garard

A revised and somewhat enlarged edition of a well-known book for brief introductory courses. The simplicity of the laboratory apparatus and manipulation has been retained.

Second edition; 1940; 389 pages; 6 by 9½; $3.00

**AN INTRODUCTION TO ORGANIC CHEMISTRY**
By the late Alexander Lowy, Benjamin Harrow and Percy Applebaum

This new edition, with 50 additional pages, covers recent developments and emphasizes the connecting links that bind organic chemistry to medicine, dentistry, pharmacy, and other biological sciences.

Sixth edition; 1945; 448 pages; 5½ by 8½; $3.50

**TEXTBOOK OF ORGANIC CHEMISTRY**
By George Holmes Richter

A comprehensive, teachable book, revised to include current subjects of importance. Excellent as the foundation for a solid course for beginning students.

Second edition; 1943; 760 pages; 6 by 9½; $4.00

---

**LABORATORY MANUALS**

**Laboratory Outlines and Notebook for Organic Chemistry**
By Cecil E. Boord, Wallace R. Brode and Roy G. Bosseret

1940; 241 pages; 8½ by 10½; Paper; $1.75

**Laboratory Book of Elementary Organic Chemistry**
By the late Alexander Lowy and Wilmer E. Baldwin

Second edition; 1934; 182 pages; 8½ by 11½; $2.50

**Laboratory Manual of Organic Chemistry**
By Harry L. Fisher
Fourth edition; 1938; 412 pages; 5½ by 8½; $2.75

**Laboratory Manual of Elementary Organic Chemistry**
By George Holmes Richter
1940; 128 pages; 6 by 9½; $1.25

**The Systematic Identification of Organic Compounds**
By Ralph L. Shriver and Reynolds C. Fuson
Second edition; 1940; 312 pages; 6 by 9½; $2.75

JOHN WILEY & SONS, Inc., 440-4th Ave., New York 16, N. Y.
“A more-than-adequate text . . .”

In writing this new volume, the author, a successful teacher for many years, has kept the student constantly in mind. Fundamentals as well as recent developments are presented in a clear and straightforward manner.

The book brings the subject matter to the student as an integral part of the practice of medicine—and its importance in the study of clinical problems.

Blood chemistry, function tests and other clinical phases are stressed and the book aims to explain many physiological phenomena biochemically. Although organic and physical chemistry are not omitted, they are not stressed as greatly as the physiological, pathological and nutritional phases.

Dr. Kleiner levels his material so that the text may be used by elementary or advanced students. The text bridges the early school years and the clinical years.

THE C. V. MOSBY COMPANY
3207 Washington Boulevard
St. Louis 3, Missouri

Gentlemen: Send me a copy of Kleiner's

HUMAN BIOCHEMISTRY, $6.00

Name

Address
The Klett-Summerson Photoelectric Colorimeter has proved itself to be more rapid and accurate than any visual colorimeter. Because it is unnecessary to prepare standards every time an unknown is run, this photoelectric instrument saves time and reagents.

It operates directly from 110 volt A.C. or D.C. lighting circuit, requires no storage batteries or current regulators, is unaffected by voltage fluctuations. All measurements are controlled by a single knob. The reading scale is 12 inches long with an inherent precision of measurement of 1/2 of 1 percent of full scale. Scale readings are directly proportional to the concentration for most colorimetric procedures, e.g., if a given concentration reads 150 on the scale twice as much will read 300, half as much will read 75, etc.

Available in two models: No. 5410, designed for 12.5 mm. diameter test tubes only, and No. 5411, accommodating rectangular cells up to 40 mm. solution depth or, by means of an adapter, calibrated test tubes.

5410—KLETT-SUMMERSON PHOTOELECTRIC COLORIMETER. Test Tube or Clinical Model. Complete with two graduated test tubes, manual of instructions, two color filters, filter holder, storage box for filters. For operation directly from 110 volt lighting circuit 148.00

5411—KLETT-SUMMERSON PHOTOELECTRIC COLORIMETER. Glass cell or Industrial Model. Complete with one fused rectangular solution cell, instruction manual, two color filters, filter holder, storage box for filters. For operation directly from 110 volt lighting circuit 183.00

Available for prompt shipment from stock

LABORATORY APPARATUS AND CHEMICALS
PERSONNEL PLACEMENT

A New Advertising Service of Science

In February, 1945, Science inaugurated a classified advertising section under the title In The Market Place to carry short notices about supplies, equipment, books, and positions open and wanted. Nearly a year has passed and the use which the readers have made of this section amply justifies its continuance. Now, in recognition of the growing need for one central location which can be used by all scientists and the universities and industrial organizations for personnel matters, Science announces that it will begin a separate classified section in the March 1, 1946 issue known as Personnel Placement. In The Market Place will continue as a companion section for announcing needs for and availability of materials, supplies, and books. The rates for both sections will be the same, 10 cents a word, with a minimum of $2.00, cash with order.

Many scientists are now being demobilized from the armed forces. Coincident with this, the colleges and universities, because of unprecedented enrollments, are facing an acute shortage of instructional personnel. Industry, too, has great need for scientific personnel for the development of new products. Science because of its wide circulation and wide coverage of all branches of scientific activity is a logical medium for publicizing notices of positions open and wanted.

The March 1 issue of Science presents an excellent opportunity for starting this service, since the issue will be devoted largely to the meetings to be held in St. Louis, March 27–30. Scientists looking for positions and organizations planning to have representatives at the meetings to discuss personnel problems will find it particularly advantageous to publish notices in this issue and those of March 8 and 15.

Notices which are scheduled to appear in all three issues may use the following special box addresses in place of the usual one at the regular box charge of 8 words:

For individuals:  "Will be attending St. Louis meeting. Arrange interview through Box . . . , Science."

For organizations: "Representative will be in attendance at St. Louis meeting. Arrange interview through Box . . . , Science."

All orders and copy to be inserted in the first issue of Personnel Placement must reach the Association's Advertising Department, Massachusetts and Nebraska Avenues, N. W., Washington 16, D. C., not later than February 15, 1946.
KODAK MATERIALS for The Photography of Cathode-Ray Tube Traces

Photography of the stationary or transient patterns of cathode-ray tube traces is often necessary for more careful study of such records. The technique and the choice of a suitable film or plate for this work are influenced by several factors such as color of the trace, persistence time, and type of pattern.

The new Kodak booklet The Photography of Cathode-Ray Tube Traces contains useful data on many aspects of this subject, including the effective speeds of 26 Kodak materials to illumination from blue and green cathode-ray screens. Copies obtainable on request.

* * *

At left—photography of cathode-ray tube traces of the synchronization of a camera shutter and a flash bulb: A, good synchronization; B, poor synchronization.

Speed of shutter under test 0.01 second. Photograph made with diaphragm at f/4.5. Kodak Verichrome Film Pack used. Dots represent 1-millisecond intervals. Oscillograph: DuMont Model 247 with a SCP5 Tube.

KemROCK GIVES! —a Valuable Feature of Kewaunee Laboratory Furniture

The KemROCK working surfaces of Kewaunee Furniture successfully resist acids, alkalis and solvents. Being "rock-hard" they also resist abrasion, and both physical and thermal shocks. KemROCK gives you a big plus value. Add to this Kewaunee's streamlined beauty, working conveniences and fine workmanship and you will understand why America's Finest Laboratories are Kewaunee Equipped. Address—

NYSSCO BIOLOGY CHARTS
“Pollination and Fertilization”
Size 36" x 50", cloth-backed

ILLUSTRATING with six large, beautifully drawn figures, self pollination (Violet), and cross pollination (1) by insects (Iris) and (2) by wind (Corn); and illustrating with five clear and accurate figures, stages of fertilization in plants from the germination of the pollen tube to the fusion of the egg and endosperm nuclei in the embryo sac. An excellent and useful chart.

ONE of our series of 78 carefully planned charts. The series is divided into four groups, (a) Biological Principles (including 14 charts for Genetics), (b) Botany, (c) Zoology, (d) Health and Disease.

THESE charts were planned with the cooperation of the Chart Committee of the New York Association of Biology Teachers. Unusual and painstaking care was exercised with regard to subject treatment, scientific accuracy, and artistic presentation.

With eyelets—$3.25 With rods—$3.75

NOW a precision made ration...

PURINA LABORATORY CHOW

For years scientists have depended upon precision instruments...exact measurements. Now you can depend upon a NEW feed, Purina Laboratory Chow. It is especially made for laboratories, on a constant formula, thoroughly proved for good reproduction, lactation and condition. For rats, mice, hamsters, dogs, cats, monkeys. Please mail coupon for full analysis and generous sample.

PURINA MILLS St. Louis 2, Mo.

PURINA MILLS, 1704 Checkerboard Square, St. Louis 2, Mo.
Send new handbook giving complete analysis of Laboratory Chows. Also a sample.

EVAPORATED METAL FILMS CORPORATION
ITHACA, NEW YORK

It's All Done With Mirrors!

If you are a maker of OPTICAL INSTRUMENTS of PREC-
SION you will be interested in FIRST-SURFACE mirrors from
ITHACA. We make only one quality—the highest—under the
names of CHROLUMINUM for opaque mirrors and DUOLUX
for semi-reflecting ones. Our
mirrors meet the highest specifica-
tions in respect to brilliance, hard-
ness, and permanence. When-
ever you have an instrument
problem involving the reflection
or partial transmission of light,
think of EVAPORATED Metal
Films at ITHACA.
THE VERTEBRATE EYE
by Gordon L. Walls

"... to be kept always within reach ... deserving of the highest commendation ... a standard reference wherever and whenever information on the eye ... is needed." L. B. Arey, in Anatomical Record.

"Should be read by all biologists, including medical men, interested in visual problems." H. E. Root, in Nature.

"Never before has so much light been shed at one time on an animal organ..." Carl L. Hubbs, in American Naturalist.

785 pages, 483 illustrations, 3 in color.

$6.50 postpaid.

EDITORIAL SERVICES

Editing, proofreading, indexing done for technical or popular publications by scientific editor. Box 181, SCIENCE.

POSITIONS WANTED

BELGIAN ENTOMOLOGIST

Wants to work in Europe for an American institution. Twenty years experience in entomological and ethnological (Cavernicolus) researches. Can furnish highest references. Correspondence invited and may be initiated through Box 350, SCIENCE.

Bacteriologists, Biologists, Physiologists, Chemists, Pharmacologists. Phyleas—With your letter of introduction, let us help you secure a position. Our service, established 1906, is nationwide. Write us today. All information confidential.
A. W. SCHIMMEL BUREAU, 30 North Michigan, Chicago 2.

Biologist, Ph. D., Brown University; genetics. Fourteen years' college teaching; several publications. Desires position which will include teaching genetics. Available September, 1946. Box 344, SCIENCE.

Organic Chemist, Ph. D. Desire teaching position in small college or university. At present engaged in industrial research—directing the research activities of small group of chemists and technicians. Excellent academic and industrial record. Good background in physics and mathematics. Age 30. Box 313, SCIENCE.

General Zoologist—Ph. D. desires teaching or research position. Experienced teacher. Most of training in general physiology and invertebrate zoology. Sigma Xi. Age 30; single; will go anywhere. Leave on terminal leave after 3 years Army service as Aviation Physiologist. Minimum salary $2,500. Box 342, SCIENCE.

Opportunities Wanted—Chemist; B.Sc. (science, mathematics), M.Sc. (analytical chemistry, physical chemistry), Ph.D. (chemical physics, analytical chemistry); four years research in analytical and physical chemistry; eight years teaching experience; for further information please write BERNICE LARSON, Director, The Medical Bureau, Palmolive Building, Chicago 11.

POSITIONS WANTED

The California Medical Bureau, Agency for scientific and lay personnel in medicine, biology, chemistry, physics, and allied sciences, supplies teachers, research workers, laboratory diennes, skilled office help. Prompt service. Registration free. Your patronage respectfully solicited. THE CALIFORNIA MEDICAL BUREAU, 385 East Colorado Boulevard, Pasadena 1, California.

POSITIONS OPEN

WE NEED A ZOOLOGIST

Our organization has an immediate opening for a zoologist who is interested in an opportunity in the preserved materials department of a prominent scientific supply house in the east.

The man we want—and this would be an excellent opportunity for a returned veteran—should have basic training in comparative anatomy and preferably some experience in the injection of circulatory systems of common laboratory animals.

Please send us a complete resume of your experience and education, salary expected and availability date. A recent photograph would be helpful. Box 338, SCIENCE.

Pharmacologist—Leading Middle Western manufacturer of ethical pharmaceuticals offers exceptional opportunity to Ph.D. or M.D. with experience in laboratory pharmacology or experimental therapeutics. Full-time research under ideal laboratory conditions in Pharmacology Department now being greatly expanded. Write full details of experience, educational background, salary expected, etc. Send photograph if available. Box 327, SCIENCE.

Organic Chemist—Ph.D. with several years synthetic experience in drug field, able to conduct and supervise original research. Eastern location. Submit details of education, experience, and salary expected. Reply Box 346, SCIENCE.

Assistant Pharmacologist—Ph.D. or M.D. experienced in drug field and having knowledge of biochemical techniques. Eastern location. Submit details of education, experience, and salary expected. Reply Box 347, SCIENCE.

Pharmaceutical Technician—Female, B.S. or M.S. preferred. Well trained and experienced in biology, physiology and histology. Eastern location. Submit details of education, experience, and salary expected. Reply Box 348, SCIENCE.

Opportunities Available—(a) Assistant pharmacist; mental hospital, clinic; state hospital; $300-$375, maintenance; East. (b) Pharmaceutical chemist or pharmacist; duties consist of working with chemical and biological research divisions, medical research, sales and promotion departments; should be able to improve product formulation, find new uses for products; East. (c) Young physician interested in becoming associated in pharmaceutical industry; duties consist of research development of technical literature and serving as counselor on pharmaceutical medications; East. (d) Al- lergist to become associated with small group; duties include directing staff of five technicians; (e) Bacteriologist; research department; large manufacturing company; some supervision; Middle West. (f) Research librarian; training in chemistry desirable; East. (g) Histologist; department of pathology; fairly large hospital located in university medical center; $3,000; East. (h) 1-4 Medical Bureau (BURNICE LARSON, Director), Palmolive Building, Chicago 11.
FS All-Glass Stirrer

Holds vacuum or pressure without mercury seal

Differences as great as 60 mm between inside and outside of flask cause no leakage.

Apparatus, as supplied, consists of bearing and shaft precisely fitted to each other.

Recommended for all types of chemical work, particularly for organic and electro-chemical research, since no problem of chemical effect of the stirrer or its seal arises. The reaction mixture is in contact with glass only.

At all leading Laboratory Supply Dealers.

To measure is to know

Twenty-five years ago, one standard of sound power was the ticking of a watch, another was the clicking of two coins; and the measure was how far away the tick or the click could be heard. That test was made in measuring people's hearing, a field of interest to the Bell System scientists because the ear is the end-point of every talking circuit.

Accustomed to exact measurements, Bell scientists proceeded to develop a method of measuring hearing-sensitivity in terms which could be precisely defined and reproduced. After plotting hundreds of runs like those above, they decided on a particular sound intensity, representing an average "threshold of hearing," as a starting point.

Sounds delivered by a telephone line had been evaluated by listeners who compared their loudness with that of a standard source. There were wide variations in ears, so engineers replaced them by electrical instruments. When later their associates developed the Western Electric radio and public address systems, measuring circuits were promptly forthcoming. A noise meter followed, used in quieting airplanes and automobiles.

"Through measurement to knowledge," said a famous Netherlands scientist. The principle finds wide application in Bell Laboratories, whether the quest be for a way to measure sound, a new kind of insulation, or more economical telephone service.

Hearing was first measured reliably by engineers in the Bell Telephone Laboratories.

For good reception, program loudness must stay within certain limits. Volume-meters help to hold it there.

From the throat of this mighty air-raid siren comes the loudest sustained sound ever produced.

Visible Speech, result of telephone research, turns sound into "pictures" that the deaf can read.

BELL TELEPHONE LABORATORIES Exploring and inventing, devising and perfecting for continued improvements and economies in telephone service.
MEET EVERY METALLURGIST'S NEEDS

Now you can select a metallurgical microscope that exactly fits your needs, and in addition provides the mechanical advantages for which Spencer Microscopes have long been famous.

For these new instruments offer a wide choice of equipment and many outstanding features for convenience and speed in operation:

- **BRILLIANT, UNIFORM ILLUMINATION** from a newly designed vertical illuminator that is simple to operate, sturdy and always cool enough to handle. It has a unique coated reflector for maximum efficiency . . . built-in intensity control . . . quick change nosepiece.

- **LARGE, STURDY, RESEARCH-TYPE STAND** with micrometer screw fine adjustment . . . interchangeable body tubes . . . grooved bearing surfaces for long wear.

- **VARIETY OF EQUIPMENT** for teaching, routine examination, and research . . . eleven standard combinations of stages, optics, illuminators, and body tubes (fixed or adjustable monocular and inclined or vertical binocular).

- **WIDE RANGE ADJUSTABLE STAGE** has both slide and rack and pinion adjustments to handle unusually large or small specimens.

For literature describing the new Spencer Metallurgical Microscopes in detail, write dept. B-1 today.
