BAUSCH & LOMB BALOPTICON
MODEL B

This Balopticon, for use with standard lantern slides, is in production for your use. It is moderately priced and provides an economical means of illustrating lectures and group discussions. Its optical and illuminating systems are of exceptionally high quality and permit large, brilliant, clear screen pictures critically sharp from one edge of the screen to the other. Because of its sturdy construction and ease of operation it is particularly well adapted for use by inexperienced operators and will provide long, trouble-free service. Write for complete information. Ask for Catalog E-11. Bausch & Lomb Optical Co., Rochester 2, N. Y.
To bring you up-to-date on Wiley Books

Agriculture

Vegetable Production and Marketing
By Paul Work, Cornell University
Presents the necessary theory of vegetable growing, emphasizes the practical aspects of modern vegetable production. 1945. 559 pages. $2.75.

Fundamentals of Soil Science
By C. E. Millar and L. M. Turk;
Both at Michigan State College
A comprehensive, practical treatment of present knowledge of soils. 1945. 462 pages. $3.75.

Biological Science

Essentials of Human Embryology
By Gideon S. Dodds, West Virginia University
Extensively revised, this well-known textbook contains the most recent advances in embrological knowledge. Third Edition. 1946. 314 pages. $4.00.

Introduction to Parasitology
By Asa C. Chandler, The Rice Institute
This standard textbook, emphasizing biological aspects, now contains the many advances made in the study of parasites in the past few years and discusses the possibility of new parasites in this country as a result of the recent war. Seventh Edition 1944. 706 pages. $5.00

Stream Sanitation
By Earle B. Phelps, Columbia University
A thorough study of basic principles of stream sanitation, remedial control measures and allied problems. Detailed and specific data on biological, chemical and bacteriological aspects. 1944. 276 pages. $3.75.

Elements of Biology
By P. D. Strausbaugh, West Virginia University; and B. R. Welmer, Bethany College
Stresses basic principles and develops factual material along functional lines. A broad perspective of biology adapted for a one-semester course. 1944. 461 pages. $3.25.

A New Manual for the Biology Laboratory
By B. R. Welmer, Bethany College; and Earl L. Core, West Virginia University
This manual, adaptable to a variety of courses, contains carefully selected exercises illustrating basic principles. It is intended to accompany the Strausbaugh-Welmer textbooks or any general biology textbook. 1944. 213 pages. $2.00.

Chemistry

An Introduction to Organic Chemistry
By the late Alexander Lowy; Benjamin Harrow and Percy Apfelbaum, both at City College, College of the City of New York
Revised and expanded, this new edition includes such topics as resonance, substitution in the benzene ring, alicyclic ring structures, and high polymers. The chapter on terpenes has been rewritten, and the list of references revised. Sixth Edition. 1945. 463 pages. $3.50.

JOHN WILEY & SONS, Inc., 440 4th Ave., New York 16, N. Y.
To bring you up-to-date on Wiley Books

General Chemistry
By Horace G. Deming, University of Nebraska

Completely rewritten, this textbook includes the recently developed aspects of chemistry along with interesting applications to modern industry. Fifth Edition. 1944. 706 pages. $3.75.

Second Year
College Chemistry
By W. H. Chapin and L. E. Steiner;
Both at Oberlin College

This latest edition contains new material on atomic radii, distribution of the velocities of molecules, crystalline solids, the chemical bond and other important subjects. Fifth Edition. 1943. 582 pages. $3.75.

Exercises in
Second Year Chemistry
By W. H. Chapin, W. H. Bromund and L. E. Steiner;
All at Oberlin College

The Theory of Resonance
and Its Application to
Organic Chemistry
By G. W. Wheland, University of Chicago

A comprehensive survey of the subject for the organic and physical chemist. 1944. 316 pages. $4.50.

Quantum Chemistry
By H. Eyring and J. Walter, both of Princeton University, and G. E. Kimball, Columbia University

An advanced treatment, giving a well-developed explanation of the theory with wide applications. 1944. 364 pages. $5.00.

Chemical Spectroscopy
By W. R. Brode, The Ohio State University

An elementary textbook, revised and expanded, which deals with spectrographic analysis of materials and other applications of spectroscopy. Second Edition. 1943. 679 pages. $6.50.

Exercises in General Chemistry
and Qualitative Analysis
By H. G. Deming and Saul B. Arenson, University of Cincinnati

Offers a wide range of experiments with accurate and clearly written directions and comments. Fifth Edition. 1945. 300 pages. $1.90.

Organic Reactions. Volume II
Edited by Roger Adams, Editor-in-chief, and associate editors

Well-organized critical discussions of widely-used organic reactions. The material was prepared by a group of outstanding men. 1944. 461 pages. $4.50.

Textbook of Organic Chemistry
By George Holmes Richter, The Rice Institute

A comprehensive, teachable book, revised to include subjects of current importance. Excellent foundation for a solid course for beginning students. Second Edition. 1943. 760 pages. $4.00.

Outlines of Physical Chemistry
By the late Frederick Getman; Revised by Farrington Daniels, University of Wisconsin

This edition has a more advanced treatment in first part of book, revised chapters on phase rule and on thermodynamics, additional problems and worked-out examples. Seventh Edition. 1943. 691 pages. $3.75.

Elementary
Quantitative Analysis
By C. J. Engelder, University of Pittsburgh

Thoroughly revised, this is a compact and simple presentation of the subject with problem sets and questions. Theory is correlated with laboratory work. Third Edition. 1943. 312 pages. $2.75.

Elementary
Qualitative Analysis
By B. E. Hartsuch, Michigan State College

A special feature is the detailed, step-by-step solution of problems. 1943. 294 pages. $2.50.

JOHN WILEY & SONS, Inc., 440-4th Ave., New York 16, N. Y.
To bring you up-to-date on Wiley Books

Physical Biochemistry
By H. B. Bull, Northwestern University
A specialized treatment of the fundamentals of physical chemistry considering only material useful in the understanding of biochemical and biological problems. 1943. 347 pages. $3.75.

Semi-Micro Qualitative Analysis
By J. T. Dobbins, University of North Carolina
Contains a set of experiments illustrating fundamental principles, a complete scheme of separation of the anions and a scheme of separation of the cations which shortens the time required for complete analysis. 1943. 418 pages. $3.00.

Forest Economics and Finance
By P. L. Buttrick, University of Georgia
Thorough treatment of forest economics, applying general financial principles to forestry and forest industries. 1943. 484 pages. $4.50.

Mainsprings of Civilization
By Ellsworth Huntington, Yale University
A stimulating study of the influence of geography, heredity and culture on man, this book traces the factors that have helped to develop our civilization. 1945. 660 pages. $4.75.

General Chemistry Problems
By W. M. Spicer, W. S. Taylor and J. D. Clary; all at Georgia School of Technology
Teaches the important principles on which problems are based and contains problems illustrating various phases of chemistry. 1943. 120 pages. $1.25.

Electronic Interpretations of Organic Chemistry
By A. B. Remick, Wayne University
A complete discussion of the application of the electronic theory to problems of reactivity. 1943. 470 pages. $4.50.

Pathology in Forest Practice
By Dow V. Baxter, University of Michigan
This book provides a working knowledge of conditions which cause disease and of suitable remedial measures. 1943. 627 pages. $6.50.

Scientific Societies in the United States
By Ralph S. Bates, Massachusetts Institute of Technology
The only book that gives a complete survey of the evolution of American scientific societies during the past two and a half centuries. 1945. 246 pages. $3.50.

Meteorology
Dynamic Meteorology
By J. Holmboe, W. Gustin and G. Forsythe; All at the University of California
Starting from the fundamental principles of physics, this book develops the tools of thermodynamics and hydrodynamics needed for the understanding of atmospheric processes. 1945. 378 pages. $4.50.

JOHN WILEY & SONS, INC., 440-4th Ave., New York 16, N. Y.
To bring you up-to-date on Wiley Books

Geology

Index Fossils of North America
By H. W. Shimer and B. R. Shrock;
Both at Massachusetts Institute of Technology

A reference work for advanced courses in invertebrate paleontology. No comparable book exists: There are over 8,000 individual illustrations; nearly 7,500 species are described and figured. 1944. 837 pages. $20.00.

Eruptive Rocks
By S. J. Shand, Columbia University

This concise, well-annotated book offers an original system of classification of rocks, expresses problems, results and conclusions of petrology in quantitative terms, and relates the theories of petrology to the practices of mining and mineralogy. A lucid, well-balanced authoritative treatment. 1943. 444 pages. $5.00.

Mathematics

College Algebra and Trigonometry
By F. H. Miller, The Cooper Union School of Engineering

A basic integrated treatment for a first course in college mathematics, preparatory to calculus. 1945. 324 pages. $3.00.

Plane and Spherical Trigonometry
By H. A. Simmons, Northwestern University

This enlarged edition begins with the trigonometric functions of the general angle, and includes precisely the solid geometry needed for the study of spherical trigonometry. A large number of applications. Second Edition. 1945. With tables: 510 pages. $3.00.

Basic Mathematics for Engineers
By P. G. Andres, Illinois Institute of Technology, H. J. Miser, Lawrence College, and Haim Reingold, Illinois Institute of Technology

Basic algebra, analytic geometry, and trigonometry, with introductory chapters on differential and integral calculus. 1944. 706 pages. $4.00.

Intermediate Differential Equations
By E. D. Rainville, University of Michigan

The emphasis is placed upon the development of technique in solving problems in differential equations. Engineering applications are given. 1943. 213 pages. $2.75.

Differential Equations
By H. W. Reddick, The Cooper Union School of Engineering

Covers the methods of solving ordinary differential equations, and problems in applied mathematics involving such equations. More than six hundred problems, with answers. 1943. 245 pages. $2.50.

Analytic Geometry
By E. S. Smith, Meyer Salkover and H. K. Justice;
All at the University of Cincinnati

Gives fully illustrated explanations of the topics commonly taught in analytic geometry, and at the same time fits the student for further studies in mathematics. 1943. 298 pages. $2.50.

Statistical Adjustment of Data
By W. E. Deming, Bureau of the Census

Explains when and how to use statistical calculations. 1943. 261 pages. $3.50.

JOHN WILEY & SONS, Inc., 440-4th Ave., New York 16, N. Y.
To bring you up-to-date on Wiley Books

Mineralogy

Dana's System of Mineralogy
Revised and enlarged by Charles Palache, the late Harry Berman and Clifford Frondel; All at Harvard University

New classifications, new methods and new data are featured in the revision of this classic work. Seventh Edition. 1944. 834 pages. $10.00.

Optical Crystallography
By E. E. Wahlstrom, University of Colorado

A comprehensive, simply-written textbook on fundamental concepts for the elementary course. Extensively illustrated, it outlines the theory of the passage of light through crystals and describes the construction and use of polarizing microscopes. 1943. 200 pages. $3.00.

Electron Optics and the Electron Microscope
By V. K. Zworykin, G. A. Morton, E. G. Ramberg, J. Hillier, A. W. Vance; All of the RCA Laboratories, Princeton, N. J.

A comprehensive book covering the theory and use of the electron microscope. 1945. 745 pages. $10.00.

Theory of X-Ray Diffraction in Crystals
By W. H. Zachariasen, University of Chicago

A complete presentation of the principles and underlying theory of crystal structure. For chemistry and physics students at the senior or graduate level. 1945. 255 pages. $4.00.

Photomicrography Theory and Practice
By Charles P. Shillaber

Probably the most comprehensive treatment of the subject in any language. Actual procedures are explained. 1944. 773 pages. $7.50.

General Physics
By O. H. Blackwood, University of Pittsburgh

This comprehensive textbook features a simple but rigorous treatment, ample illustrations and numerous problems. The absolute system of force units is used. 1943. 630 pages. $3.75.

Treatment of Experimental Data
By A. G. Worthing and Joseph Geffner

A discussion of the proper methods of using tables, graphs, curves and other similar tools of expression. The student is trained in organizing and interpreting experimental data. 1943. 545 pages. $4.50.

Introduction to Biophysics
By Otto Stuhlmans, Jr., University of North Carolina

This survey of important biophysical material covers subjects representative of major subdivisions of physics. For junior and senior college students. 1943. 375 pages. $4.50.

Psychology

Emotion in Man and Animal
By P. T. Young, University of Illinois

An important textbook on emotion in relation to attitudes and motives and to the practical human problems of development and adjustment. Laboratory findings, clinical material and case studies make up the sound content, pretested in the classroom. 1943. 422 pages. $4.00.

JOHN WILEY & SONS, Inc., 440-4th Ave., New York 16, N. Y.
To bring you up-to-date on Wiley Books

Sociology

Youth, Marriage and Parenthood
By L. D. Rockwood and Mary Ford; Both at Cornell University

This presentation of research findings relates attitudes expressed by 364 college students to similar questionnaires and to selected factors in the students' own environment. 1945. 279 pages. $3.00.

The Family and Democratic Society
J. K. Folsom, Vassar College

A survey of most of the important research bearing on the family and an interpretation of the findings, using anthropological, sociological and individual-psychological approaches. Includes a discussion of the probable future of the family. 1943. 765 pages. $4.00.

In Press (ready in late spring—early summer)

Manual of Child Psychology
Edited by Leonard Carmichael, President, and Director of the Laboratory of Sensory Psychology and Physiology, Tufts College

A handbook of facts, established theories, techniques and methodology which surveys the field of child psychology. Each chapter written by an authority. Probable price $6.00.

The Microtechnique of Organic Qualitative Analysis
By Frank Schneider, Queens College, Flushing, N. Y.

A guide to techniques and manipulations required for identification of organic compounds. Probable price $3.50.

Laboratory Manual for General Bacteriology
By G. L. Pettier, C. E. Georgi and L. F. Lindgren; All at the University of Nebraska

Fundamental Chemistry
By H. G. Deming, University of Nebraska

Water Bacteriology
By S. C. Prescott, Massachusetts Institute of Technology, C. E. A. Winslow, Yale School of Medicine, and M. H. McCrady, Quebec Ministry of Health and Social Welfare

The text of this new edition has been doubled; the material has been almost wholly rewritten and the viewpoint completely modernized. As always the book is concerned with the public health and sanitary aspects of the subject. Probable price $3.50.

Principles of Field and Mining Geology
By J. D. Forrester, University of Idaho

An analysis of geological field techniques—the recognition of geologic phenomena in the field, methods of surveying and recording observations, and the interpretation, analysis and presentation of field records. Probable price $7.50.

Introduction to the Chemistry of the Silicones
By E. G. Roehow

Here is a compact and comprehensive survey of present knowledge in the field. The first few chapters review silanes and their derivatives; later chapters emphasize the silicone polymers and deal with methods for their preparation. Probable price $2.50.

JOHN WILEY & SONS, Inc., 440-4th Ave., New York 16, N. Y.
We are pleased to announce the publication of the most comprehensive account of up-to-date research work on sexual endocrinology that has yet appeared in any country.

This volume summarizes all the important experimental work done in Europe, Britain, and America. It provides measurable data, arrives at general conclusions, and organizes what has hitherto been a sprawling subject.

Circulars listing entire Contents are available upon request

$8.50
**ENGINEERING PREVIEW**

*By L. E. Grinter and Others*

This new book is the first introduction to engineering to contain the full background materials of mathematics, chemistry, and the other sciences with which the future student of engineering must be familiar. In the first chapter Dr. Grinter outlines the whole broad realm of engineering and the differences between the various branches. Succeeding chapters cover specific subjects, each by a man particularly well qualified to present it.

$4.50

General Chemistry. New second edition
By Eugene P. Schoch, William A. Felsing, and George W. Watt, University of Texas. International Chemical Series. Ready in June

This text for beginning students has been entirely rewritten, and is essentially a new book. Laboratory directions have been omitted and will be issued in a separate manual. The revised text includes a chapter on nuclear chemistry which introduces transmutation of the elements, artificial radioactivity, nuclear fission, atomic energy, etc. Sections have also been added introducing modernized inorganic chemical nomenclature and the economic factors related to the chemical industries.

In the present revision of this standard text the authors have made numerous changes which tend to emphasize fundamental concepts. The treatment of function has been stressed. Every chapter has undergone revisions designed to clarify the exposition and to bring it abreast of current ideas. In many instances descriptions have been made more explicit, and illustrated by simple diagrams.

An Introduction to Botany. New second edition

As before, this well known text is designed for a one-semester course in botany, covering the fundamental facts and principles relating to the structure, function, and life relation of plants. The book has been thoroughly revised in accordance with present-day knowledge, a number of chapters have been entirely rewritten, and much new material has been added.

Physical Chemistry for Colleges. New sixth edition
By E. B. Millard, Massachusetts Institute of Technology. International Chemical Series. Ready in July

Again the author presents physical chemistry to beginners, with such simplicity that they can understand it after careful study, and yet with such precision that they will acquire a sound background with which to continue in the field beyond the introductory course. The greater part of the text has been rewritten, with the inclusion of much new experimental material, and many new problems have been added.

As in previous editions, this textbook presents in logical sequence the principles of plant taxonomy and nomenclature and discusses representative families of plants. The book is applicable to all parts of the country. Most of the chapters have been thoroughly revised and amplified, some have been almost wholly rewritten, and a new one has been added on methods of identification.

General Zoology

This highly successful standard text, generally regarded as one of the best now available, represents an introduction to zoology designed for a "types" course. The book provides a general biological approach and a systematic review, in order to give the student a rational understanding of the structure, function, and life characteristics of animals, as well as an orderly knowledge of animal types.

Laboratory Manual for General Zoology

(A booklet, Suggestions for Laboratory Instructions, will be furnished gratis to users of the Manual.)

Textbook of Healthful Living. New third edition
By Harold S. Diehl, M.D., University of Minnesota. 708 pages, $7.50.

The author of this well known practical guide to healthful living has again revised the text to include recent developments in the fields of nutrition, vitamins, physical fitness, immunity, the military control of insect-borne diseases, etc. All statistics have been brought up to date. New material has been added on mental health, heredity, narcotics, drug addiction, care of the skin, and medical services.
for Fall Classes . . . McGRAW-HILL

Introduction to Physics
By Harley Howe, Cornell University. 539 pages, 6 x 9, 483 illustrations. $3.75

A leader in the field. The text states physical laws in rigorous but nonmathematical terms; illustrates physical principles from the student's daily experience; incorporates more "modern physics" in the traditional organization of a first course; and encourages the student to ask questions and think for himself. Includes a wealth of tested exercises, questions, examples, problems, and illustrations.

General Chemistry
By John Arend Timm, Simmons College. International Chemical Series. 691 pages, 5½ x 8½, 185 illustrations. $3.75

Off to an excellent start, this distinctive text has won the approval of teachers and reviewers, who praise the clear, graphic presentation and the vivid, readable style. The text is designed for students who plan to use chemistry in their professional education, and is suitable for beginners as well as those who have completed an elementary course in secondary school. One of the outstanding features of the book is the sound modern approach to the fundamental theory.

Biology: The Science of Life
By Mary Stuart MacDougall, Agnes Scott College. In collaboration with the late Robert Hegner, The Johns Hopkins University. 963 pages, 5½ x 8½, 555 illustrations. $4.00

Enthusiastically welcomed by teachers everywhere, this immediately successful text tells the story of biology simply yet scientifically, in an adroit combination of the "principles" and "types" course that permits an unusual degree of flexibility. Although emphasis is placed upon zoology, plant biology is included in every general discussion of principles, respiration, excretion, reproduction, etc.

Fundamentals of Physical Science
By Konrad Bates Krauskopf, Stanford University. 660 pages, 6 x 9, 328 illustrations. $3.50

A widely adopted text, offering a survey course in physical science, physics, chemistry, astronomy, and geology are presented as a unified field of knowledge. The language is simple, with a minimum of technical forms, and abstract concepts are illustrated by concrete examples. Throughout, emphasis is placed upon basic principles and methods of scientific reasoning.

Chemistry for Our Times. An Introduction to the Science of Chemistry
By Elbert C. Weaver, Phillips Academy, and Laurence S. Foster, Massachusetts Institute of Technology. Ready in June

A basic first book for the high school student of chemistry, stressing scientific principles, consumer approach, and the impact of chemistry on everyday life. Particular care is taken to present the subject accurately in the light of the most recent information available. The book is especially rich in questions, problems, and other learning activities. A Teacher's Manual will be available.

Practical Physics

An elementary, practical, and abbreviated text in introductory general physics. It is admirably suited for intensive courses in physics, as it stresses those aspects of the subject that are of immediate use in industry and technical work. The book utilizes in a logically progressive manner the simple mathematical material needed.

Man and the Biological World
By J. Speed Rogers, Theodore H. Hubbell, and C. Francis Byers, University of Florida. 605 pages, 5½ x 8½, 180 illustrations. $3.50

Widely praised, this comprehensive text for survey courses emphasizes basic principles and biology as a science, giving the background, facts, and fundamentals which will enable the nonbiologist to understand and evaluate his own biological heritage and his relations to other organisms.

Send for copies on approval

McGRAW-HILL BOOK COMPANY, INC.
330 West 42nd Street, New York 18, N. Y. Aldwych House, London, W.C.2
The First Book Ever Published on Counters!

**ELECTRON and NUCLEAR COUNTERS**

*By Serge A. Korff, M.A., Ph.D., Associate Professor of Physics, Supervisor of Physical Research, College of Engineering, New York Univ.*

The Counter—one of the most essential tools in present-day science and scientific research—is steadily growing in importance; and here, in the first book ever published on the subject, is complete information on the construction, purposes, uses, and operating effectiveness of the various types of Counters.

Based upon the author’s wide experience and extensive research, this book contains a wealth of necessary data for all those who work with Counters or whose work includes establishing the identity and amount of naturally radioactive material or artificially activated substances.

Physicists; physical chemists; geophysicists; and medical, X-ray, and radium-therapy personnel will find this book an invaluable source of specific information on the practical application of the Counter. Engineers, and research workers will find it a complete, authoritative, carefully indexed reference text.

**Partial Table of Contents:**

- NUCLEAR COUNTERS: present uses; description of the phenomena as a function of voltages; definition of terms and symbols.
- IONIZATION CHAMBERS: types of chambers and features of construction; counting chambers; compensated chambers; integrating types of ionization chambers.
- PROPORTIONAL COUNTERS: how Counters may be used to differentiate between different types of particles; theory of proportional Counter action; Counters for special purposes.
- THE GEIGER COUNTERS: theory, construction, and operation of self-quenching and nonself-quenching Counters; thin-window, and large solid-angle Counters; evacuation and filling; Simpson’s two-counter arrangement; summary of operational techniques and operational experience.
- ERRORS AND CORRECTIONS IN COUNTINGS: computations and arrangements; interpretation of Counting rates and integral and differential curves; efficiency of coincidence Counting; errors in using proportional Counters; procedures to insure short recovery time.
- AUXILIARY ELECTRONIC CIRCUITS: Quenching circuits and their modifications; coincidence circuits; scaling circuits; recording circuits; voltage supply and regulating circuits; integrating circuits and counting-rate meters; pulse amplifiers.

**Examine This Book FREE**

Take advantage of this opportunity to see for yourself how thoroughly “Electron and Nuclear Counters” covers every detail in the principles and practices of Counter measurements; how fully it furnishes all necessary facts about construction, operation, and the adaption of Counters to any specific requirement. Use the coupon at right to obtain a copy of this great new book for 10-days’ free examination.

NEW Constant-Formula FEED
PURINA LABORATORY CHOW

New Laboratory Chow is prepared on a new and even more complete formula made expressly for laboratory rats, mice, dogs, cats, hamsters and monkeys. The formula never varies; mixing is very exact and ingredients are tested regularly, assuring you greatest practical uniformity in nutritional factors. Send for complete analysis and vitamin assay.

PURINA MILLS, St. Louis 2, Mo.

THE LaMOTTE
A B C of pH CONTROL HANDBOOK
(12th Edition)

If you do not have a copy of this informative and helpful booklet, one will be sent at your request without obligation. It contains up-to-the-minute information of interest concerning LaMotte equipment for use in general process control, boiler feed water control and handling of water, sewage and industrial wastes. LaMotte also offers a system of informative technical reports. Undoubtedly there is a technical report on control equipment of interest to your chemical staff. No obligation is involved in requesting same.

NEW LaMOTTE WATER SOLUBLE pH INDICATORS
Highly purified and instantly soluble in distilled water. Of maximum sensitivity, stability and tintorial power. In ordering specify: WATER SOLUBLE INDICATORS.
Made exclusively by
LaMotte Chemical Products Company
Dept. “H” Towson 4, Md.

Exposure Determination in Photomicrography
by direct light measurement in plane of image

PHOTOVOLT Electronic Photometer MOD. 512
Also suitable for spectrophotometry, densitometry of spectrographs and X-ray diffraction negatives, measurement of luminescence and fluorescence, ultraviolet radiation and absorption. Now available with interchangeable search units, for infra-red, visible, ultraviolet as far as 200 millimicrons.

PYRO
The Simplified Optical Pyrometer

This simplified Optical Pyrometer takes the “wreck” out of “reckon.” Many a heat has been wrecked as a result of “guessing” at the temperature. “PYRO” is a lightweight (3 lbs.), totally self-contained, direct reading, sturdy unit made to stand rough use, but it is absolutely accurate and dependable. No correction charts, no accessories, no upkeep! New concentrated test mark and ease of operation permit unusually close and rapid temperature determination even on minute spots, fast moving objects or the smallest streams.

The “Special Foundry Type” and “Triple Range” have, in addition to the standard calibrated ranges, a red correction scale determining the true spout and pouring temperatures of molten iron and steel when measured in the open.

PYRO is furnished in 5 ranges to meet all plant and laboratory requirements, it is standard equipment with the leading plants and laboratories.—Ask for our catalog No. 80—it will interest you!

Stock Ranges 1400°F. to 5000°F.

Manufacturers of “PYRO” Optical, Radiation, Immersion and Surface Pyrometers.

HELLIGE-DILLER
PHOTOELECTRIC
COLORIMETER

NEW

“Bio-PhotoCol”

CALIBRATED for 56 BIO-CHEMICAL PROCEDURES

A thoroughly developed Photoelectric Colorimeter, precalibrated for 56 bio-chemical clinical procedures, more complete than any other instrument offered for this purpose.

The colorimeter is linear and has utmost differential responses which meet every requirement, electrical and engineering detail, and is unsurpassed in regard to simplicity and convenience of operation.

Six light filters of narrow spectral transmission ranges, and precision absorption cells enable determinations of highest accuracy.

The Colorimeter is supplied complete with all necessary accessories, including a handbook containing outlines of procedures and calibration tables for 56 bio-chemical tests and a valuable compilation of helpful and practical information concerning clinical bio-chemical methods.

Stokes VACUUM GAGES
(Patented McLeod Type)
Are Always Accurate
Require No Calibration

TWO MODELS
AA. 0 to 5000 microns
BB. 0 to 700 microns (with readings to 1/10 micron)

This new, improved Stokes Patented (McLeod type) Vacuum Gage provides rapid (2 to 5 seconds) readings within the micron range with permanent accuracy under all conditions. It does not require calibration against other gages and retains its accuracy in the presence of all gases including hydrogen, and condensable vapors including water and oil.

These gages are compact, rugged, convenient to use as portable instruments or on fixed mountings. They are widely used in physics, organic and physical chemistry laboratories and by Industry ... for applications such as drying blood plasma, penicillin and biologicals from the frozen state, organic distillation under higher vacuum than heretofore (in which ordinary closed-end manometers are not adequate) and for testing efficiencies of vacuum methods, apparatus and systems.

THOUSANDS IN USE

F. J. STOKES MACHINE COMPANY

Stokes High Vacuum
PUMPS • GAUGES • EQUIPMENT
**FS All-Glass Stirrer**

Holds vacuum or pressure without mercury seal

Differences as great as 60mm between inside and outside of flask cause no leakage.

Apparatus, as supplied, consists of bearing and shaft precisely fitted to each other.

Recommended for all types of chemical work, particularly for organic and electro-chemical research, since no problem of chemical effect of the stirrer or its seal arises. The reaction mixture is in contact with glass only.

At all leading Laboratory Supply Dealers.

SCIENTISTS are in need for teaching in colleges and universities and for fundamental and applied research in industrial laboratories. Heads of science departments in schools and directors of industrial laboratories read the PERSONNEL PLACEMENT notices each week in SCIENCE to find staff additions and replacements.

If you are a scientist recently returned from the armed forces, or if you are seeking professional advancement through increased responsibilities, you can announce you availability for a reasonable cost in PERSONNEL PLACEMENT.

Notices of ‘Positions wanted’ are printed each week in SCIENCE at the rate of 10¢ a word, $2.00 minimum, cash with order. Box addresses are counted as 8 words additional. Copy should be sent four weeks in advance of publication date desired, and addressed to

Personnel Placement

WANTED

Gross Anatomy Instructor—male. State medical school, Southwest. Will be expected to assist or teach neuroanatomy. Submit complete application and salary expected. Reply Box 380, SCIENCE.

WOMAN CHEMIST

With B.S. or M.S. degree—editorial ability—secretarial training. Send details of training, experience and expected salary to Miss L. Matson.

Central Laboratories
General Foods Corporation
11th & Hudson Streets
Hoboken, New Jersey

WANTED

Professor of Glass Technology

For Overseas Post

Applications are invited for the post of Professor in Glass Technology. Salary 500 rupees per month, with annual monthly increments of 25 rupees until salary reaches 750 rupees per month, when annual monthly increments are 60 rupees until salary reaches 1000 rupees. A higher starting salary could be paid for a well qualified candidate. If no suitable candidate is available for this grade an appointment may be made in the grade of 300 rupees per month, with annual monthly increments of 20 rupees until salary reaches 600 rupees. Applications should reach

Pro. Vice-Chancellor
Benares Hindu University
Benares (India)
on or before 30 April 1946.

OPTICAL DESIGNER

Position available for Optical Designer, capable of handling the calculation and correction of aberrations in photographic and projection lens systems. Our engineering facilities are now engaged in post-war work and we are in a position to offer continuity of employment to qualified engineers on an extensive development program. Junior designers or engineers will be considered. Write giving full information on education, experience and other qualifications to the Director of Personnel.

BELL & HOWELL COMPANY
7100 McCormick Road
Chicago 45, Illinois

INDEXER

Woman—B.S. or M.S. degree in chemistry and good training in setting up library type index systems. Send details of training and experience and salary expected to Miss L. Matson.

POSITIONS OPEN

Opportunities Available—(a) Young woman or young man with Master's degree in physics or pharmacology; research department, large company. (b) Young woman well trained in perimetry; must be interested in career in professional world; college graduate required—advantageous if candidate has Ph.D. degree; department of ophthalmology-stereoradiography of clinic located in university men's hospital. (c) Allergist to become associated with small group; duties include directing staff of five technicians. (d) Bacteriologist capable of carrying responsibility of bacteriology and serology in group specializing in pathology and radiology; duties include teaching student technicians; Middle West. (e) Sanitarian to direct plant and production; sanitation program of one of the country's most important food industries; must be soundly grounded in fundamentals necessary to well-rounded sanitary program for food industry; capable public speaker required. (f) Several bacteriologists and serologists for public health laboratories; state department of health; rank and salaries dependent upon experience in public health laboratories. South, 82-3 Medical Bureau (Burnelac Larson, Director) Palmolive Building, Chicago 11.

POSITIONS WANTED

The California Medical Bureau, Agency for scientific and lay personnel in medicine, biology, chemistry, physics, and allied sciences, supplies teachers, research workers, laboratory technicians, skilled office help. Prompt service. Registration free. Your patronage respectfully solicited. The California Medical Bureau, Agency, 563 East Colorado Boulevard, Pasadena 1, California.

Physicians, Laboratory and X-Ray Technicians, Bacteriologists, Pharmacists, Physicians. Please let us know your qualifications. Our service, established 1896, is nationwide. Write us today. All information confidential. Azner's Woodward Bureau, 30 North Michigan, Chicago 2.

Universities and colleges throughout the United States are asking us for recommendations for positions on their staffs that need to be filled. Because the demand this year is so great, we are interested in further registration of those ready for advancement in professional rank and of those who would accept instructorships.

AMERICAN COLLEGE BUREAU

28 E. Jackson Blvd. Chicago 4, Illinois

Bacteriologist: Ph.D., male. 38. Five years Government experience in crop disease bacteriology and mycology; three years Army experience in medical and sanitary bacteriology. Desires position in industrial microbiology at the university teaching. Attending St. Louis meeting. Arrange interview through Box 104, SCIENCE.

Biologist, 36, Ph.D., desires position. Training in cytology, cellular physiology; Eight years university teaching, general botany, comparative anatomy, embryology, histology, histological techniques. Will be attending St. Louis meeting. Arrange interview through Box 370, SCIENCE.

Biologist, 37, A.B., M.S., Ph.D., desires college position. Eight years teaching experience. Sigma XI, Du Pont scholarships. Well trained in premedical and parasitological subjects. Extensive research background including two years service experience with DDT. Box 375, SCIENCE.

Botanist, Ph.D. desires position in university or college; sixteen years teaching experience; Sigma Xi, Du Pont scholarships. Will be attending St. Louis meeting. Arrange interview through Box 388, SCIENCE.

Physician-pharmacologist—Major, M.C. (terminal leave); 13 years experience internal medicine, related fundamental sciences; included American Men Science, American Men Education; 35, married; desires opportunity either with medical school or ethical pharmaceutical firm. Will attend St. Louis meeting. Arrange interview through Box 385, SCIENCE.
Personnel Placement

POSITIONS WANTED

MEDICAL PROMOTION EXECUTIVE

With exceptional qualifications seeks association with a progressive pharmaceutical organization or advertising agency. During the past twenty years has been:

1. Research Scientist in a world famous institute.
2. Practising physician with Class A appointments and fellowships.
3. Promotional Director and Medical Editor with two first line ethical drug houses.
4. Consultant to two 4A advertising agencies.

Has planned, created and directed sales building and promotional programs, correlated research to sales, developed new products. Speaks authoritatively, writes persuasive and responsible copy. Has wide knowledge of current developments in medicine, research, and the problems of the doctor's practice. Box 387, SCIENCE.

Pharmacologist with M.D., Ph.D. degrees, full professor in Grade A Medical School, many years experience in pharmacological research, consultant for pharmaceutical industry. Now available for full time developmental work in industry. Will be attending St. Louis meeting. Arrange interview through Box 405, SCIENCE.

Plant Taxonomist, 41, Ph.D., desires position teaching taxonomy and allied subjects and charge of herbarium with opportunity for research. Will be attending St. Louis meeting. Arrange interview through Box 392, SCIENCE.

Plant physiologist, field bionecologist, army meteorologist, Ph.D., desires college teaching. Wide experience. Will be attending St. Louis meeting. Arrange interview through Box 373, SCIENCE.

Plant Physiologist, M.S., near Ph.D., age 31. Publications. Sigma Xi. Desires biochemical and plant hormone research in horticulture. Box 411, SCIENCE.

Physics Instructor, age 32, M.A. in physics from Columbia, ten years private secondary school teaching experience, desires position either in university teaching or industrial laboratory. Address Box 294, CULVER MILITARY ACADEMY, Culver, Indiana.

Opportunity Wanted—Physicist with broad training and experience in academic, industrial and war research, and research direction is available: B.S. (Chemistry and Mathematics) M.S. (Physics); Ph.D. (Physics); interests are general physics, electric and mechanical devices, plastics; for further information, please write Bureau Lenson, Director, Medical Bureau, Palmolive Building, Chicago 11.

Physiologist with wide experience in teaching and research desires academic post. Will be attending St. Louis meeting, arrange interview through Box 355, SCIENCE.

Physiologist, 41, Ph.D. Qualified in biochemistry and nutrition. Fourteen years experience in medical school teaching and research. Publications and honor societies. Recently discharged army colonel. Available immediately. Box 351, SCIENCE.

Psychologist: Male, married, Ph.D. June, 1948, large university, desires permanent position with research privileges in college or university. Good teaching and research references. Box 402, SCIENCE.

Research Engineers, former Associate Professor of Mechanical Engineering, desires teaching or administrative position. Sixteen years experience teaching design subjects. Age 48. Address Box 383 SCIENCE.

Zoologist—Ph.D. Woman, Assistant Professor. Teaching experience in general zoology, parasitology, comparative anatomy, mammalian anatomy and heredity. Extensive research and publications in parasitology. Available September. Will be unable to attend St. Louis meeting. Arrange interview with representative through Box 388, SCIENCE.

Zoologist, Undergraduate and three years of graduate study. Teaching mostly zoology, some parasitology. Degree awarded 1948. Will be attending St. Louis meeting. Arrange interview through Box 366, SCIENCE.

Zoologist, Ph.D.; 31, married, two children. Officer in USAAF now on inactive status. Former assistant professor, teaching introductory biology, comparative anatomy, invertebrate zoology, physical zoology. Museum and field experience in Europe, Cuba, Panama, Mexico. Research in entomology and comparative physiology. Would prefer position in which good undergraduate teaching is of paramount importance, if possible in western or northern U. S. or in Canada. Will attend St. Louis meeting. Arrange interview through Box 350, SCIENCE.

Zoologist, B.A., M.A., Ph.D. degrees, 30, married. Four years university teaching experience. Captain, Sanitary Corps, three years' parasitologist in malaria survey and laboratory work. Available Sept. 1. Desires teaching position in college or university with opportunity for research in field of zoology and parasitology. Will be attending St. Louis meetings. Arrange interview through Box 355, SCIENCE.

Zoologist, woman, 25, A.B., M.A.; Ph.D. degree in June, 1948. Chemistry and paleontology minors. Four years university teaching experience in mammalian anatomy, histology, physiology. Prefers teaching position in university with opportunities for research. Will consider other positions with research possibilities. Available July 1. References, transcripts, etc. upon request. Box 378, SCIENCE.

Zoologist—Eighteen years university teaching—zoology, biology, histology, anatomy, embryology, comparative anatomy. Accepted present position during "depression." Desires change to more progressive institution. Box 374, SCIENCE.

Zoologist—desires headship Zoology of Biology department starting June or September. Ph.D. outstanding eastern university. Over twenty years undergraduate and graduate teaching experience. Research internationally recognized. Successful research supervision. Member eight national societies. Highest references. Minimum salary $5,000.00. State details of position. Box 403, SCIENCE.

Zoologist, Ph.D., woman, 30. Three years teaching anatomy, embryology, physiology. Sixteen publications in developmental physiology. Displaced by returning serviceman. Desires college teaching with opportunity for research or writing. East. Will be attending St. Louis meeting. Arrange interview through Box 376, SCIENCE.

Zoologist, 41, Ph.D. (Harvard). Twenty years teaching experience, 13 in undergraduate zoology, 7 in anatomy in medical school. Desires position as professor or associate in zoology, with opportunity for research. Sigma XI, publications. Box 360, SCIENCE.

Zoologist-Physiologist wishes teaching-research position. Eight years experience in research in insect physiology and toxicology. Will be attending St. Louis meeting. Arrange interview through Box 379, SCIENCE.

Zoologist, Ph.D., age 33, desires teaching position. Now engaged in applied research. Excellent record and recommendations. Will be attending St. Louis meeting. Arrange interview through Box 383, SCIENCE.
The Market Place

RATES to be paid in advance. Regular setting 10¢ a word, minimum charge $2.00 each; count 8 words if a box address is used. Display, 3 inches maximum, $8.50 per column inch. No discounts or commissions.

SEND advertisements with remittance to the ADVERTISING DEPARTMENT, American Association for the Advancement of Science, AMERICAN UNIVERSITY, MASSACHUSETTS AND NEBRASKA AVENUES, WASHINGTON 16, D. C. Correct remittance must accompany instructions and copy and advertisements will be published in sequence of completed orders. RECENT PUBLICATIONS

CARNEGIE INSTITUTION OF WASHINGTON
WASHINGTON 5, D. C.

Pub. No.
553. Chaney, Ralph W., Carleton Condit, and Daniel L. Axelrod. Pliocene Floras of California and Oregon. (Contributions to Paleontology.) Octavo, vii + 407 pages, 3 figures, 64 plates. (1945.) Paper, $4.50, cloth, $5.00.

The Carnegie Institution of Washington, Washington 5, D. C., has published some 850 volumes covering the wide range of its researches. Orders may be placed direct or through regular dealers. Advise subjects in which you are interested, and catalogue will be sent upon request.

For bridging the gap between unaided vision and microscopy, we offer

The Master Magnifier Set

An assortment of fine magnifiers with these unusual features:

Contains 7X, 20X and 40X magnifying units.

Built-in lighting units illuminate the objects viewed; operated either by batteries, for field work, or by electric current, for office and laboratory.

The 40-power is fitted with a 0.001 inch scale. This will indicate dimensions of small objects and details not measurable with ordinary micrometers.

All in compact portable case

For wider scientific knowledge

... Functional Photography

By adapting to the needs of science photography's unique ability to arrest time and motion... to magnify and record for study phenomena beyond the powers of human vision... Functional Photography offers a way to ever quicker, more accurate research, and to the advancement of scientific knowledge.

The examples given on this page show only six of the applications of Functional Photography to modern science. For more complete information, write today for the new 20-page "Functional Photography" booklet.

EASTMAN KODAK COMPANY
ROCHESTER 4, NEW YORK

If you attend the Science Convention in St. Louis, don't miss the Kodak Functional Photography exhibit, booths 53 and 54. It may help you to extend photography's value to your work.
The simple, logical design of the Spencer Scholar’s Microfilm Reader is based on a careful scientific study of microfilm reading requirements made by the Committee on Scientific Aids to Learning.

The Microfilm Reader provides:
UNEQUALED EYE COMFORT . . . The opaque screen may be read for hours without fatigue.
CLEAR, BRILLIANT IMAGE . . . The optics are well corrected and precision made.
VERSATILITY . . . It can be used in offices, schools, hospitals, libraries—for reading documents, business records, international correspondence.
INDUCEMENT TO STUDY . . . The shadow box gives an unusual sense of privacy.
LOW COST . . . It is low in both purchase price and operating cost.

American Optical
Scientific Instrument Division
Buffalo 15, New York

The Spencer Microfilm Reader projects long or short lengths of 35 mm. or 16 mm. microfilm at 15x. Available for immediate delivery. For literature write Dept. CI23.
