The STATHAM GAGE

Displacements as minute as 0.000008" or Force Changes as small as 0.02 oz. are readily detected by the Statham Gage without expensive electronic equipment. Complete system for remote indication or recording comprises Statham Gage, dry cells, and microammeter or recording galvanometer.

The Statham Gage as well as Statham Accelerometers and Statham Pressure Pickups will be shown at the Statham Booth (#133) at the St. Louis Science Exhibition, March 27-30. See us in St. Louis.

The ideal instrument in its field
Price $25.00 F. 0. B. Glendale, Calif. Descriptive literature available upon request.
The two New Books described below will be on display at our booth as well as many other Saunders New Books and New Editions of Special Interest

**Todd & Freeman's Health Care of the Family**

Practical and up-to-date, the material in this new text has been selected to meet the need for a comprehensive textbook on family health conservation. Concisely and simply written, it does a splendid job of presenting a maximum of scientific information with a minimum of technical terminology—on such subjects as sanitation, the common infectious diseases, chronic illness and disease prevention.

Not only is there a thoroughly usable presentation of child and maternal care, but in addition full consideration is given to the care of the adult male patient, including the returning war wounded. The social aspects of family life are also given considerable attention.

*By RUNONA L. TODD, PH.D., M.D., Physician in the Students' Health Service and Assistant Professor in the School of Public Health, University of Minnesota; and RUTH B. FREEMAN, R.N., M.A., Associate Professor and Director of the Course in Public Health Nursing School of Public Health University of Minnesota. 530 pages, illustrated. $3.00*

**Olson's Prevention, First Aid & Emergencies**

Miss Olson, widely known in the nursing profession, has written a most useful and practical book. All who must be prepared to render first aid will find a wealth of tested guidance in this new book. The simplest and most modern methods are discussed and vividly illustrated to enhance their value. Many of the important chapters have been written by doctors on the staff of the Mayo Clinic on such subjects as Shock, Medical Emergencies, Poisons and Antidotes. Some of the more important chapters are those on Anatomy and Physiology; Transportation; Common Accidents; Wounds; Hemorrhage and Bleeding; Injuries to Joints, Bones and Soft Tissue; Shock, Asphyxia, Resuscitation; Poisoning; Effects of Heat and Cold; and Medical Emergencies.

The 190 illustrations have all been carefully selected to help the reader grasp each procedure with greatest ease and certainty.

*By LYL A. OLSON, R.N., Superintendent of Nurses, Kahler Hospital, Rochester, Minnesota. 591 pages, with 190 illustrations. Just ready.*

the Scopicon

The SCOPICON is an unique micro-slide projection apparatus embodying several innovations which endow it with extraordinary versatility. For small-group study or consultation, it is used in conjunction with a table-mounted dark chamber fitted with ten viewing hoods. The magnified image is then projected upon a viewing platen housed within the dark chamber.

For auditorium or class-room demonstrations, the Scopicon projector unit may be quickly uncoupled from the table and employed for wall-screen projection, achieving brilliant and evenly-lit images six feet or larger across, even under oil-immersed microscopic powers. This remarkable magnification and even illumination rise from the utilization of a high-pressure mercury arc light source and a highly efficient optical system. Accessory devices quickly adapt the Scopicon for micro-photography.

the Autotechnicon

The AUTOTECHNICON is an instrument which mechanically processes tissues. All steps in the processing sequence... fixation, washing, dehydration, clearing, infiltration, and staining are performed in exact accordance with the requirements of any elected technique. Fully automatic operation assures unvaryingly uniform results, with notable savings in time, labor, materials.

the Lab-aid

The Technicon “LAB-AID” steel filing cabinet has interchangeable drawers for filing either 1” or 2” microslides, Kodachromes, transparencies, cards and lanternslides up to 4½”. All-steel welded construction, handsomely finished. All drawers are single-bank, moving on a smooth-tracking rail system. The “Lab-aid” cabinet provides the ultimate answer to the laboratory’s filing problems.

In addition to the above, we will also exhibit the Technicon PIPETTE WASHER, the Technicon Constant-Temperature WATER BATH, and many other devices of interest to the Profession.

Special Diet Materials
FOR BIOLOGICAL PROCEDURES

Long-continued experimentation with animals in our own laboratories has led to the development of many special diet materials which we have found valuable in nutritional research. While the preparation of these materials in small quantities in the individual laboratory would be troublesome and costly, our production facilities enable us to offer them—conveniently packaged and economically priced—as a service to investigators engaged in biological assay and research.

VITAMIN TEST CASEIN GBI. Uniformly free of vitamins A and D, as well as the known factors of the vitamin B complex and vitamin K.

VITAMIN A TEST DIET, U. S. P. XII, GBI. For depletion of animals within allotted time-weight limits specified for Vitamin A assays.

RACHITOGENIC DIET No. 2, U. S. P. XII, GBI. For depletion of animals within allotted time-weight limits specified for vitamin D assays.

VITAMIN B COMPLEX TEST DIET GBI. For use with suitable animals and experiments, to produce deficiencies of thiamine chloride, riboflavin, niacin, pyridoxine and pantothenic acid.

SALT MIXTURE No. 2, U. S. P. XII, GBI. For preparing vitamin A test diet and also as a mineral source in the preparation of most laboratory diets.

WRITE for complete list and prices of these and other diet materials, including crystalline vitamins, amino acids, casein hydrolysate, biotin and other chemicals of biological significance.

Essential Media and Supplements

FOR MICROBIOLOGICAL PROCEDURES

General Biochemicals Incorporated offers the following products as a special service to investigators studying nutritional problems. Each lot has been laboratory tested to assure uniform composition and results.

"VITAMIN FREE" CASEIN HYDROLYSATE GBI is a 10 per cent solution of acid-hydrolysed, purified casein. When suitably supplemented it will support excellent growth of the organisms employed for microbiological procedures, including U. S. P. XII niacin and niacinamide assay.

*BASAL MEDIUM STOCK SOLUTION GBI has been developed to fill a growing demand for a complete medium suitable for microbiological riboflavin assay, U. S. P. XII.

*YEAST SUPPLEMENT SOLUTION GBI is offered as a convenience to investigators who prepare their own media for microbiological research.

SUPPLEMENTAL INGREDIENTS are also supplied, such as crystalline vitamins, amino acids and purine bases.

These GBI products, as well as a wide range of other rare chemicals of biological significance, are conveniently packaged and economically priced. Write for our complete descriptive price list.

SCIENTISTS AVAILABLE

Scientists are now being released from the armed forces. Many of these men have been engaged in fundamental and applied research or instruction while on active duty. Notices of their availability and brief statements of their qualifications appear each week in the Personnel Placement section of Science.

IF IT IS YOUR RESPONSIBILITY
to employ scientists for teaching or research, read the "Positions wanted" notices in Personnel Placement regularly. The scientist you need for your staff may have a notice in this week’s issue on pages 44-45-46.

A FURTHER SUGGESTION

If you need men or women with special qualifications, you can announce the position in the "Positions open" part of Personnel Placement for a reasonable cost. Notices are printed at the rate of 10¢ a word, $2.00 minimum, cash with order. Box addresses are counted as 8 words additional. Copy should be sent to

Cyclotron Specialties Instruments are readily assembled into a complete apparatus for the rapid and accurate determination of radioactivity. They combine simplicity and economy with all important requirements of the most exacting investigators and have won recognition of the leading workers in this field throughout the world...in educational institutions, industrial plants, laboratories and hospitals.

For new workers, the use of a cathode ray oscillograph, giving an excellent visual pattern of the pulses, is recommended. The counter set is fitted with amplifier and external connections for this purpose. The Cyclotron 401-A Impulse Register is also widely used by itself for high speed impulse recording or mechanical operation counting.

Cyclotron Specialties Instruments are quickly assembled into a complete radioactivity apparatus... 

The sample to be tested is placed in an ashing dish where its radioactivity is transmitted into the Geiger Tube through the latter's thin mica window. Impulses from the tube are amplified and extinguished by a First Stage. This passes the impulses on to the Counter Set where they are amplified, scaled on a scale of eight and indicated on the Impulse Register.

**IMPULSE REGISTER**
Accurately registers up to sixty impulses per second, and will solve your problems in high speed impulse or mechanical operation counting.
Price, FOB factory $55

**GEIGER MULLER COUNTER**
An especially fine piece of equipment with numerous applications in radioactivity work. Price, FOB factory $345

**THIN MICA WINDOW GEIGER TUBE**
A compact, completely enclosed counter tube of sturdy construction with many important features. Used extensively by leading laboratories. Price, FOB factory $50

Cyclotron Specialties radioactivity instruments are rugged and practically foolproof...made from the highest grade materials and designed for dependable performance under actual working conditions. Place your order now by mail.

AEROBIOLOGY

An A.A.A.S. Symposium

Aerobiology consists of the papers of a symposium presented at the meeting of the Association held in Chicago on September 22-24, 1941, in connection with the celebration of the fiftieth anniversary of the founding of The University of Chicago. The symposium was organized by the Section on Medical Sciences and the Committee on Aerobiology of the National Research Council, under the direction of Dr. E. C. Stakman, Dr. Stuart Mudd, Dr. E. B. Lambert, and Dr. Malcolm H. Soule.

The volume consists of two distinct parts, extramural aerobiology and intramural aerobiology. Extramural aerobiology, in which part there are eight papers, is concerned with the distribution of living organisms by the exterior air and with some of the consequences of their distribution. It includes within the field of interests insect population, plant pathogens, and fungus spores.

Intramural aerobiology, in which part there are 29 papers, is equally diverse and important. It begins with the problem of contagion by air-borne infectious materials. It investigates the expulsion of secretions from the mouth and nose in the acts of sneezing and coughing; it follows the infections from the dissemination of pathogenic organisms into the operating room, the hospital ward, the cubicle for infants and the school and the home.

By the Second Semester . . .
They Know "Pyrex" Test Tubes Last Longer

"It doesn't take long," one science teacher reports, "for students to discover Pyrex test tubes are better. By the second semester the whole class wants Pyrex test tubes."

Not only students but teachers, department heads and purchasing officials all have learned by experience that "Pyrex" test tubes are more economical because of their longer life.

That is why more and more schools are following the example of industrial laboratories. They are standardizing on "Pyrex" laboratory glassware—test tubes, beakers, retorts, flasks, funnels, etc. Compare its cost by the year—not by the piece.

"Pyrex" is a registered trademark and indicates manufacture by CORNING GLASS WORKS · CORNING, N.Y.

SEMAT
Introduction to Atomic Physics

Ready in March  Prob. pp. 384, prob. price $4.00

This successful text for the one-semester course in atomic physics, by Henry Semat, Associate Professor of Physics at the College of the City of New York, has now been brought up to date. Highlights of the revision include—

1. Major changes in the section on The Nucleus.
2. New material on the discovery of new elements, sources of nuclear energy, the measurement of nuclear magnetic moments.
3. More extensive treatment of the production of transuranic elements, the fission of nuclei, and nuclear isomers.
4. A description of the betatron with diagrams and photograph.

If you teach atomic physics, write for an examination copy

This text by

SEMAT
Fundamentals of Physics

593 pp.  $4.00

Develops the fundamentals of physics with thoroughness and clarity, in a scope restricted to that actually attainable in a first-year college course. SEMAT is an unusually teachable book. Numerous illustrative examples are solved in detail, to crystallize many physical concepts for the student, and to show him the correct method of solving physical problems.

If you teach introductory college physics and do not know this book, write for an examination copy

SCIENCE—ADVERTISEMENTS

A Coming Event

BASIC COLLEGE CHEMISTRY

By JOSEPH A. BABOR, Associate Professor of Chemistry,
College of the City of New York

A really modern yet teachable text for post-war courses based on
atomic structure and a new periodic table.

1. INTRODUCTION TO CHEMISTRY: Scientific Laws; Mixtures; Compounds; Elements; Symbols; Energy and Chemical Change.

2. SOME FUNDAMENTAL CONCEPTS: Matter; Atoms; Molecules; Gases; Energy.

3. ATOMIC THEORY AND ATOMIC STRUCTURE: Atomic Theory; Electrons; Neutrons; Radioactivity; Atomic Number; Atomic Structures; Valence.

4. CLASSIFICATION OF THE ELEMENTS: Types of Elements; Electron Transfer in Chemical Change; Non-ionic vs. Ionic Compounds; Coordinate Valence and Complex Ions; Periodic Table; Bridge Element.

5. OXYGEN AND OZONE: Oxygen; Acid and Base; Critical Temperature; Oxidation; Combustion; Avogadro's Hypothesis.

6. HYDROGEN: Properties and Uses; EMF Series; Copper; G.M.V.; Isotopes; Heavy Water.

7. MOLECULAR AND ATOMIC WEIGHTS: Deviations from Gas Laws; Molecular Weights; Atomic Weights; Valence; Equivalent Weights; Problems.

8. WATER AND HYDROGEN PEROXIDE: Properties and Uses; Liquid State; Vaporization; Hydrates; Water Cycle; Potable Water; Hydrogen Peroxide.

9. THE ALKALI METALS: Properties vs. Atomic Number; Preparation and Uses; Salt; Spectroscope.

10. THE HALOGENS: Properties vs. Atomic Number; Preparation and Uses; Compounds.

11. ACIDS OF HALOGENS: Preparation, Properties, and Uses; Relation of Properties and Atomic Configuration; Nomenclature.

12. OXIDATION—REDUCTION: Valence Number; Balancing Equations; Ionic Equations.

13. SOLUTIONS: Solute; Solution; Types of Solutions; Normal and Molar Solutions; Irremissable Solvents; Henry's Law.

14. CHEMICAL EQUILIBRIUM: Reaction Velocity; Law of Mass Action; Equilibrium; LeChatelier's Law.

15. EQUILIBRIA OF SOLUTIONS: Vapor Pressure of Solutions; Mole Fraction; Boiling and Freezing Point Changes; Molecular Weights; Fractional Distillation; Constant Boiling Mixtures.

16. SOLUTIONS OF ELECTROLYTES: Electrolytes; Conductance; Equilibrium Constants; Defects of Arrhenius Theory.

17. MODERN THEORY OF IONIZATION: Ionic Compounds; Crystals; Role of Solvent; Types of Electrolytes; Acid vs. Base; Conjugate Theory; Weak Electrolytes; Activity Coefficients.

18. IONIC EQUILIBRIA AND IONIC REACTIONS: Ionization of Water; pH Indicators; Hydrolysis; Titration; Buffers; Water Softening.

19. THE ATMOSPHERE AND THE INERT GASES: Humidity; Gases; Ventilation; Air Conditioning; Liquid Air; Inert Gases—Properties and Uses.

20. NITROGEN AND AMMONIA: Preparation, Properties, and Uses; Ice Furnace; Liquid Ammonia; Liquid Nitrogen as a Solvent.

21. OXYGEN COMPOUNDS OF NITROGEN: Preparation, Properties, and Uses; Oxides of Nitrogen; Acids; Nitrogen Cycle.

22. ELEMENTS OF THE SULFUR FAMILY: Characterization of Elements; Group vs. Atomic Number; Preparation and Uses; Sulfides.

23. OXYGEN COMPOUNDS OF SULFUR: Oxides and Acids of Sulfur; Preparation, Properties, and Uses; Manufacture of Acid.

24. THE PHOSPHORUS FAMILY: Properties vs. Atomic Number; Preparation and Uses; Match Industry; Hydrides; Tests.

25. METALS OF GROUP 2: Properties vs. Atomic Number; Preparation, Hard Water, Salts; Uses; Analytical Reactions.

26. ELEMENTS OF GROUP 3: Properties vs. Atomic Number; Preparation and Uses; Bridge Element; Aluminum; Cement.

27. CARBON AND SILICON: Atomic and Crystal Structure; Allotropic Forms; Preparation, Properties, and Uses; Organic Chemistry; Crystal Structure of SIO; Silicates and Glass.

28. GERMANIUM, TIN, AND LEAD: Metallurgy; Properties and Uses; Compounds; White Lead; Paint.

29. REVIEW OF THE REPRESENTATIVE ELEMENTS: General Characteristics of the Representative Elements; Groups and Periods; Melting Points and Densities vs. Atomic Number; Hydrated Ions; Ionic Radii and Charge on Ions vs. Properties.

30. THE RELATED OR TRANSITIONAL METALS: Density and Melting Point vs. Atomic Number; Groups and Periods; Chemical and Physical Characteristics of the Metals.

31. METALS AND METALLURGY: Crystal Structure of the Metals; Important Metals; Metallurgy; Electro-metalurgy; Physical and Chemical Properties of the Metals; Solubility of Metal Salts.

32. IRON, CORALIC NICKEL, AND THE PLATINUM METALS: Metallurgy; Properties and Uses of the Metals; Blast Furnace; Compounds; Analytical Reactions.

33. COPPER, SILVER, AND GOLD: Coinage Metals; Properties and Uses; Metallurgy; Refining; Compounds; Complex Ions; Photography.

34. ZINC, CADMIUM, AND MERCURY: Properties and Uses; Metallurgy; Compounds; Analytical Reactions.

35. THE METALS OF GROUPS 11, 12 AND 13: Properties and Uses; Metallurgy; Chromates and Permanganates; Oxidation-reduction.

36. GROUPS 9 AND 10, AND THE RARE EARTH ELEMENTS: Occurrence; Preparation; Special Properties and Uses.

37. RADIOACTIVITY AND ATOMIC ENERGY: Story of Radium; Radioactivity; Displacement Law; Half-Life Period; Isotopes and Isobars; Atomic Transmutation; Artificial Radioactivity; New Elements; Atomic Energy; Atomic Bomb.

38. ELECTROCHEMISTRY: Electrical Units; Electrode Potentials and Primary Cells; Types of Cells; Polarization and Discharge Potentials; Secondary Cells; Corrosion and Its Prevention.

39. COLLOIDAL CHEMISTRY: Size of Particles; Dispersions; Preparation of Colloids; Electrical Properties of Colloids; Adsorption; Importance of Colloids.

40. ORGANIC CHEMISTRY: Importance of Structure in Organic Chemistry; Isomerism; Classification; Hydrocarbon Series; Petroleum; Rubber; Polymerization; Derivatives of Hydrocarbons.

41. CARBOHYDRATES, FOOD AND NUTRITION: Photosynthesis; Classes of Carbohydrates; Fermentation; Celluloses; Digestion of Foods; Minerals in Food; Vitamins; Hormones.

APPENDICES: Tables; Mathematical Operations . . . Exponential Arithmetic, Logarithms, Significant Figures; Logarithms and Antilogarithms.

700 pps. (approx.) 145 fgs. $3.75 (probable)

THOMAS Y. CROWELL CO., 432 Fourth Ave., New York 16, N. Y.
Science Books of Unusual Interest

PLANT GROWTH $3.00
by L. EDWIN YOCUM

The author goes beyond the superficial, often misleading descriptions of plant growth by getting down to the very essentials of the influence of soil, water, temperature, and air on the plant from the seed to full maturity. The work is complete with clear illustrations which give the reader a vivid picture of plant growth.

Some sample subjects treated in the work, all with a high practical viewpoint, are: Seeds and Seedlings, Germination of Seeds, Root Structure and Stems and Buds, Absorption of Water, Mineral Food and the Soil, Insects and Diseases, Weeds, Flowers, Hybridizing, Plant Hormones, Soil Improvement, Fertilizer, and Rest Period of Plants. Illustrated with line drawings.

ROCKS AND RIVERS OF AMERICA $4.00
by ELLIS W. SHULER

A thesaurus of interesting facts about the earth itself, this book will be found to be readable by both the scientist and the interested amateur geologist and by those who want to increase their enjoyment and understanding of the earth's surface.

Included in this book is the story of the landscape, of the soils, and of the caves, sinkholes, natural bridges, volcanos, lakes, waterfalls, canyons and mountains of America.

The author presents the story also of many interesting natural phenomena, such as famous landslides, volcanic eruptions and strange earth formations. Beautifully illustrated with 105 photographs.

LIFE HISTORY OF AN AMERICAN NATURALIST $3.00
by FRANCIS B. SUMNER

Nothing is quite safe from Sumner's searching, unrestrained judgments. Birth control, vivisection, sex, religion, education, racial prejudice, modern poetry, spurious trends in science, popular delusions—all come within the scope of his interest.

Not a routine autobiography but a book full of humor and insight, rich in thinking and of unusual interest to any thinking person.

The "profiles" of the men he admired or resented are cutting and brilliant. He subjects himself and his family to a rather merciless analysis. He weaves in rare stories about himself, his family and his contemporaries.

BRAZIL: ORCHID OF THE TROPICS $3.50
by MULFORD and RACINE FOSTER

The Fosters take you through endless coffee fazendas across western Brazil and through the greatest swamp area in the world to the Bolivian border in a private "administration" car, and by special truck and by canoe.

Courageously and with true scientific spirit, they entered the South American hinterlands in search of orchids, bromiliads and cacti, treetop inhabitants of the jungle gardens of Brazil. The deeper they went into the malarial swamps of Brazil, the more beautiful and rarer they found the orchids—some of them hanging in 100-pound clusters in the fever-logged air. 141 unusually fine photographic illustrations.

LEA & FEBIGER

Philadelphia 6, Pa.
We feel very privileged to invite you to visit our exhibit at the meeting of the American Association for the Advancement of Science to be held at St. Louis, March 27-30, 1946.

As publishers of ENEMY SCIENTIFIC AND TECHNICAL PERIODICALS AND BOOKS which we have reprinted under license of the United States Office of Alien Property Custodian, we are especially proud to announce the continuation and expansion of our republication program. We have presented over 637 foreign books and periodicals of vital scientific and technical interest to the American scientist.

In addition, we are planning a second printing of THE CATALOG OF BOOKS REPRESENTED BY LIBRARY OF CONGRESS PRINTED CARDS (167 volumes). We shall be pleased to receive your inquiries and advance requests for this publication.

We are also publishing THE BRITISH MUSEUM CATALOGUE OF PRINTED BOOKS by subscription under the auspices of a Committee of the Association of Research Libraries and by consent of The Director, Sir John Forsdyke, and the Trustees of the British Museum.

Concisely, we are delighted to report that we are constantly adding to our list of valuable publications and will continue to enlarge our ability to serve front-line scientists.

Faithfully,

J. W. EDWARDS, President

pH METER

Laboratory Model G

This instrument is recommended for all types of research and precise laboratory pH investigations where maximum versatility and accuracy are essential. It is also ideal for measurement of oxidation and reduction potentials.

Features include:
Continuous indication of circuit unbalance (eliminates the key tapping of ballistic methods).
Built-in temperature compensation.
Direct millivolt readings for oxidation-reduction measurements.
Sealed glass electrodes are small and unusually sturdy; require minimum maintenance.
Determinations can be made on exceedingly small (0.005ml) samples by the use of the proper electrodes.

Supplied ready for work in cabinet with lock and key, self-contained standard cell, electronic tubes and batteries; the 2½" glass-Calomel electrode assembly for pH work on 3ml samples, buffer solution for standardizing, saturated KCl solution for the calomel electrode. Cabinet size 11½ x 11 x 9", net weight 20 lbs.

No. 75210 Beckman pH Meter, Laboratory Model G complete ............ $205.00

Available for Prompt Delivery
Dependable Dissection Material

Turtox specializes in the preparation of dependable dissection specimens and maintains very large and complete stocks at all times. The photograph at the left shows a corner of one of our preparation laboratories where cats are being embalmed and injected.

Turtox Aids for Teachers

To teachers, research workers and others who are working in any branch of the biological sciences, General Biological Supply House offers the following gratis materials:

Turtox Service Leaflets. A series of fifty illustrated leaflets dealing with laboratory methods, teaching problems, field work, and other matters of interest to biology teachers.

Biological Field Work. A 100-page, pocket-size booklet, dealing with field collecting and listing the leading biological stations of the United States and Canada.

Turtox News. A monthly bulletin, now being mailed to more than 30,000 biologists in the United States and more than fifty foreign countries.

Turtox Biology Catalog. A 450-page handbook of supplies and equipment for the biological sciences.

Meet Us in St. Louis in Booth No. 45 of the Science Exhibition of the A.A.A.S.

THE SIGN OF THE TURTOX PLEDGES ABSOLUTE SATISFACTION
Progress

...At a Glance

The POUR-O-VAC seal at last bids farewell to wasteful, inconvenient and questionably scientific method of sealing and handling surgical fluids.

Highlight features include—

- A practical vacuum closure for solutions, the sterility of which, during long storage periods, may be constantly determined without breaking the seal.
- Presents a sterile lip which will not contaminate contents when poured.
- Serves a secondary purpose of providing a dust-proof seal for remaining fluid when only partial contents of a container is required.

Fits All Four—
One Pour-O-Vac Seal will fit all 500, 1000, 2000 and 3000 ml. Fenwal Containers

Reusable...they may be sterilized repeatedly

A Time and Money Saver, Too!
Eliminates waste of unused or out-dated solutions.

No time-consuming or wasteful use of gauze, paper, string or tape.

Protects lips of containers against chipping or breakage.

Nurses will welcome the ease and simplicity with which sealing, unsealing and handling are accomplished.

Order today or write immediately for further details

Wave Makers

“A leaping trout awakens the still pool to life in waves that move in silent rhythm.”

In the same way, when you speak over the telephone, vibrating electric currents speed silently away with the imprint of your voice over the wire and radio highways of the Bell System.

Tomorrow, the vibrations will be the living pictures of television. All are examples of wave motion.

How to produce, transmit and receive electrical wave motion is the basic problem of the communication art.

Bell Telephone Laboratories, which exist primarily to invent and develop better communications for the Bell System, devote the teemed efforts of physicists and mathematicians to the production and control of electric waves in all forms.

Out of these studies have come discoveries which keep the Bell System at the forefront of the communication art.

A.H.T.CO. SPECIFICATION

QUALITATIVE FILTER PAPER

Suitable for analytical purposes other than those requiring the use of an acid washed paper.

QUALITATIVE FILTER PAPER, A.H.T. Co. Specification. A white paper with embossed surface, made of carefully controlled 100% rag stock of uniform texture.

Suitable for analytical purposes other than those requiring the use of an acid washed paper, or one which completely retains fine precipitates such as Barium Sulfate. Weight of ash is exceptionally low for unwashed filter paper, i.e. approximately 0.0006 grams per 110 mm circle, as determined by improved tests recently developed by the U. S. Bureau of Standards. See Research Paper RP1658, Journal of Research of the National (U.S.) Bureau of Standards, Vol. 34, No. 5 (May, 1945), pp. 453 to 458.

Wet bursting strength, surface hardness and filtering speed all have been considered carefully in the manufacture to provide a paper which is useful both in education and in industrial laboratories.

5160. FILTER PAPER, QUALITATIVE, A.H.T. CO. SPECIFICATION, as above described. Sizes up to and including 380 mm diameter are packed in convenient cardboard carton containing 100 sheets.

LOOK AT YOUR MEDICAL SLIDES
AND MICROFILM THIS EASIER WAY

This beautiful new instrument is ideal for quick
easy viewing of medical slides and microfilm.
Large 3½" viewing lens permits two-eye vision in
ordinary light without darkened room or projec-
tion screen. Dual ground and polished lenses in a
focusing mount give a clear, brilliant, undistorted
2½x image. Right or left hand feed provides back
and forth comparison of slides. Sturdy, unbreak-
able metal base finished in rich neutral brown;
rubber, non-scratching feet. Operates cool. Won't
harm film. A.C. or D.C. current.

X-Ray Adapter—$1.00
Leatherette Covered Wood Carrying Case—$8.50

**FILING CABINETS for KODACHROMES**

**LANTERN SLIDES**

**MICROSCOPE SLIDES**

**ADAMS SECTIONAL SLIDE CABINETS**

featuring 5 interchangeable units

A new design in slide cabinets utilizing individual sectional units to accommodate 2 x 2" lantern slides, 3½ x 4" lantern slides, 3 x 1½", 3 x 1¾", and 3 x 2" prepared microscope slides. The units vary somewhat in height but have a constant width and depth so that they stack one on the other.

**ADAMS SLIDE CABINETS**

for 3 x 1" MICROSCOPE SLIDES

Adams Microscope Slide Cabinets have a capacity of 2,760 3 x 1" microscope slides. They are attractive natural grained, light oak stained plywood, 14" wide by 19½" high by 22" deep. They have 8 drawers—each drawer holds 345 3 x 1" microscope slides in three rows of numbered slots giving a total cabinet capacity of 2,760 slides. Adams Microscope Slide Cabinets can be nested interchangeably with Adams Kodachrome Slide Cabinets.

for 2 x 2" KODACHROME SLIDES

Adams Kodachrome Slide Cabinets have a capacity of from 2000 to 6000 2 x 2" Kodachrome slides, depending on whether individual separators or group separators are used and the method of binding. Kodachrome Slide Cabinets have the same outside dimensions as the Microscope Slide Cabinets, but have 10 drawers. Each drawer has two columns of numbered slots. Where individual partitions are wanted, small cardboard rectangles the same height as the slots are used. Where group dividers are wanted the red fibre dividers with labels are used. In the illustration note that group dividers or individual partitions can be used interchangeably as the need demands.

**ADAMS SLIDE TRAYS and SLIDE CABINETS**

There are three units of equipment.
1. SLIDE TRAYS for holding the microscope slides
2. SLIDE TRAY CABINET for holding the trays
3. SLIDE TRAY ROLLING STAND for transporting the cabinets

These Slide Trays for handling and storing microscope slides will find immediate use by all those who have to prepare and handle quantities of microscope slides, such as is the case in colleges, hospital and research laboratories. Teachers have found them especially valuable for distributing student loan collections during class periods. In the latter case where the same laboratory is used for more than one class, the cabinet mounted on the rolling stand will be found most useful.

**CLAY-ADAMS CO INC.**

44 EAST 23rd STREET, NEW YORK 10, N. Y.
Scientists everywhere have waited with eager anticipation the resumption of A.A.A.S. meetings. Now the wish has become reality and Saint Louis will be the center of the scientific world for the four days of March 27 through 30.

An important part of the A.A.A.S. meetings has always been *THE SCIENCE EXHIBITION*. The suppliers of scientific items are a unique group of commercial people. The demands of this present day world require mass production of much that scientists use . . . and withal, these suppliers—your suppliers—have maintained that instinctive pride that was the essence of the earlier craftsman's drive for perfection.

So plan now to visit *THE SCIENCE EXHIBITION* and the representatives of firms who will be there to show you the latest developments of their companies. The main registration booth of the meeting will be located in the center of the exhibition and the exhibition area will be open from eight thirty in the morning to six in the evening.
