MUSIC IN NATURE

Four 12-inch records which contain over 50 bird songs and animal sounds as part of a nature study talk. There is an informal discussion of the five elements of music—time, tone, tune, timbre, touch—in relationship to the songs and sounds, which are reproduced by Professor Miller’s own vocal and whistled imitations.

Four flexible discs, seven sides recorded, 12 inches.

LUMETRON Colorimeter MOD. 450 for Nessler Tubes

A new photoelectric instrument for the accurate measurement of pale colors and faint turbidities.

- For all colorimetric determinations in which only a slight coloration can be developed.
- For sanitary examination of drinkable water and for analysis of water for industrial purposes.

Replaces all visual comparison tests in Nessler tubes.

The New
Howell-Fulton’s Physiology

- "Will be surprised if this text does not replace every physiology on the market for it is so much more up-to-date. The material on hemodynamics is so infinitely superior that it alone should ensure wide adoption. The section on cardiac output is at least three years ahead."
- "A useful and up-to-date text that reflects the spirit of the times."
- "An excellent text . . . will be recommended to our students."
- "A wonderful book . . . will take pleasure in recommending it to my students."
- "An extremely worthwhile contribution."
- "As an exposition of fundamental physiology, excels any book at present available. Highly recommended."

Some of the New Features of the NEW (15th) EDITION

Newer concepts of high altitude physiology.

New work in the field of gastro-intestinal physiology.

Section on basal metabolism includes recent disclosures on the part played by endocrines and the central nervous system in the integration of metabolic processes.

The large literature on sensory problems is coordinated in easily understood terms.

A completely rewritten section on muscle and nerve, and largely revised chapters on the central nervous system.

Completely revamped section on the cardiovascular system.

The entire section on the physiology of sex rewritten.

A completely revised discussion of water metabolism and the kidney bringing it into line with current teachings.

Edited by John F. Fulton, M.D., Sterling Professor of Physiology, Yale University School of Medicine, with the Collaboration of 10 Other Authorities. 1304 pages, 6" x 9¼", 507 illustrations, many in colors. $8.00

INORGANIC CHEMISTRY

JONES—INORGANIC CHEMISTRY
A new text for beginning college students. It can be successfully presented to various groups of students whether or not they have had previous instruction in chemistry. Atomic structure is presented early and Group III elements are given first. Incorporates new teaching aids. Ready for fall classes. Price $3.75

ORGANIC CHEMISTRY

HILL and KELLEY—ORGANIC CHEMISTRY
A rigorous college course for the beginning student. It introduces the newer concepts of atomic structure, linkages, bond, resonance, hydrogen bridges. A new approach, systematic and logical, yet explicitly practical. 919 Pages. $4.00

WERTHEIM—TEXTBOOK OF ORGANIC CHEMISTRY, 2nd Edition
A year's course for beginning college students, for majors in chemistry, premedical or chemical engineering and for specialists in organic chemistry. Up-to-date treatment of electronic structures and formulas, acrylics, butadiene, nylon, octane ratings, plastics, synthetic rubber, sulfur drugs, vitamins, etc., is included. 113 Illust., Flow Sheets; Molecular Models in Color; 867 Pages. $4.00

WERTHEIM—INTRODUCTORY ORGANIC CHEMISTRY
It will teach the principles of organic chemistry and effect a liaison between previous work done and that to follow. 82 Illust. 482 Pages. $3.00

WERTHEIM—LABORATORY GUIDE FOR ORGANIC CHEMISTRY, 2nd Edition
Presents a wide variety of experiments. A section on "spot tests" is included. 24 Illust. 560 Pages. $2.00

WERTHEIM—EXPERIMENTS IN ORGANIC CHEMISTRY (Includes Biochemistry)
A symmetrical program of laboratory work for a semester course. 34 Illust. 221 Pages. $1.35

This new "LAB-AID" cabinet is the ultimate solution to the filing problems encountered in the laboratory. It is of welded-steel, fire-resistant construction throughout. Files 3" x 1" or 3" x 2" microslides, 2" x 2" transparencies, large lantern slides, index cards, even paraffin blocks... in single-row drawers, all fitting interchangeably into a smooth-tracking master drawer-rail system. Unit-sections, assembled in any combination, can be used singly, or stacked to any convenient height. With all these advantages, the cost-per-slide capacity in the "LAB-AID" cabinet is the lowest ever. Investigate this remarkable equipment... the coupon will bring details.

A single "LAB-AID" unit-section. Any combination of drawers can be supplied.

By merely dropping in a patented "LAB-AID" slotted liner, any drawer is converted from storage filing to individual-slide filing, or vice-versa.

BESELER
MODEL OA2
finest OPAQUE PROJECTOR made

Ready for Delivery NOW!

If you need a projector now—BESELER can give you delivery now...and the BESELER MODEL OA2 is the projector you should buy for unmatched screen illumination.

The BESELER MODEL OA2 offers many advantages. You can obtain perfect opaque or transparent projection simply by pulling a lever and switching to the type of projection you require. It is not necessary to adjust the instrument for distance, as the lens system is perfectly matched. The BESELER MODEL OA2 faithfully projects every detail and color of innumerable objects...Coins, Stamps, Book Pages, Slides, Pamphlets, Films, Postcards, Snapshots, Clippings, Magazine Articles and Advertisements, etc., etc. Takes Standard Slides and Opaque Material up to 6¼" x 6¼". Special film attachment accommodates 35 mm. film and 2" x 2" Kodachrome slides.

THE BEST PROJECTOR IS THE BESELER PROJECTOR

(A non-profit organization for the advancement of teaching and research in physiology and allied sciences)
hilus. The donor’s ovary is secured in position in the capsule of the recipient with several fine catgut sutures and the capsule closed. Ovariectomy and transfer are performed on both sides at the same operation.

In both of the successful transfers the donors were bloodhounds and the recipients foxhounds. The bloodhounds were eight years old and had passed the period of productive breeding. The foxhounds were young animals, and each had whelped and raised one litter previous to transfer. Both were in oestrus at the time of operation.

Following transfer, signs of oestrus decreased gradually over a period of four or five days but then recurred in full intensity and continued for a normal cycle of 20 days. Both dogs copulated during this period, but neither conceived. The dogs were followed carefully thereafter, and it was with considerable surprise that signs of a second oestrus were observed 49 days after the start of the previous period in one animal and on the 98th day in the other. It appears significant that such periods of heat do not correspond with the recipient’s previous history, but on the contrary, represent a continuation of the bloodhound donor’s cycles.

One of the dogs was killed for study 70 days after termination of the second oestrus. The ovaries appeared normal on gross examination, and histological section showed corpora lutea and innumerable follicles in various stages of maturation. An estimation of the number of follicles was not attempted, but it was at once apparent that they greatly exceeded the quantity normally found in the ovary of an eight-year-old dog. The hilus was of interest particularly in its content of blood vessels. Some of them were normal in appearance, filled with blood cells, and undoubtedly represented vascularization of the transplant by the new host. Others were necrotic or showed the extensive hyalinization characteristic of the senile ovary.

The behavior of the animals after operation as well as the morphology of the transplanted organs attest the successful transfer of ovaries between dogs of different breed. It is significant that each of the successful transfers was effected during the recipient’s oestrus and that numerous experiments performed on other periods of the sexual cycle terminated in failure. The continuation of the donor’s cycle after transfer was contrary to expectation and suggests that the initiation of oestrus is a function of the ovary rather than of the pituitary. These studies are being continued and will be reported in more detail in a later publication.

Work of the International Commission on Zoological Nomenclature

Throughout the war and since, the International Commission on Zoological Nomenclature has received much practical help and encouragement from American zoological institutions and from individual American zoologists. This has greatly contributed to the success of the efforts of the Commission to develop its work and thereby raise

LOUIS AGASSIZ AS A TEACHER

By Lane Cooper

A collection of illustrative extracts showing the methods of instruction used by the eminent naturalist, who was one of the most influential zoologists ever to teach in America. Four of his distinguished pupils tell in their own words the process by which they were led to see the various forms of nature through direct and independent observation. This is a book that should be in the hands of all teachers, and of those who are preparing to teach.

"Every teacher of zoology, not to mention other subjects, ought to obtain this book and ponder it. To the extent that Agassiz influences him he will become a teacher of his subject, not merely about it."—BIOS
