EXTRA YARDAGE WITH THE WIND!

In golf, a favorable wind—in the research field, superior working materials—can make a big difference in the final project.

Hoffmann-La Roche, for many years, has been producing superior vitamins “by the tons”. ROCHE standards for quality and pharmaceutical elegance assure dependable materials for your vitamin research.

Russell, West & Manwell's
Practical Malariology

This is a new book issued under the auspices of the National Research Council. Its purpose—admirably fulfilled—is to present under one cover the latest knowledge of Malaria; clinical, laboratory and field data. Its six sections deal respectively with the parasite, the mosquito, the man, the community, prophylaxis and control, and therapeutic malaria.

By Paul F. Russell, M.D., M.P.H., Colonel, M.C., A.U.S., Parasitology Division, Army Medical School; Luther S. West, Ph.D., Head of Biology Department, Northern Michigan College of Education; and Reginald D. Manwell, Sc.D., Professor of Zoology, Syracuse University. 684 pages, 6" x 9 1/2", 238 illustrations, 8 in color. $8.00.

Conant and Others'
Manual of Clinical Mycology

The National Research Council sponsored this manual in order to make available a really concise, clear-cut working knowledge of mycotic disease. The part of this manual in simplifying and clarifying this knowledge for those not extensively schooled in the field is immeasurable.

By Norman F. Conant, Ph.D., Donald Stover Martin, M.D., David Tillerison Smith, M.D., Roger Denio Baker, M.D., and Jasper Lamar Callaway, M.D.; Duke University School of Medicine. 348 pages, 5¼" x 7¾", with 288 illustrations on 148 figures. $3.50.

Mackie, Hunter & Worth's
Manual of Tropical Medicine

Also a National Research Council Manual. The authors have had wide first-hand experience and as a result their book has been recognized as one of the most complete coverages of tropical diseases in print. Distribution, etiology, epidemiology, clinical characteristics, prophylaxis, treatment and laboratory methods are all discussed.

By Colonel Thomas T. Mackie, M.C., Major George W. Hunter, III, Sn.C., and Captain C. Brooke Worth, M.C., A.U.S. 727 pages, 6" x 9", with 284 illustrations, some in color. $8.00.

Ash & Spitz' Atlas
of Pathology of Tropical Diseases

The first book of its kind. It contains 941 illustrations on 257 plates, some in color. These pictures were drawn largely from the Army Institute of Pathology and are remarkable for their third-dimensional characteristics. Amplified by concise text descriptions, this is a pictorial portrayal of the progressive tissue changes seen in tropical diseases.

By Colonel J. E. Ash, M.C., U.S.A., Director; and Sophie Spitz, M.D., C.S., A.U.S., Pathologist, the Army Institute of Pathology, Army Medical Museum. 350 pages, 8" x 10¼", with 941 illustrations on 257 plates, some in color. $8.00.

Communications relative to membership in the Association
and to all matters of business of the Association should be
addressed to the Administrative Secretary, AAAS, 1515 Mas-
achusetts Avenue, N.W., Washington 5, D. C.

Annual subscription, $7.50 Single copies, 25 cents

Entered as second-class matter July 18, 1923 at the Post Office at Lancaster, Pa., under the Act of March 3, 1879.
NUCLEAR PHYSICS TABLES
by J. MATTAUCH

and AN INTRODUCTION TO NUCLEAR PHYSICS
by S. FLUEGGE

CONTENTS
1. STABLE NUCLEI. Isotopes and Mass Numbers · Mass Defects · Nuclear Masses and Extraneucleaar Electrons · Relative Abundance and Atomic Weight · Nuclear Spin · Nuclear Magnetic Moment · Quadrupole Moment.
2. NUCLEAR REACTIONS.
3. UNSTABLE NUCLEI.
4. SYSTEMATICS OF STABLE NUCLEI.
1946. 7¾ x 10¾. 200 pages. 28 diagrams and numerous four-color plates.

Translated from the German and published with the consent of the Alien Property Custodian

MESON THEORY OF NUCLEAR FORCES
by WOLFGANG PAULI

CONTENTS
1. VARIOUS TYPES OF MESON FIELDS. Scalar Charged Meson Field · Pseudoscalar Symmetric Theory · Vector Field Theory.
2. THEORY OF EXTENDED SOURCE.
3. SCATTERING OF MESONS. Magnetic Moment in the Strong Coupling Case · Magnetic Moment in the Weak Coupling Case.
4. QUANTUM THEORY OF SCATTERING. Theory of Radiation Damping · Heisenberg's "Observable Quantities."
5. THEORY OF NEUTRON-PROTON SCATTERING.
6. STRONG COUPLING THEORY OF THE TWO-NUCLEON SYSTEM.
1946. 5¾ x 8. 80 pages.

Differential and Integral Calculus
by R. COURANT

Vol. I. 6 x 9. 630 pages. 2nd rev. ed. 1937. $5.00

A. H. T. CO. SPECIFICATION

MAGNETIC STIRRING APPARATUS

For variable speed stirring action within either closed or open vessels

MAGNETIC STIRRING APPARATUS, A.H.T. Co. Specification. A compact, quiet-running apparatus which utilizes a rotating field of magnetic force to induce variable speed stirring action within either closed or open vessels. Stirring is accomplished by means of a small magnetized bar A or B, sealed in Pyrex glass, which is placed in the liquid to be stirred and which is rotated by magnetic force applied below the container.

Consisting of a permanent bar magnet attached to the shaft of an electric motor and mounted in an aluminum housing with flat top 4½ inches diameter and 4⅛ inches high. Can be used either on the table or on a support rod, attached by means of a clamp with swivel joint.

Suitable for any stirring operation which involves 1 ml to 1 liter of liquids with viscosities up to that of a 50% glycerol solution. Particularly convenient for use in closed systems where:

- Gas volume changes must be observed, as in hydrogenation experiments;
- High vacuum or overpressure should be maintained;
- Moisture and air should be excluded, as in titrations involving the use of Karl Fischer reagent;
- Gas phase over the surface of the liquid should not be mixed into the solution;
- Change in turbulence is required without disturbance of heavier phase above stirred portion;
- Small containers are used, as in microchemical procedures.

Any type of vessel of glass, porcelain or non-magnetic metal can be used, i.e. flasks, beakers, culture dishes, crystallizing dishes, evaporating dishes, test tubes, weighing bottles, etc. A ring-type burner is suitable when stirring at elevated temperatures.

9235-R. Stirring Apparatus, Magnetic, A.H.T. Co. Specification, as above described, with one each stirring bars A and B, ¾-inch and 1½ inches long respectively, rheostat, 8-ft. connecting cord, and directions for use, but without glassware or other accessories. For 115 volts, 60 cycles, a.c. only ...... $2.35

More detailed information sent upon request.

The water temperature will be just right for smooth, even spreading: never too hot or too cold. No melting paraffin to distort tissues; no folds or wrinkles. No bubbles due to frequent water change... temperature stays constant day in, day out. Bulletin 6320 gives particulars: send for it.

TECHNICON COMPANY, 215 E. 149th St., New York 51, N. Y.
Strategic Stockpiles

FOR YOUR CONVENIENCE . . .

Scattered throughout the United States and Canada in convenient locations are stocks of Pyrex, Vycor and Corning brands of laboratory glassware. These are the inventories your laboratory supply dealer carries . . . carries for only one reason—YOU.

In a sense each of these inventories is personal. For all are different. Each is built-up and maintained for the selected group of customers served by a particular laboratory supply house. Stocks carried are based on the dealer's knowledge of his customers' needs and are always as complete and as well balanced as factory shipments permit. If your dealer hasn't a particular item, you may be sure the factory hasn't it either. That is why Corning Glass Works urges you to contact your dealer whatever your requirements may be. His is a professional service to professional men. He is the one who can serve you best. The closer you work with him the more time and money you save.

Corning Glass Works is proud of its dealers and wants all users of all its laboratory glassware lines to learn to know their nearest dealers better . . . and to use their services to the fullest extent.

"Pyrex," "Vycor" and "Corning" are registered trade-marks and indicate manufacture by

Corning means Research in Glass
The hat that became a headset

Telephone operators in New York, Atlanta and Montreal wore the strange head-dress you see above. It's a special gauging instrument—Bell Laboratories scientists used it to measure head contours in designing the new headset.

With the new set, the telephone user can hear the operator more clearly, and she in turn hears better too—through the improved receiver and transmitter. Her voice enters the transmitter at an even level because, as she turns, the mouthpiece moves with her. Neckstrap and horn are eliminated. The whole thing weighs less than six ounces.

The new Bell System headset brings together the latest techniques in voice transmission and the ideas of the operators themselves—offering comfort, convenience, and electrical efficiency.

Out of new knowledge has come this novel head telephone fitted to the operator and designed to improve your telephone service.
Special Diet Materials
FOR BIOLOGICAL PROCEDURES

Long-continued experimentation with animals in our own laboratories has led to the development of many special diet materials which we have found valuable in nutritional research. While the preparation of these materials in small quantities in the individual laboratory would be troublesome and costly, our production facilities enable us to offer them—conveniently packaged and economically priced—as a service to investigators engaged in biological assay and research.

VITAMIN TEST CASEIN GBI. Uniformly free of vitamins A and D, as well as the known factors of the vitamin B complex and vitamin K.

VITAMIN A TEST DIET, U. S. P. XII, GBI. For depletion of animals within allotted time-weight limits specified for Vitamin A assays.

RACHITOGENIC DIET NO. 2, U. S. P. XII, GBI. For depletion of animals within allotted time-weight limits specified for vitamin D assays.

VITAMIN B COMPLEX TEST DIET GBI. For use with suitable animals and experiments, to produce deficiencies of thiamine chloride, riboflavin, niacin, pyridoxine and pantothenic acid.

SALT MIXTURE NO. 2, U. S. P. XII, GBI. For preparing vitamin A test diet and also as a mineral source in the preparation of most laboratory diets.

WRITE for complete list and prices of these and other diet materials, including crystalline vitamins, amino acids, casein hydrolysate, biotin and other chemicals of biological significance.
