Machining to Tolerances of 3 Microns

OBJECTIVES are so accurately centered in Bausch & Lomb revolving microscope nosepieces that in changing from one objective power to another the magnified image is held within the field.

This requires exceptional mechanical precision. Upper and lower shells of the Bausch & Lomb nosepiece are machined to a fit tolerance of ±.000125" (3 microns). Stop slots for the objective holes are cut dead center. Center hole fit tolerance is ±.0001" (2.5 microns).

To meet these tolerances, Bausch & Lomb designed and built special lathes. One of these is the lathe shown in the above illustration, on which skilled, experienced machinists perform more than twelve different operations, including drilling, tapping, tapering, diamond turning, and threading.

Another typical example of B&L Quality—based on highest standards and craftsmanship.

Cooperating with Men of Science since 1853
AMINO ACIDS
for Research

Amino acids, the nitrogenous components of proteins, are of vital importance to adequate growth, maintenance and repair of tissue. As a service to nutritional research, GBI offers the following products in convenient-sized packages at an economical price:

- di-Alpha Alanine
- Beta Alanine
- L(-) Arginine Monohydrochloride
- L(-) Cystine
- L(+ ) Cysteine Hydrochloride
- L(+ ) Glutamic Acid
- Glycine (Ammonia-free)
- L(-) Histidine Monohydrochloride
- di-Isoleucine

- L(-) Leucine (Methionine-free)
- L(+ ) Lysine Monohydrochloride
- di-Methionine
- di-Phenylalanine
- di-Threonine
- di-tryptophane
- di-Tryptophane
- di-Valine

Write for our Descriptive Price List for complete information on diet materials, crystalline vitamins, microbiological media and miscellaneous biochemicals for research.

Announcing

A vitally important publication for all scientists and students of science.

RUSSIAN-ENGLISH TECHNICAL and CHEMICAL DICTIONARY

By LUDMILLA I. CALLAHAM, Technical Translator.

With the rapid technical development of the Soviet Union in recent years, scientists find increasingly important to refer to Russian language publications. Their exacting work calls for more than a vague translation, however; they must understand exactly what they read. Here is one of the first truly authoritative technical compilations available to them—a scientifically organized reference to 80,000 terms.

Nowhere else in one volume is there such a comprehensive coverage of organic and inorganic chemistry, chemical technology and mineralogy. Also included are the majority of terms used in metallurgy, mining, geology, engineering, physics, botany, pharmacy, and the more common terms in agriculture, medicine, aeronautics, meteorology, and military science. The author's primary objectives in preparing this book have been accuracy of definition and consistency of organization, both absolutely essential to scientists and students.

The book has been compiled so carefully and critically that it needs no support from other dictionaries or reference volumes. Since it is intended primarily for English-speaking scientists and students with a fair knowledge of Russian, it includes a general vocabulary of all types of words generally occurring in a technical article.

No effort has been spared to make this book thoroughly reliable and complete. Every available technical English-Russian, German-Russian, and straight Russian dictionary was checked, word by word. In addition, words were selected from Soviet textbooks and periodicals in the various fields, so that the book contains many words never before compiled in a dictionary. Wherever possible, each Russian technical term and its English equivalents were checked in several Soviet and American references, respectively. Clarifying synonyms follow the English equivalents where this is practicable, since many common words have special shades of meaning or even entirely different meanings when used technically.

HERE'S WHY Castle PRECISION INCUBATORS Give rigid temperature control

It is the Triple Wall of the Castle Precision Incubator that guarantees exactness in incubation. A water jacket enclosed by dead air space surrounds the chamber on all sides. Carefully regulated heat applied to the water in the jacket heats the chamber by radiation, which means uniform penetration throughout.

These triple-wall, water-jacketed incubators are preferred for these features:

¾° C. Uniformity: Never as much as a degree variation between top and bottom of chamber when loaded.

¼ to ¾° C. Constancy: Never more than a fraction of a degree variation at the thermometer—even though room temperature may fluctuate between 10 and 35° C.

Humidity: Fresh air circulates through chamber constantly. This air is preheated in tubes passing through water jacket.

98% Usable Capacity: Practically no space is wasted by heaters or controls, or by "hot and cold spots."

For further information on these Castle Precision Incubators, write: Wilmot Castle Co., 1212 University Ave., Rochester 7, N. Y.

Castle BACTERIOLOGICAL APPARATUS
Bacto-Agar
Bacto-Agar is a purified Agar prepared from domestic material. In the manufacture of Bacto-Agar extraneous matter, pigmented portions, and salts are reduced to a minimum, so that the finished product in the form of fine granules will dissolve rapidly, giving clear solutions.

Bacto-Asparagine
Bacto-Asparagine is a purified amino acid widely used in synthetic culture media and in the preparation of tuberculin.

NOW—The Only Book of Its Kind

DEATH MECHANISMS,
CAUSES AND
CERTIFICATION

By DR. R. P. MORHARDT
Pathologist
Autopsy Surgeon

An entirely new book devoted to the consideration of the significant complications of the common diseases encountered in daily practice. It clearly reveals how the complications promote terminal mechanisms and illustrates each entity with many representative death certificates. This is the first publication of its kind to reach the physician and should be included in every professional library.

First edition, 376 pages, $10.00 plus tax

A FORTHCOMING PRINCETON BOOK

THE Problem of Fertility

Edited by EARL T. ENGLE

THIS symposium covers the relation of fertility to the time of ovulation, the effect of the condition of the cervical mucus, and finally the motility, viability and fertilizing capacity of spermatizoa. Attention is given to human fertility as well as to that of laboratory and domestic animals.

The most recent advances in this field of research are presented in this collection of papers and discussions from the Conference on Fertility of the National Committee on Maternal Health, held in February 1946. It contains the work of 19 outstanding scientists, given in detail, and many others are represented in the discussions.

To be published in December, 320 pages, illustrated, $3.75

NEW YORK, N. Y.
LaMOTTE COMBINATION BLOOD CHEMISTRY OUTFITS

To meet the request of many physicians, the LaMotte Research Department has developed these compact outfits. They are ideal where space is limited. The outfit illustrated contains all necessary apparatus, reagents, etc., for determining gastric acidity, blood sugar, blood urea, icterus index and phenolsulfonphthalein renal efficiency. Price of outfit illustrated above S67.50 f.o.b. Towson, Maryland. Similar units containing other combinations of standard LaMotte tests can be furnished. Full information will be sent upon request.

*If you do not have the LaMotte Blood Chemistry Handbook, a complimentary copy will be sent upon request without obligation.

GEIGER-MUELLER COUNTER APPARATUS

G-M COUNTER SCALING UNIT
MODEL GS-4

- An all-purpose scaling unit, proved over a period of years to be positive and reliable. Scaling ratio choice of 2, 4, 8, 16, 32 or 64.

- Built-in input amplifier having a gain of 170. Adequate for use with all standard self-extinguishing counters.

- Variable high voltage power supply—regulation better than 4% of 1%.

- Universal impulse register driving circuit. No spurious counts can be introduced by power line transients.

- Custom construction and highest quality components assure continuous, trouble-free operation.

CHARGES FOR CLASSIFIED ADVERTISING

Regular setting 10¢ a word. Minimum charge $2.00 for each insertion. A box number counts as 8 words of the advertisement (e.g. 20 words plus box number equals 28 words). Make checks payable to the AAAS. All insertions must be accompanied by correct remittance and sent to the Adv. Dept. A.A.A.S. Please address replies as follows: Box number, SCIENCE, 1515 Mass. Ave., N. W., Wash. 5, D. C.

POSITIONS WANTED

The California Medical Bureau, Agency for scientific and lay personnel in medicine, biology, chemistry, physics, and allied sciences, supplies teachers, research workers, laboratory dieters, skilled office help. Prompt service. Registration free. Your patronage respectfully solicited. The California Medical Bureau, Agency, Arcade Medical Center, 606 Colorado Street, Pasadena 1, California.

Zoologist-Physiologist, age thirty-eight, B.S., M.S., further study, decade research experience, wishes teaching research position. Will be attending Boston meeting. Arrange interview through Box 658, SCIENCE.

Biochemist-biophysicist—woman, Ph.D. Two years experience in research (including both medical and industrial research) followed by three years teaching experience in first class eastern college since doctorate. Teaching experience includes courses in chemistry and physiology. Interested in teaching or industrial research. Will be attendingBoston meeting. Arrange interview through Box 657, SCIENCE.

Physicians, Laboratory and X-Ray Technicians, Bacteriologists, Pharmacists, Physical Therapists let us help you secure a position. Our service, established 1896, is nationwide. Write us today. All information confidential. Azon's Woodward Bureau, 50 North Michigan, Chicago 2.

Zoologist Ph.D. Department head in state college nine years seeks similar post in small university or large state college. Numerous publications on physiology of protozoa. Box 659, SCIENCE.

Physiologist, Ph.D., five years experience medical school teaching and research. Publications. Desires teaching and research position in mammalian physiology. Box 657, SCIENCE.

Plant Scientist, Ph.D., woman, with many-sided research experience in botany, horticulture and microbiology, desires permanent position to carry on research. Will attend Boston meeting. Arrange interview through Box 659, SCIENCE.

Zoologist, Ph.D. Broad Basic training in U. S. and abroad. Twenty years teaching experience and research. Publications. Now engaged. Seeks wider opportunity and happier conditions. Medical school experience in anatomical sciences, administration. Will be attending Boston meeting. Arrange interview through Box 670, SCIENCE.

Anatomist, Ph.D. Gross Anatomy, histology, embryology. Extensive teaching experience and research. Now engaged. Desires change to more satisfying conditions for teaching and research. Will be attending Boston meeting. Arrange interview through Box 668, SCIENCE.

Botanist, Ph.D. (Plant Physiology). Associate professor, twelve years successful experience, publications, Sigma Xi. Will be attending Boston meeting. Arrange interview through Box 676, SCIENCE.

Zoologist, Ph.D. Sixteen years successful teaching, research and administrative work. Publications, national societies, graduate students. Desires professorship with broader opportunities. Will be attending Boston meeting. Arrange interview through Box 659, SCIENCE.

Parasitologist-Zoologist, Ph.D. Experience eighteen years teaching and research. Desires similar position or teaching premedical subjects. Publications. Will be attending Boston meetings. Arrange interview through Box 665, SCIENCE.

Botanist, woman, Ph.D., Cornell, desires position teaching and research. Fives years teaching experience in leading woman's college. Research interests, publication. Will be attending Boston meeting. Arrange interview through Box 677, SCIENCE.

Plant physiologist-biochemist, Ph.D., excellent training, research and teaching experience; publications; veteran. Will be attending Boston meeting. Arrange interview through Box 664, SCIENCE.

Genetics, Cytology, Botany. Man, Ph.D. Fifteen years postdoctorate teaching, research, and chairmanship experience. Now employed. Publications. Desires position in botanical garden, university, or other institution where research is stressed. Minimum associate professor. No geographical restrictions. Will be attending Boston meeting. Arrange interview through Box 666, SCIENCE.

Sociologist-Anthropologist, at present assistant professor in major institution; three years' research fellowship, field work, publications; two years' successful teaching; five years' graduate study abroad; three major, two minor languages: bachelor, 41. Minimum: $4,000, institution with large library. Will be attending Boston meeting. Arrange interview through Box 654, SCIENCE.

Zoologist desires good opportunity in teaching or administrative position. Now adjunct professor of zoology and responsible staff member of government agency administering training with the Enemy Act. Background includes government biological science, economics, and foreign governmental liaison. Age 31, married, personable. Box 664, SCIENCE.

Bacteriologist; Ph.D.; several years' experience as hospital bacteriologist; four years, instructor in bacteriology, university medical school; five years, chief bacteriologist in charge of bacteriology laboratories, industrial company; for further information, please write BURNEICE LARSON, Director, The Medical Bureau, Palmolive Building, Chicago 11.

Entomologist, B.S., major entomology and zoology, minor botany and organic chemistry, thirty months experience, prefer position in northeast. Box 665, SCIENCE.

Biochemist: Ph.D. (minor organic chemistry, analytic chemistry, bacteriology) head of university department, desires university or college position. Box 667, SCIENCE.

Bacteriologist, Ph.D. Broad research experience. Desires medical school faculty appointment that will permit study toward M.D. Box 670, SCIENCE.

Zoologist, 65, wants teaching position in general zoology, biology or premedical zoology; conservation biology, or research in cytopathology—histology. Box 701, SCIENCE.

Experienced teacher of physical and theoretical chemistry, Ph.D., 36, desires a permanent college or university appointment. Available January 1. Box 702, Desires position in chemistry department.

Research Executive, Ph.D. Experienced in organization and execution of research in chemotherapy, antibiotics, virology and bacteriology. Practical and original outlook. Desires position with pharmaceutical organization. Box 664, SCIENCE.

Zoologist, Ph.D. Experienced teacher in histology, parasitology, and embryology. Desires teaching-research position. Will be attending Boston meeting. Arrange interview through Box 706, SCIENCE.
Personnel Placement

Positions Open

Biochemist for research and sales development work both in laboratory and in field. Ph.D. essential. Experience should include industrial work in more than one of the following fields: agriculture, sanitation, water treatment, insecticides, fungicides, bacteriology. The man for this position may now be in teaching or civil service. Details personal data, education, experience, publications; state salary expected, in reply. Box 684, SCIENCE.

Positions open for physicists to be responsible for development of general specifications and basic functional design of groups of optical instruments; and position open for engineer to develop detailed specifications of instruments for manufacture. Write Personnel Director, American Optical Co., Buffalo 15, N. Y. Representative at Boston Meetings A.A.A.S. Exhibition Booth #26 at Army.

Research Chemist, Wanted. For research department of large eastern public utility company. Ph.D. or D.Eng. in chemistry or chemical engineering, or equivalent research experience. Qualifications in physical chemistry and thermodynamics desirable. Replies will be treated confidentially. Give full name, experience, including salary. Representative will be in attendance at Boston meeting. Arrange interview through Box 673, SCIENCE.

Bacteriologist, special experience in oyster work. Full time research. Complete Civil Service protection. Gulf state. Box 672, SCIENCE.

Research Physicist. Wanted for research department of large eastern public utility company. Ph.D. or D.Eng. in physics or electrical engineering, or equivalent research experience. Should have experience in X-ray diffraction and other physical methods of identification or background for development in this field. Replies will be handled confidentially. Give full name, including salary. Representative will be in attendance at Boston meeting. Arrange interview through Box 673, SCIENCE.

Physiologist and Zoologist—Rank and salary based on qualifications, southern state. Will be attending Boston meeting. Arrange interview through Box 667, SCIENCE.

Applications are invited for the following positions: 1) Parasitologist: Duties to consist of full-time research on problems pertaining to parasites in wild animals. Applicant should be under 35 years of age with postgraduate training and research experience in hematology. Ability to conduct independent research essential. 2) Organic Chemist: Duties to consist of fundamental research in organic synthesis, preferably on the mechanism of organic reactions and the structure of some to research colleagues engaged on diene polymerization, cellulose derivatives, lignin utilization etc. Applicants should possess Ph.D. or equivalent in organic or physical chemistry, an understanding of modern theories of organic reactions and demonstrated ability to carry on independent research in this field. Address replies to: Director Research, Maple, Cargille, D. C., Scottdale, Pa.

Instructor in biology in catholic college in south. Will be attending Boston meeting. Arrange interview through Box 683, SCIENCE.

Instructor in biology in catholic college in south. Will be attending Boston meeting. Arrange interview through Box 683, SCIENCE.

(a) Director of research; physician who has specialized in one of the sciences preferred; should be well versed in the field of hypertension with considerable experience in pharmaceutic research; small company having excellent plans for expansion; Middle West; minimum $7,500. (b) Bacteriologist to become associated with department of obstetrics-gynecology, university school of medicine; preferably someone well qualified in general bacteriology and virus work; research project requiring at least two years and involving investigation of etiology of pelvic inflammations. (c) Physiologist; physician or Ph.D.; preferably someone with at least five years experience in physiological research; South. (d) Physician for position of developmental manager; small rubber company; preferably Ph.D. in physical sciences with industrial inclination and sufficient background of medicine; salary up to $7,500. (e) Assistant professor of biology; Ph.D. preferred, Master's degree eligible; preference for vertebrate zoologist; state university. (f) Bacteriologist; preferably Ph.D. to supervise department of bacteriology, one of the leading hospitals in California. (g) Two faculty members for college of pharmacy, university of the Middle West; one should be qualified to teach courses in pharmacy and the other in biological area including pharmacology, physiological chemistry, first aid and cosmetics; preferably men able to teach during summer quarters for next several years, at least. (h) Entomologist to divide activities between department of zoology and duties of extension entomologist in college of agriculture; duties consist of teaching courses in entomology, assisting in other courses in department of zoology and engaging in extension work in entomology largely connected with insect control problems; duties consist of half time teaching and half time extension work; East. S12-1, The Medical Bureau (Burneise Larson, Director), Palomino Building, Champaign 11.

Books

Journals, Periodicals, sets and runs. Also whole collections purchased for cash. J. E. Carle & Company, 900 Boylston Street, Boston 15, Massachusetts.

Laboratory Animals

Laboratory Animals—Guinea pigs, rabbits, white mice. Can be shipped 1000 miles and more with good satisfaction. Write, wire, or phone: Hilltop Caviary, Scottsdale, Pa.

Supplies and Equipment

Amino Acid & Protein Analysis by microbiologic methods. Hydrolyzate problems. Shinkman Laboratories, 2223 S. Santa Fe Ave., Los Angeles 21, Cal.

Sample Storage Set: Keeps 100 samples (8ml) in orderly arrangement, indexed; compact. Fine for organic preparations, reference samples. $3.25, complete, money-back guarantee. R. P. Cargille, 118 Liberty St., New York 6, N. Y.
RADIO FREQUENCY HEATING

gives you heat where you want it... as you want it

For many years, man has used external heat to harden, braze, solder, or anneal metals—to condition or otherwise treat such substances as rubber, textile fibers and the gluing of wood.

Now, through Electronic Radio Frequency Heating, science has achieved the modern miracle of heating without heat!

The outstanding feature of Induction Heating of metallic substances...and Dielectric Heating of nonmetallic substances...is the generation of heat within the material itself and at temperatures higher than ever before obtainable. Frequencies used range from 200 kilocycles to 50 megacycles.

Induction and dielectric heating have accomplished wonders in reducing production time and cost...controlling the rate and range of heating...improving quality and appearance of the product.

If you are interested in using this new production tool in your business, send for booklet B-3620—or arrange for a showing of our new sound motion picture in full color: "Radio Frequency Heating."

INDUCTION HEATING is ideal for hardening of gears (see above), contour hardening, brazing, soft soldering and annealing.

DURING THE WAR Westinghouse research engineers pioneered induction heating equipment for reflowing tin on electrolytic tin plate. Result: one pound of tin now does the work of three.

DIELECTRIC HEATING has many advantages over conventional heating in bonding plywood, molding plastic preforms, textile processing—and curing plastic laminates, rubber, etc.
DENTAL CAVITIES AND FLUORINE

Tooth decay is one of the most prevalent diseases of civilized man and of great importance from the standpoint of both the individual and public health. Statistics relative to dental defects among the millions of young men who served recently in our armed forces are startling. They bear out the general opinion of the dental profession that the yearly increment among American children of teeth requiring attention is greater than all dentists in this country could repair.

The Association’s previous symposium, FLUORINE AND DENTAL CARIES, published in 1942, covered the early history of the e-fly relation between fluoride and dental caries particularly in this country. This new symposium includes determinations of the differences in the chemical composition of teeth subject to dental caries of those which have been immune to dental caries. It also reviews investigations of the way in which fluoride inhibits dental caries. Reports from the British Isles, India, and South Africa, as well as the United States are presented.

List of Contributors
Wallace David Armstrong, M.S., Ph.D., M.D.
Professor of Physiological Chemistry, Director of the Laboratory of Dental Research, University of Minnesota, Minneapolis, Minn.
Francis A. Arnold, Jr., D.D.S.
Dental Surgeon, U. S. Public Health Service, National Institute of Health, Bethesda, Md.
Basil G. Bibby, B.D.S., Ph.D., D.M.D.
Dean, Tufts College Dental School, Boston, Mass.
Henry Trendley Dean, D.D.S.
Dental Director, U. S. Public Health Service, National Institute of Health, Bethesda, Md.
Harold Carpenter Hodge, M.S., Ph.D.
Professor of Pharmacology and Toxicology, The University of Rochester School of Medicine and Dentistry, Rochester, N. Y.
Philip Jay, M.D., D.D.S., Sc.D.
Associate Professor, University of Michigan, School of Dentistry, Ann Arbor, Mich.
Frank J. McClure, M.S., Ph.D.
Senior Biochemist, U. S. Public Health Service, National Institute of Health, Bethesda, Md.
T. Ockerse, M.D., D.D.S.
Dental Health Officer, Department of Public Health, Pretoria, Union of South Africa.
Reidar S. Sognnaes, T.L., Ph.D.
Assistant Professor of Dentistry, School of Dental Medicine, Harvard University, Boston, Mass.
Robert Weaver, M.D., D.P.H., L.D.S.
Abel Wolman, Hon. D. Eng.
Professor of Sanitary Engineering, The Johns Hopkins University, Baltimore, Md.

Table of Contents
(1) Some General Epidemiological Considerations. H. Trendley Dean.
(3) Epidemiological Studies in the British Isles and India. Robert Weaver.
(4) Fluorine and Dental Caries in South Africa. T. Ockerse.
(6) Chemical Differences of Caries Susceptible and Immune Teeth and a Consideration of Food Sources of Fluorine. Wallace D. Armstrong.
(7) Experimental Caries and a Discussion of the Mechanism of Caries Inhibition by Fluorine. Harold G. Hodge and Reidar F. Sognnaes.
(8) Non-dental Physiological Effects of Trace Quantities of Fluorine. F. J. McClure.
(9) Topical Applications of Fluorides as a Method of Combating Dental Caries. B. G. Bibby.
(10) The Possibility of Reducing Dental Caries by Increasing Fluoride Ingestion. Francis A. Arnold, Jr.

Price: To A.A.A.S. members, $3.00; To nonmembers, $3.50

Membership in the A.A.A.S.
Membership in the A.A.A.S. carries with it the privilege of obtaining the Association’s symposia at a more favorable rate than is allowed to non-members. The annual membership fee ($5.00) also includes a calendar year subscription to SCIENCE or THE SCIENTIFIC MONTHLY (both of which may be had by members for $8.00 per year). For further information about membership check the box on the coupon below.

Provide Both **HIGH POWER** and **LARGE FIELD**

—and both are necessary for inspection of minute details.

Designed by experts and manufactured by the same precision methods as Spencer Microscopes, these magnifiers are noted for their large, flat, brilliantly defined fields.

**UTILITY MAGNIFIER**

A 4.5 x DOUBLET giving an extremely large field, mounted on a horseshoe base that holds the lens at the proper distance.

**HAND MAGNIFIERS**

Magnifications for DOUBLETS range from 6x to 12x, and for TRIPLE AP-LANATS, from 6 x to 15 x.
