"MP 46-48°—completely solid below 46°C and melts sharply to a clear liquid above 48°C."

Such specifications accompanying listings in the catalog of Eastman Organic Chemicals* provide informative and appropriate indication of purity for organic research compounds.

These melting ranges (or boiling ranges in some cases) are actual observations reported by our control laboratory. We offer them as a statement of the minimum to be expected in uniformity and purity.

For less stringent work, some Eastman Organic Chemicals are also available in "Practical" grade—of sufficient purity for the usual laboratory syntheses—and in "Technical" grade, representing good quality commercial materials.

OUTSTANDING

MCGRAW-HILL BOOKS

THEORY AND APPLICATIONS OF ELECTRICITY AND MAGNETISM

By Charles A. Culver, formerly of Carleton College. 553 pages, $5.00

• Intended to serve as a basis for advanced study in theoretical physics, chemistry, and electrical engineering. In the chapter on radioactivity and atomic structure the material includes a treatment of the elementary theory of the betatron and nuclear fission.

HISTORICAL GEOLOGY. New second edition

By Russell C. Hussey, University of Michigan. 472 pages, $3.75

• A lucid and well-organized text covering the geologic history of North America and inhabitants throughout two billion years, with emphasis on broad panoramas of important events, rather than a mass of details. The new edition includes recent developments, with many new illustrations.

PHYSICAL CHEMISTRY

By the late E. D. Eastman, and G. K. Rollefson, University of California. International Chemical Series. 504 pages, $4.50

• Presents a compact, logical treatment of physical chemistry, designed for a course for third- or fourth-year college students. Discusses the structure of matter in relation to its chemical and physical properties; introduces the first and second laws of thermodynamics; applications of the laws of thermodynamics to equilibria between phases and in homogeneous systems; etc.

VERY HIGH-FREQUENCY TECHNIQUES

Compiled by the Staff of the Radio Research Laboratory, Harvard University. OSRD-NDRC. Two volumes (not sold separately). 1045 pages, $14.00

• Covers those techniques, at frequencies above about 100 mc, that are of general interest and value and which were developed during the course of the work at the Radio Research Laboratory. Gives a comprehensive treatment of antennas, direction finding systems, generation of continuous wave power, and reception of signals.

A guide to “an understanding of the science of animal life”

TEXTBOOK OF GENERAL ZOOLOGY

By WINTERTON C. CURTIS, Dean Emeritus and Professor Emeritus of Zoology; and MARY J. GUTHRIE, Chairman of the Department and Professor of Zoology; both at the University of Missouri.

The twenty-year history of a TEXTBOOK OF GENERAL ZOOLOGY is a proud one, marked by continued and increasing success. Now its excellent reputation is enhanced in the new fourth edition.

Like its predecessors, it is a well-organized, detailed study of the facts concerning the structure and functions of animals. The approach is through a study of vertebrate anatomy, morphology, and physiology, after which the more important biological principles are presented and the animal kingdom is reviewed.

In short, the new edition represents a careful bringing up to date and “polishing” of a successful book known to be teachable. A chapter has been added on “The Organ-Systems of Invertebrates.” There are minor omissions and additions, reflecting changes in present-day emphasis. Particular attention has been given to revising the already excellent illustrations. Old figures have been replaced or improved and many new figures have been added.

“Curtis and Guthrie” is particularly excellent for: (1) basic courses in Zoology; (2) courses in General Zoology that satisfy the following requirements... general culture, pre-medical, pre-dental, agricultural, veterinarian, and geological; (3) full-year courses in General Biology in which a textbook of General Botany is used in one semester and “Curtis and Guthrie” in the other.

Fourth Edition ready in September
6 by 9½
793 pages.
$4.50.

JOHN WILEY & SONS, Inc., 440-4th Ave., New York 16, N. Y.
TWO NEW BOOKS
FOR SEPTEMBER PUBLICATION

ZOOGY,
THE SCIENCE OF ANIMAL BIOLOGY

By
Professor A. M. Winchester, Head of the Department of Biology, Stetson University

This text provides the student with an introductory course in zoology that can be covered in one semester. Care has been taken to keep the vocabulary within the understanding of the student in order that confusion and loss of interest will not result from a maze of technical terms.

Contents: The Fundamental Unit of Life—The Cell; Vital Animal Life Processes; Protozoa—One-celled Animals; Protozoa (continued); Porifera—The Sponges; Coelenterata—Animals With Two Body Layers; Platyhelminthes—Free Living Forms; Platyhelminthes—Parasitic Flatworms; Nemathelminthes—Round Worms; Annelida—Segmented Worms; Echinodermata—Animals With Spiny Skin; Mollusca—Animals With Soft Bodies; Phyla of Lesser Significance; Arthropoda—Animals With Jointed Legs; Arthropoda—Arachnida and Myriapoda; Arthropoda—Class Insects; Arthropoda—A Social Insect, The Honey Bee; Insect Orders; Chordata; A Typical Chordate, The Frog; Aquatic Vertebrates; The Transition to Land, Amphibians and Reptiles; The Birds; The Mammals; The Physical Basis of Heredity; The Principles of Heredity; The Development of the Individual; Adaptation to Environment; Index.

428 pages 6 x 9 cloth illustrated Approximate Price $4.00

New Second Edition

GENERAL BACTERIOLOGY

By
The Late Professor D. B. Swingle and Assistant Professor W. G. Walter, both of Montana State College

Designed as a textbook for beginning courses in bacteriology, particularly for those students having had previous courses in botany, zoology and chemistry. It is highly satisfactory for meeting the prerequisites for advanced courses in the field.

Contents: What are Microorganisms?; The Rise of Bacteriology; The Microscope in Bacteriology; Morphology of Bacteria; Classification of Bacteria; The Use of Cultures; Reproduction and Growth of Bacteria; The Nutrition of Bacteria; Bacterial Products; Effects of Environment on Bacteria; Molds and Their Economic Significance; Yeast and Yeast-like Fungi; Bacteria of the Soil; Bacteria of Waters; Bacteria in Sewage Disposal; Microorganisms in the Air; Bacteria in Milk; Bacteria of Milk Products; The Preservation of Foods; Industrial Microbiology; The Mechanism of Infection; Immunity and Serum Reactions; Pathogenic Bacteria; Viruses, Bacteriophages, Rickettsias, and the Pleuropneumonia Group; Glossary; Index.

Approx. 315 pages 6 x 9 cloth illustrated Approx. Price $3.25

For Examination Copies Write To:

D. Van Nostrand Company, Inc.
250 FOURTH AVENUE
NEW YORK 3, N. Y.
HOLMES:
General Chemistry

This popular first-year college text presents all material in a way which is interesting to the student and at the same time shows him the practical importance of chemistry in modern life. Industrial applications of chemistry are given wherever possible, and many illustrations are used. The text is not confined rigidly to inorganic chemistry, but includes the basic principles and some of the interesting applications of organic chemistry. It is exceptionally well-arranged for teaching. Among its many features are: a full treatment of metals; a chapter on strategic raw materials; interesting material on petroleum refining, plastics, synthetic rubber and fibres, etc. Fourth Edition, $4.15

ADAMS & JOHNSON:
Elementary Laboratory Experiments in Organic Chemistry

This manual meets the requirements of either a full year or a semester course. Its arrangement is such that the individual instructor may choose the material he needs for his particular requirements. The most striking feature of the revision is the addition of sixteen tested experiments, with a number of longer preparations. The scope of the work is further extended by a list of suggestions for optional experiments. The new experiments have been so formulated as to use the cheapest reagents coincident with best results. Third Edition, $2.75

KOLTHOFF & SANDELL:
Textbook of Quantitative Inorganic Analysis

Used in both introductory and advanced courses, this text provides a thorough treatment of the fundamental principles upon which the subject rests; an outline of the most important classical procedures; a comprehensive discussion of the apparatus, reagents, and practical techniques employed in analysis; and a valuable key to the literature of analytical chemistry. Problems, with answers to most of them, are given at the end of each chapter. The importance of careful and accurate laboratory technique and the avoidance of experimental errors is stressed. Revised Edition, $5.00

NOYES & SWIFT:
A Course of Instruction in the Qualitative Chemical Analysis of Inorganic Substances

The tenth edition of this popular text contains a complete course of laboratory experiments, suitable for use either in the second half of the freshman course in chemistry or for more advanced courses in qualitative analysis, together with questions on these experiments and a full, well-tested system of analysis for the metallic elements and the more important acidic constituents. The discussions of theory and the procedures given in the system of analysis are consistent with present views. Tenth Edition, $3.55

An Introduction to the Study
of
ECLIPSING VARIABLES

By Zdenek Kopal

Staff Member, Massachusetts Institute of Technology, Consultant in Ballistics
to the United States Naval Proving Ground
Research Associate, Harvard College Observatory

"This is the only comprehensive treatment of the subject in any language. It will
undoubtedly prove to be a stimulus to further research in the field, which is in a
state of rapid flux. It should be in the library not only of every student of binary
stars but of everyone interested in the astronomical applications of mathematics."
—Dean B. McLaughlin, Science. Harvard Observatory Monograph, 6. $4.00

THE BIRD V-H KYMOGRAPH

Using our continuous feed principle, we offer a kymograph having the following features:

1. May be used for vertical or horizontal recording.
2. While designed for 10 inch paper, it will feed narrower widths.
3. Eight speeds are provided. Steps are in geometric progression, giving paper speeds from 2 to 450 cm/min.
4. The precision of paper movement is not affected by use or non use of the take-up roll.

A70-142 Bird V-H Kymograph
110-120 volt 60 cycle A.C.

DENTISTRY
AS A SCIENCE

In Fluorine and Dental Health (1942)

the AAAS took a great step toward making of dentistry a science by publishing in book form all that was then known about the relationship of fluorine to dental caries.

viii + 101 pp., 12 contributors, illustrated, documented, cloth bound

To AAAS Members . . . . . $2.50
To Nonmembers . . . . . $3.00

In Dental Caries and Fluorine (1946)

the AAAS completed its task by making available to dentists and public health officials the rapidly increasing and important knowledge of the possibilities of fluorides in water for mass prevention of dental caries, the most frequently occurring physical defect among the millions of men recently taken into our army and navy.

viii + 111 pp., 7½ x 10½, illustrated, documented, cloth bound

To AAAS Members . . . . . $3.00
To Nonmembers . . . . . $3.50

MANUAL OF ASTRONOMY
(3rd edition)
By R. William Shaw and Samuel L. Boothroyd
Cornell University

This Manual, hitherto published by the authors, is now available in a new, third edition. It may be used with any elementary college text in astronomy. Its 47 exercises are of three types: observational, laboratory, and interpretation, and are so planned as to lend themselves to rearrangement in order, as well as to adaptation for laboratory periods of varying length. Roughly, one-half require no special equipment for performance. Graphical and arithmetical solutions are emphasized, with occasional alternate solutions using trigonometry.

Questions with each exercise, star charts, large ecliptic charts, standard meteor observing charts, and graph paper are included—all bound together.

The previous use of this manual in its earlier editions, both at Cornell University and in other colleges and universities, has established its value for class use and also for individual use by amateur astronomers.

TEACHERS: Write us now for an examination copy, if you wish to consider this Manual for use by your classes.

304 pages, 8½" x 11", price $3.00

ASTRONOMERS
3" Achromatic Lens

Harry Ross Series of "Doublestar" Refractors, 3" aperture (75 mm), 40" focal length (1000 mm). An air spaced lens, strain free mounted in a smooth aluminum finished satin-black barrel. This lens is an exclusive Harry Ross product. It has a money back guarantee which states, "This lens will meet any and every test you may devise for it as an astronomical objective." It is 20 years since a lens of this quality has been available. Our production is limited. Order early. Postpaid $90.00.

Focusing Mechanism
For Standard 1½" Eyepiece
Full 2" of focusing motion. One revolution of knurled knob produces 1/8" motion on optical axis. Absolute centering guaranteed. No play. Will not bind or lock. No rack and pinion to strip. Precision turned ways allow smooth, easy positive focusing. Adapted to every type of telescope construction. Highest precision, perfect workmanship. Of brass and bronze throughout. Weight 1½ lbs. $22.50.

FOR REFLECTORS—Concave flanged bushing can be supplied to fit the size of your tube. Give telescope tube diameter when ordering. Bushing extra $10.00.

POSITIONS WANTED
The California Medical Bureau, Agency for scientific and lay personnel in medicine, biology, chemistry, physics, and allied sciences, supplies teachers, research workers, laboratory diaries, skilled office help. Prompt service. Registration free. Your patronage respectfully solicited. The CALIFORNIA MEDICAL BUREAU, Agency, Arcade Medical Center, 696 Colorado Street, Pasadena 1, California.

Statistician: BS in biological sciences plus graduate courses in statistics. Woman, available September 15 for biological assay or medical statistics work. Box 925, SCIENCE.

Psychologist: PhD, wants to teach social psychology, personality maladjustment, mental hygiene. On agreement other courses. Actually employed, but desires advancement. Box 104, Mitchell, South Dakota.

Pharmacist, Bacteriologist: Age 39, BS, MS, PhD. 10 years experience in developing research and control, of large pharmaceutical. Experienced in antibiotics, sulfa, acidlines and other synthetic drugs; chemistry and chemotherapy. Specialized in quaternary ammonium disinfectants and other synthetic dexters; medical and industrial applications. Numerous publications; medical teaching experience. Destines position in research director in pharmaceutical or chemical concern. Box 978, SCIENCE.

POSITIONS OPEN
Ten (10) Junior Mechanical and Electrical Engineers for Research and Development project located in Southwest. Bachelor degree required. Some graduate work and experience preferred. Write giving education, training and experience. Box 977, SCIENCE.

Pharmacist or Toxicologist, PhD or MD for rapidly growing pharmaceutical plant in metropolitan New York. Please give details in first letter. Replies held in strictest confidence. Box 965, SCIENCE.

Applications are invited for the following senior posts in the new Wattle Research Institute attached to the Natal University College, Pietermaritzburg, South Africa: (1) GENETICIST, (2) SILVICULTURIST, (3) CHEMIST, and (4) PLANT PATHOLOGIST.

(1) Geneticist: Candidates must be well-qualified and experienced in genetics. Field experience of plant breeding and selection, especially of forest trees, would be an advantage. The appointment will be in the grade of Senior Research Officer or Principal Research Officer according to qualifications and experience.

(2) Silviculturist: Candidates must be well-qualified and experienced in forestry, and practical experience of forest economics is desirable. The appointment will be in the grade of Senior Research Officer or Principal Research Officer according to qualifications and experience.

(3) Chemist: Candidates must be well-qualified in pure chemistry and have had advanced training or experience in plant biochemistry or soil science. Training in plant physiology and nutrition would be added qualifications. The appointment will be in the grade of Research Officer or Principal Research Officer according to qualifications and experience. The appointment will be in the grade of Research Officer or Senior Research Officer according to qualifications and experience.

The provisioninal salary scales for the above grades are as follows:

Research Officer $7,000--25,000
Senior Research Officer $10,500--12,500
Principal Research Officer $1,100--25--$1,200

No additional cost of living allowance is payable.

Membership in the University Teachers' Provident Fund is compulsory. The appointments will be in the first place for probationary periods of one year.

Applications for the above positions must be received by the 31st of December, 1947.

Shillaber's Immersion Oil for Microscopy—Non-drying—offers numerous advantages over cedar oil. Write for informative leaflet S47-Im; or send $1.00 for sample packet (2 x 1-oz.).

This operator knows that her work will pass inspection. With the aid of a Spencer Stereoscopic Shop Microscope she sees smaller details and controls her operation more accurately. The result is less scrap; lowered costs; increased profits.

Designed to meet critical wartime requirements, the Spencer Shop Microscope offers manufacturers new possibilities for quality control at every point—inspection of raw materials, toolmaking, tool inspection during operation, fine machining, and final inspection. Equipped with or without standard base, it is adaptable and can be permanently mounted to your equipment. Choice of optics offers magnifications from 9X to 54X.
