RAPID DETERMINATION OF "DDT"

References: Stiff & Castillo
Science, 101, 440(1945)
18, 316(1946)

REAGENTS:
XANTHYDROL 1559
10 g. $1.30
PYRIDINE 214
500 g. $3.00

METHOD:
Colorimetric for quantitative microdetermination.
Adaptable for field use to establish within 2 to 3 min.
presence of surface DDT on building materials and vegetation.

Swab impregnated with mineral oil is scrubbed over
n test surface, then inserted in hot anhydrous pyridine
solution containing xanthyrodrol and solid KOH.

Development of red color indicates presence of 2,2-
bis-(p-chlorophenyl)-1,1,1-
trichloroethane (DDT).
Minimum sensitivity of reaction: 10 gammas.

Xanthyrodol and pyridine are two of the 3,000 compounds you can order from this standard reference book. For a free copy write to Organic Chemical Sales Division.

*EASTMAN WILL BE GLAD TO SEND YOU WITHOUT COST AN ABSTRACT OF THE PROCEDURE.

THERE ARE SOME 3000 EASTMAN ORGANIC CHEMICALS
STAINLESS STEEL WEIGHTS
RESISTANT TO CORROSION
NON-MAGNETIC — STABLE

SET 100 GRAMS TO 1 MG.—CLASS S

These stainless steel weights are made of a non-magnetic alloy, specially selected, which is highly resistant both to abrasion and surface oxidation. Precision of adjustment over long periods of time is thus assured. These weights are not hygroscopic and therefore do not change weight with changes in humidity. They are highly resistant to corrosion and will withstand most laboratory chemicals. A highly polished surface eliminates the need for lacquer or other protective coatings. They are available in all standard sets as listed below, in either Class S or Class S-2 adjustments.

Class S sets are furnished in polished wooden boxes, velvet lined, with nylon tipped forceps. Fractional weights are protected by a glass cover. Two riders are included in each set.

Class S-2 sets are furnished in wooden boxes, velvet lined, with brass forceps. Two riders are included in each set. Glass covers on fractional weights are 75¢ extra. Nylon tipped forceps are $1.00 extra.

HOT ALCOHOL EXTRACTED

VITAMIN TEST CASEIN

for Biological Assays and Research

Fat and water soluble vitamins are removed by several thorough extractions with hot alcohol. This process, which requires five days of special treatment, provides a product of exceptional purity and uniformity making it ideally suited for use in a wide range of experimental diets. It has been the Vitamin Test Casein of choice of many laboratories for the past ten years.

For other GBI diet materials and supplements write for Booklet No. 677

Growth Regulators

A PRACTICAL HANDBOOK ON SYNTHETIC PLANT HORMONES
by JOHN W. MITCHELL and PAUL C. MARTH

A complete, authoritative summary of the progress made in the last twelve years in the field of growth regulators or synthetic plant hormones. Numerous charts, timetables, formulae and illustrations supplement instructions for the use of these chemicals to kill weeds, to make cuttings root readily, to increase fruit set, to facilitate the harvesting of apples and pears, and to improve the storage qualities of nursery stock. (Sponsored by the University of Chicago Committee on Publications in Biology and Medicine.)

At all bookstores, $2.50
THE UNIVERSITY OF CHICAGO PRESS
5750 Ellis Ave., Chicago 37, IIl.

THE NEW
LaMOTTE WATER SOLUBLE
pH INDICATORS
(Sulfon-phthalein) pH 0.2-9.6

These products were originally developed in the LaMotte laboratories and are of the same superior quality as the acid form indicators hitherto available for pH work. They have the distinct advantage of being instantly soluble in distilled water, hence are easy to convert to solution form. Use of alkali, as in the older technic is eliminated, and no heating is necessary. The clean, quick way to prepare indicator solutions for accurate pH work.

Price $2.00 per gram f.o.b. Towson, Md.
If you do not have the LaMotte A B C of pH Control, a complimentary copy will be sent upon request without obligation.

Four New NYSSCO BIOLOGY CHARTS

Size 36" x 50", cloth-backed

We announce the publication during the past summer of four new charts of the Nyssco Biology Series. These are as follows:

BE 35 Symbiosis. Illustrations in both the plant and animal kingdoms.
BE 210 Tulip. Features of a typical monocotyledonous plant.
BE 230 Apple. Features of a typical dicotyledonous plant.
BE 460 Grasshopper (Romalea). External and internal anatomy.

Unusual and painstaking care was exercised with regard to subject treatment, scientific accuracy, and artistic presentation. Beautifully lithographed in black and white.

These charts were planned with the cooperation of the Chart Committee of the New York Association of Biology Teachers.

Welcome additions for users of Nyssco Charts!
With eyelets, each—$3.75  With rods, each—$4.35
If not already in your files, ask for Cat. No. 7H.

**New! GEIGER MULLER LABORATORY SET**

**MODEL GRM-471**

A Combined Counting Rate Meter and Counter Set

A complete instrument for use with Geiger-Muller counter tubes in making laboratory measurements of radiation intensities. The model GRM-471 combines a complete counting rate meter of the laboratory type with recording circuit for operation of our external magnetic impulse register (recording clock). The instrument can, therefore, be used to give a speedy indication of radiation intensity by means of the integrating rate meter or may be used to record the actual number of ionization events taking place in the counter tube by means of the recorder circuit and recording clock.

**Check All of the Outstanding Features of this Instrument**

1—Complete Counting Rate Meter—provides quick indication of average counting rate.
2—Complete Counter Set for operation of recording clock.
3—Built in Loudspeaker for aural monitoring of operation.
4—Provision for Insertion of External Recording Milliammeter for permanent record of test.
5—Integrating Circuit of Four Ranges—5, 50, 500 & 5000 pulses per second full scale.
6—Provision for Connection to External Scaling Unit.
7—Regulated High Voltage Power Supply for Counter Tube—continuously variable up to 1500 volts: 1% regulation.
8—Oscilloscope Jack.
9—Extension Amplifier—External to set at end of plug-in cable for short leads from counter tube to first amplifier grid.
10—Three Pulse Equalizing and Sharpening Stages.
11—Accommodates Either Self-Quenching or Externally Quenched Counter Tubes.
12—Constructed in Completely Enclosed Steel Cabinet. 14” H × 21” W × 15” D, with access door on top.

**PRICE** (complete except for such accessories as counter tubes, recording clock and recording milliammeter)

RUDIMENTS of CHEMISTRY
BY ROLAND M. WHITTAKER
Associate Professor of Chemistry, Queens College

This unusual text is essentially planned and written for two types of college students. First, for those who propose to take only a short course in chemistry; second, for those students who want to acquaint themselves with the part chemistry plays in modern civilization, even though their basic interest lies in altogether different fields of study.

It presents in a clear and interesting manner the most recent concepts of the structure, properties, and general behavior of matter. The treatment assumes no previous knowledge of chemistry but is so thorough that many of the chapters can serve as starting points for advanced courses. Every effort has been made to present the material in a manner which is systematic and rigorously scientific. Precision in the use of scientific words and definitions is employed consistently throughout the book.

Rooms will be assigned and confirmed in order of receipt of reservation.
Dear Fellow Scientists:

Since accepting the chairmanship of the Registration Committee for the December 26–31 meeting of the American Association for the Advancement of Science, I have come to realize how important registering for the meeting will be. I am sure those of you who plan to attend the meeting will agree with me, particularly to advance registration, when you consider the following conditions.

(1) At times 50 to 60 scientific sessions will be held simultaneously by the 15 sections of the Association and the more than 50 cooperating societies. Therefore, sessions must be held in every important hotel in and near the Loop Area of Chicago. Your problem relative to the sessions will be—where, when, how to get there. The General Program, issued only to registrants, gives all the answers, and a Map. It will be indispensable, not only as a guide to the many sessions, but also, if you register in advance, it will enable you to plan unhurriedly the best use of your time during the meeting.

(2) Even if you have the program in your own specialty, you will want to attend important sessions in related fields. Widening horizons are now characteristic of science as never before, and the Association meetings provide unparalleled opportunities for becoming acquainted with specialists in many fields. The General Program will give you the where, when, and how to get there, with a great saving in time and taxi fares.

(3) You will want to find your friends during the meeting and you will want them to find you. That will be no needle-in-the-haystack problem if you are registered and have the General Program. The names of those registered in advance of the meeting will be on the Visible Directory, open for inspection adjacent to the International Science Exhibition in the Stevens Hotel. The Visible Directory is also an invisible directory, meaning that you can obtain the address, by telephone, of any person registered in advance for the meeting. All you will have to do is telephone the attendant in charge of the Visible Directory at the Stevens Hotel.

(4) In addition to listing the titles of papers and authors, the General Program will contain an index of the names and institutions of all persons on every program of the meeting. That is obviously something to keep. Every person registering will have a copy of it. There are other good reasons why you should register, but I will use the remaining space to ask you to fill in promptly, carefully and fully the registration blank below and send it now to the A.A.A.S. Office in Washington with your check for the registration fee (see blank). You will then receive your copy of the General Program early in December.

Cordially yours,
HANS O. HOEFFNER
University of Chicago

Demonstrations that ALL Can See

More clearly than if they were right beside you, your pupils can see and understand without moving from their seats—when you perform a demonstration from your desk with a Spencer Model B Delineascope.

From a convenient horizontal projection platform, it throws a clear cut image onto an overhead screen. Science experiments, drawings, contours of specimens, lantern slides—all are projected in vivid detail.
