Science Writing Awards

In this postwar world, science has a major role. Some look to science to alleviate or eliminate disease... some expect it to ensure and guarantee a permanent peace... still others expect the developments of science to unfold a new era of sustained economic prosperity. The broad attainment of these goals demands a well informed public. Science must be intelligently, accurately and meaningfully explained to the layman so that he may understand its possible contributions and also its limitations in reference to problems of human welfare.

The Westinghouse Educational Foundation and the American Association for the Advancement of Science feel that special encouragement should be given to the writers who accept the responsibility of interpreting scientific research and progress to the public. Believing firmly in the worth-whileness of this objective, the Foundation and the Association have joined together for the sponsoring and administering of the AAAS–George Westinghouse Science Writing Awards. The fourth series of Awards and the 1948 competition period are now being announced.

Two $1,000 prizes will be given—one for newspaper and one for magazine science writing. Citations for distinguished journalism will be awarded to the publications sponsoring the winning articles. The competition period is from October 16, 1947 to July 31, 1948 for newspaper stories and from October 1947 through July 1948 for magazine articles. All entries must reach the Managing Committee on or before August 7, 1948. The articles must have been published in either a newspaper or magazine of general circulation within the continental limits of the United States. The awarding of the prizes will take place during the Centennial Celebration of the Association in Washington, September 13–17, 1948.

Illustrated is the Taylor Model T-O pH Comparator—basic set of the Taylor line. All pH slides and many others may be used on this base. In making a determination, the prepared sample is placed in the middle tube in the base, the slide moved across until the colors match, and . . .

**There's the Value!**

**FAST • EASY**

**pH and CHLORINE DETERMINATIONS**

**with**

**TAYLOR COMPARATORS**

The all-important determination of pH in manufacturing and processing chemicals is merely a matter of 60 seconds with the Taylor Comparator. Because of their accuracy, simplicity of operation, durability, and low cost, Taylor Comparators are recognized throughout industry as a dependable standard for colorimetric determinations. All Taylor Liquid Color Standards carry an unlimited guarantee against fading. Nine Taylor Color Standards, a complete set for each indicator or determination, are enclosed in one plastic slide—no handling of single standards. Many Color Standard Slides may be used with one base—each set is completely portable.

**VALUABLE BOOK FREE**

Textbook of Geology, Part I

PHYSICAL GEOLOGY
Third Edition

by CHESTER R. LONGWELL, Henry Barnard Davis Professor of Geology; ADOLPH KNOFF, Sterling Professor of Physical Geology; and RICHARD F. FLINT, Professor of Geology. All at Yale University.

The new Third Edition has a completely new chapter, "The Method and Scope of Geologic Study," covering the scientific method, the continents, movements of the crust, the contest between internal and external forces, and the time-factor in geology. About 25 new illustrations have been added to the already excellent selection included in earlier editions. Each of the many reading references is described briefly, to allow a more exact choice of extra study. Text matter is concise; all material considered unnecessary for an introduction to geology is excluded from this edition.

Ready in August
Approximately 600 pages
Probable price, $5.00

Introduction to

GENETICS AND CYTOGENETICS

by HERBERT P. RILEY, Professor and Head of the Department of Botany, University of Kentucky.

This book features the chromosomal approach to the study of genetics. Beginning with a discussion of cells, the book goes on to discuss chromosomes and genes. Mendelian inheritance is considered as a function of chromosome behavior. All material in the text is presented logically rather than chronologically. An extensive discussion of blood groups is included, as well as some elementary biology, specifically for review purposes. Numerous figures, many of them never published in any other book, illustrate almost every page of text. A large bibliography is given for every chapter.

596 pages
$5.00

DETOXICATION MECHANISMS

by R. T. WILLIAMS, Senior Lecturer in Biochemistry, University of Liverpool, England.

Detoxication Mechanisms gathers together in logical order the available information on the metabolic fate of organic compounds foreign to the body. The book aims to make it possible for the worker to advance suitable working hypotheses. It covers the metabolism of; aliphatic compounds; cyclohexane derivatives; aromatic hydrocarbons; halogenated aromatic hydrocarbons; phenols; aromatic alcohols, ethers, aldehydes, ketones, amides; aromatic acids; organic cyanides; aromatic nitro, amino and azo compounds; sulphones, sulphonlic acids, sulphonamides; terpenes, camphors; heterocyclic compounds; organic compounds of arsenic.

$5.50

Dissociation Energies and Spectra of

DIATOMIC MOLECULES

by A. G. GAYDON, Warren Research Fellow of the Royal Society, D.Sc. (Lond.).

Dr. Gaydon clears up some of the inconsistencies and unsolved problems in the determination of dissociation energies. The approach is mainly from the spectroscopic viewpoint, but two chapters cover determinations by thermal methods and by controlled electron impact. This is one of the very few books, if not the only one, to give a rounded account of this theory. It includes the author's own contributions to the subject, and a summary of numerical data. The last chapter is a collection of data for about 250 diatomic molecules, many of which are carried to a higher degree of accuracy than ever before, and which have never been published previously.

You get UNIFORM, ACCURATE results with the

Castle

PRECISION INCUBATOR

Precise performance is essential in any incubator used in bacteriological work . . . and precise performance is the outstanding feature of all Castle Precision Incubators.

Independent laboratory tests proved these two important facts:

UNIFORMITY, ± 3/4°C. Never as much as a degree variation between top and bottom of chamber when loaded.

CONSTANT TEMPERATURE, ± 1/2° to 1/4°C. Never more than a fraction of a degree variation at the thermometer . . . despite room temperature fluctuations.

For full details, see your Castle dealer or write: Wilmot Castle Company, 1212 University Ave., Rochester 7, N. Y.
FUNDAMENTALS OF HUMAN REPRODUCTION

Dr. Potter describes, clearly and authoritatively, the most important aspects of human reproduction and prenatal development. The illustrations are a unique feature of the book. There are over 100 line illustrations, all reproduced from original drawings prepared especially for this book by Alvin Meyer, F.A.A.R. In addition, there are 13 photographic plates of exceptional quality and interest.

VIBRATION AND SOUND. New second edition

By Philip M. Morse, Director, Brookhaven National Laboratory. International Series in Pure and Applied Physics. 466 pages, $5.50

The revision of this outstanding text represents a thorough, up-to-date treatment of the theory of vibration and sound for students of physics and communications engineering. The major changes and additions in the new edition are concerned with wartime developments in the field. A feature is the application of operational calculus and the Laplace transform methods to the study of acoustical transients.

GENERAL AND APPLIED CHEMISTRY. A Brief College Course

In this forthcoming text the authors present a brief treatment of the subject which constitutes a distinct departure from the current textbooks in general economics. Designed primarily for students in agriculture, engineering, home economics, and other applied sciences, and the liberal arts, it provides in concise form the more commonly recognized material on the nonmetals and the metals.

RURAL HEALTH AND MEDICAL CARE

By Frederick D. Mott, M.D., and Milton I. Roemer, M.D. Ready in April

An unusually comprehensive analysis of a subject that has been of growing concern to the nation for many years. In bringing together for the first time a wealth of material on rural health problems, the book describes the economic and historical developments from which arise present difficulties in rural medical services, and then discusses these difficulties and offers recommendations for future action.

COLEMAN & BELL
Spring book issues

The spring book issues of SCIENCE (April 30) and THE SCIENTIFIC MONTHLY (published late April) will be filled with interesting and useful material about scientific and technical books.

SCIENCE will present two historical articles. One will cover the significant scientific and technical books during the AAAS century, 1848–1948. The second article will present the growth and development of scientific journals during the same period. A third feature will be an informational listing of overseas publishers of scientific books.

THE SCIENTIFIC MONTHLY book issue will feature the organization and management of scientific information. Articles are being prepared by leading scientists and staff members of libraries specializing in scientific publications. Two contributions are planned from the Library of Congress's staff.

Both journals will have greatly enlarged book review sections covering recently issued books from domestic and overseas publishers.

Be sure to see both book issues. There will be no duplication of articles or books reviewed.

SCIENCE—April 30—25¢ the copy
THE SCIENTIFIC MONTHLY—May
(published late April)—75¢ the copy

CHARGES FOR CLASSIFIED ADVERTISING
Regular setting 10¢ a word. Minimum charge $2.50 for each insertion. A box number counts as 8 words of the advertisement (e.g., 25 words plus box number equals 33 words). Make checks payable to the AAAS. All insertions must be accompanied by correct remittance and sent 10 days in advance of publication date to the Advertising Department, AAAS, 1515 Massachusetts Avenue, N. W., Washington 5, D. C.

POSITIONS WANTED

The California Medical Bureau, Agency for scientific and lay personnel in medicine, biology, chemistry, physics and allied sciences, supplies teachers, research workers, laboratory dieters, skilled office help. Prompt service. Registration free. Your patronage respectfully solicited. THE CALIFORNIA MEDICAL BUREAU, Agency, 2620 Second Medical Building, 696 Colorado Street, Pasadena 1, California.

Biochemist: M.S. in June; age 23; college mathematics and chemistry teaching experience; virus and antibiotics research experience; pharmacology publication; excellent references; protein and microbiological chemistry specialty. Box 240A, SCIENCE.

Organic chemist, Ph.D., M.I.T., 1940, Married, age 33. Administrative and research experience. Desires position as research or development chemist. Available immediately. Box 242A, SCIENCE.

Parasitologist: two years, entomologist in the West Indies; seven years on faculty of medical school, including three as head of department of parasitology; for further information, please write Burnese Larson, Director, Medical Bureau, Palmolive Building, Chicago 11.

Pathologist: M.D., Diplomate in Pathology, thorough background in internal medicine and pathology to cancer research laboratory for many years. Desires position in oncology department or where department of oncology is being established. Numerous publications. Box 236A, SCIENCE.

Physicist: Ph.D. Assistant Professor large university; ten years varied experience teaching, academic and industrial research, physics, electronics, meteorology; seeks industrial or academic position. Box 237A, SCIENCE.

POSITIONS OPEN

Positions Open: (a) Professor and head of department of physiology, university medical school having important expansion program should be interested in developing department. (b) Physician willing to relinquish clinical medicine to become associated with pharmaceutical company; duties include approving clinical standpoint all literature, both promotional and informative; preferably one capable of taking complete charge of all publications; research or teaching experience desirable; East. (c) Biochemist; preferably one whose background and qualifications are in protein and cellular biochemistry; cancer department, university hospital. (d) Pharmacologist to head department university medical school; Ph.D. or M.D.; $6,000-$7,000. (e) Organic chemist; Ph.D., for cancer research project, department of surgery, university medical school; would work independently; Middle West. (f) Physician experienced in virus research; research position guaranteed for five years or more; university medical school; West. (g) Organic chemist; Ph.D. to do research in synthetic organic chemistry, large pharmaceutical company; East. (h) Medical Bureau (Burnese Larson, Director), Palmolive Building, Chicago 11.

AMERICAN COLLEGE BUREAU

Light Metals in Structural Engineering

By L. DUDLEY

Here is long-needed information for engineers who find difficulty in applying basic engineering principles to problems involving the use of light alloys, because of the lack of published data on the characteristics and possibilities of these materials, and for those who have had no formal contact with the subjects known as strength of materials and the theory of structures. This book is intended primarily to assist those engaged in these two spheres, and includes much information required for the examinations in the strength of materials, set by the various professional engineering institutions. Cambridge University Press. $6.50

A Textbook of Heat

By G. R. NOAKES

This book provides a logical course in Heat. Great care has been taken that principles are properly grasped and that simple experiments can be carried out with limited apparatus. The common pitfalls are pointed out and carefully explained, and the author is precise on such matters as Newton’s Law of Cooling, and Kirchhoff’s Law. Also, stress has been laid on the importance of considering the accuracy of experimental work. To a large extent the book is an accumulation of ideas and methods that have been found good and assimilated during years of teaching. A list of problems follows each chapter. Cambridge University Press. $3.00

General Chemistry

By HARRY N. HOLMES

One of the most popular first-year college texts, this book is noted for its wealth of descriptive material. All the material is presented in a way which is interesting to the student and at the same time shows him the practical importance of chemistry in modern life. Industrial applications are given wherever possible, and many illustrations are used. The basic principles and some of the interesting applications of organic chemistry are also included. Fourth Edition. $4.15

LABORATORY MANUAL is also available. Fourth Edition. $2.25

THE MACMILLAN COMPANY • 60 Fifth Avenue • New York 11
THE 64 SCALER

FEATURES OF THE NEW "64" SCALER

- DUOSCALE REPLACEABLE SCALING UNITS. The only commercial scaler using the Duoscale, a plug-in scale of two unit for simplifying service and repair problems.
- SCALING CIRCUIT. A scale of sixty-four embodying an improved version of the well known Higginbotham circuit.
- REGISTER. Equipped with a built-in panel mounted Wizard mechanical register with zero reset provisions.
- HIGH VOLTAGE POWER SUPPLY. Built-in high voltage supply is continuously variable from 600 to 1800 volts, with a Weston H-V meter mounted on front panel.

Available from stock at a price of $395.00, less G-M tube, F.O.B. Boston (export and Canadian price add 10%).

At the heart of Spencer
METALLURGICAL MICROSCOPES

-A HIGHLY EFFICIENT VERTICAL ILLUMINATOR

An illuminator that is simple to operate, that is sturdy enough to take hard usage... that provides increased brilliance and contrast—minus glare... that is always cool enough to handle.

Pioneered by American Optical Company, the Spencer Vertical Illuminator has a first surface mirror, and coated plano-glass reflector, conveniently interchangeable. Additional features are field and aperture diaphragms, built-in light intensity control, and interchangeable filters.

Spencer Metallurgical Microscopes offer many other outstanding advantages:

* Quick-change nosepiece facilitates interchange of objectives
* Coated optics eliminate reflections and provide added contrast
* Wide range stage adjusts to unusually large or small specimens
* Large research-type stand has interchangeable body tubes
* Fine adjustment is precise, enduring micrometer screw type
* Polarizing filter and cap analyzer (accessories; enable the use of polarized light)
* Grooved bearing surfaces assure long wear
* Eleven standard combinations offer choice of stages, optics, illuminators, and body tubes

For further information write Dept. C3.
