The Improved Fisher Titrimeter (Reg. U. S. Pat. Off.) enables greater accuracy of results, saves time and opens new fields of application. It has three times the sensitivity of the original model and there are now only three controls.

End points detected by the electrometric method—indicated by the unmistakable movement of the magic eye—are much more accurate than those detected by visual means.

The Improved Fisher Titrimeter, with directions, for 110 volts, A.C. $310.00

* Sensitivity Greatly Increased
* Manipulations Simplified
* Range Increased

Both research men and technical personnel are quick to appreciate the advantages offered by this quality equipment — scalers, high-voltage supply, portable meters, dosimeters, counters, and other instruments for routine or research counting.

PROVEN DESIGN

All circuits are carefully proved in exhaustive tests to assure complete satisfaction. Designers of this equipment are experienced in laboratory problems of nuclear research, and have planned each instrument to provide the necessary functions for its intended use.

DEPENDABLE OPERATION

All instruments are thoroughly tested before shipment to eliminate danger of service failure. You can rely on their long, trouble-free operation.

FREE CHART OF NUCLEAR RESEARCH

The Segre Chart of Nuclear Properties is available without charge, exclusively from Instrument Development Laboratories. Write for it, or ask for detailed information about any type of nuclear research instrument.

SHOEMAKER
Small-Fruit Culture
2nd Edition

By James Sheldon Shoemaker, Ph.D., Professor of Horticulture, Head of the Department of Horticulture, Ontario Agricultural College.

NEW! This text is adapted to a full course on small-fruits. It can be used by beginning students in colleges, universities, vocational agricultural schools and secondary schools giving agricultural courses.

It gives a complete, up-to-date discussion of the culture of grapes, strawberries, bramble fruits, currants, gooseberries, blueberries, cranberries, etc., and includes the most recent data on new varieties. New insecticides, DDT, are fully integrated. Greater emphasis is placed on the mulching of bramble fruits, currants, gooseberries and cultivated blueberries. The latest findings on the frozen-pack preservation of berries are offered, and such factors as hardiness and the causes of the winterkilling of raspberries are fully explained.

New material is presented on the youngberry, boysenberry, vinifera and muscadine grapes, various types of blueberries, improved culture methods, new practices for irrigated sections and further descriptions of leading districts.

64 Illustrations. 433 Pages. (1948) $4.00

Laurie and Kiplinger
Commercial Flower Forcing
5th Edition

By Alex Laurie, M.A., Professor of Floriculture, and D. C. Kiplinger, M.S., Assistant Professor of Floriculture, Ohio State University.

NEW! This new, well-illustrated edition brings up to date various fundamentals involved in growing flower crops for commercial purposes. The methods presented follow the practice of better growers, supplemented by important experimental work done under the supervision of the authors. The section on gravel culture has been brought to the point where the student and grower can utilize the latest information with assured satisfactory results. Newer methods of pest control and many other subjects are included. The text is planned for use in courses on greenhouse management in agricultural colleges, vocational schools and for practical guidance in the commercial greenhouse.

Illustrated. In Preparation. (1948) Probable Price $5.00

ADENOSINE TRIPHOSPHATE

This vital biochemical required for the study of energy transfer, muscle contraction, growth and many enzymic and metabolic reactions, is now being produced in ample supply by Schwarz Laboratories, Inc.

Research workers can now extend investigations on the action of ATP in the treatment of arthritis, hypertension, and cardiovascular malfunction reported by European clinicians.

Schwarz ATP, prepared by fermentation methods, is free from alkaline earth salts, and ready for immediate use by simple solution and pH adjustment.

Assayed by the phosphate hydrolysis method, the compound contains a minimum of 70% free adenosine-5-triphosphoric acid. Each package contains a statement of chemical analysis, giving the total nitrogen, total phosphorus, and hydrolyzable phosphorus.

A Schwarz high-quality product of dependable assay, made by the largest manufacturers of nucleates and related yeast derivatives. Write for complete information and prices.

and now...a genuine Leitz

MICROSCOPE

for the most exacting scientific requirements

Leitz Microscopes need no introduction! The Model illustrated is supplied with Inclined Binocular body tube with parallel vision, as well as Interchangeable Monocular body tube for photomicrography.

It has a Quadruple nose piece.
The Coarse Focusing Adjustment is by rack and pinion motion; Fine Adjustment on double ball bearings with micrometer head, divided drum and vernier which records the lateral displacement of the Microscope tube within 0.001mm.

A built-in Mechanical Stage is provided to cover the entire area of the Microscope slide.

It has a substage with rack and pinion, a Divisible, two-lens Abbe condenser with Iris Diaphragm.

The Optical Outfit meets the standard requirements of the medical profession, consisting of three Achromatic Objectives, including the oil immersion 1/12, as well as one each pair of Huygens Eyepieces 6X and 10X.

It is made by LEITZ, makers of Leica Cameras and other world famous instruments of scientific precision and inimitable craftsmanship.

The present supply is limited but we can still make immediate delivery.

ONLY BERKELEY COMBINES ALL THESE ADVANCED FEATURES

Unmatched Portability—11 lbs. total weight achieved through engineered design.

Scale of 1000—using three compact true decimal plug-in units.

Automatic Operation—Flexible plug-in accessories for automatic scaling and timing.

High Voltage Power Supply—electronically regulated—variable from 200–2100 V.

High Resolution—greater than that of any Geiger Muller Tube.

DIRECT READING INDICATION OF ALL COUNTS

The new Berkeley Geiger Muller Decimal Scaler—Model 1000, indicates all counts directly—eliminating all errors and fatigue resulting from interpolation. (9897 counts are indicated in the illustration.)

Electronic Scaling of 1000 and 100 can be selected and the built-in register will record up to 10,000,000 counts without repeating.

The Berkeley Decimal Scaler is offered at an attractive price.

This important instrument provides many advancements to radiation measurement. Send for Bulletin BDS-200 containing complete description and full specifications.

Only B&L Microscopes give you ALL these performance advantages:

- Substage with full 360° ring mount
- Exclusive variable focus condenser
- Exclusive threadless cell lens mounts
- Exclusive nosepiece with roller bearing stops
- Exclusive bronze body tube dove-tail slide
- Coarse adjustment with matched rack and pinion
- Exclusive patented lever fine adjustment
- Exclusive patented ball-bearing fine adjustment
- Parallel eye tubes
- Truly beautiful styling

In changing magnification you can be sure the objective will center exactly without adjustment, when you turn the nosepiece of a Bausch & Lomb Laboratory Microscope. A roller bearing in the stop clip gives you this important feature, and because it minimizes wear, you have this accuracy for the full life of the microscope.

Accurate centration and parfocality of objectives result, too, from high precision methods. The nosepiece has a tapered bearing, diamond turned and faced on a specially designed B&L lathe. Center hole fit tolerance is ± .0001". Fit tolerance of shells is ± .000125".

These advantages are yours with a new Bausch & Lomb Laboratory Microscope. Bausch & Lomb Optical Company, 642-P St. Paul St., Rochester 2, N.Y.

**Association Affairs**

**Southwestern Division, AAAS**

The executive secretary-treasurer, Frank E. E. Germann, reports in a recent letter to members of the Division that the date for the Las Vegas meeting has been set for May 3–6, the meeting of the Executive Committee being held on Sunday evening, May 2. Abstracts of papers to be presented at this meeting should be in the hands of section secretaries not later than April 5. All correspondence regarding the meeting should be addressed to R. A. Studhalter, Texas Technological College, Lubbock, Texas, secretary for the 1948 meeting.

In addition to Dr. Germann, officers of the Division are F. H. Douglas, Denver Art Museum, president, and Ernst Antevs, Globe, Arizona, vice-president. Elected members of the Executive Committee include E. W. Haury (1948), University of Arizona; H. O. Smith (1948), New Mexico State College; W. M. Craig (1949), Texas Technological College; H. P. Mera (1950), Santa Fe, New Mexico; and Edna L. Johnson (1950), University of Colorado. Section chairmen and secretaries are, respectively: Biological Sciences—Edna L. Johnson, University of Colorado, and Fred Emerson, New Mexico Highlands University, Las Vegas; Mathematical Sciences—Emmett Hazlewood, Texas Technological College, and H. D. Larsen, University of New Mexico, Albuquerque; Physical Sciences—O. R. Munroe, New Mexico Highlands University, and A. R. Ronzio, Los Alamos; Social Sciences—F. H. Douglas, Denver Art Museum, and W. W. Postlethwaite, Colorado College, Colorado Springs.
