INTRODUCTION TO ORGANIC CHEMISTRY
Third Edition
by IRA D. GABARD, Professor of Chemistry, New Jersey College for Women.

An introduction to both theoretical and experimental organic chemistry, this standard textbook is now thoroughly revised and brought up to date. Changes in the new edition include: expansion of the section on azeotropy; new sections covering sulphur derivatives and nitroaromatics; a discussion of fumaric, maleic and adipic acids; a brief treatment of polarized light; and the inclusion of the recent advances in the petroleum and rubber industries.

February 1948
396 pages
$3.50

QUANTITATIVE ANALYSIS
Third Edition
by W. C. PIERCE, Professor and Chairman of the Department of Chemistry, Pomona College; and
EDWARD L. HAENISCH, Professor and Head of the Department of Chemistry, Villanova College.

Almost completely rewritten, the new edition includes the following changes: expansion of questions and problems by about 50%; almost complete replacement of the present questions and problems; shift of emphasis to procedures which utilize commercially available materials; new procedures introduced to include the use of an organic precipitant; change in the sign conventions, bringing them into accord with conventions used in the most widely-used physical chemistry textbooks; and introduction of a chapter on the methods of treating ionic equilibria.

Ready in May 1948
Approximately 521 pages
Probable price, $4.00

ANIMAL BREEDING
Fourth Edition
by LAURENCE M. WINTERS, Professor of Animal Husbandry, in charge of Research in Animal Breeding, University of Minnesota.

Presents the subject from the biological viewpoint, tracing the developmental history of various breeds, and discussing the principles of heredity and the physiology of the reproductive organs. Revisions in this edition are many. Community breeding has been incorporated into other sections. Material on inbreeding, crossbreeding and artificial insemination has been greatly expanded. The discussion of selection has been increased to two chapters, covering selection and the effectiveness of selection. The final chapter has been completely rewritten; it now discusses building superior germ plasm, giving full attention to the progress made in recent years.

April 1948
Approximately 402 pages
Probable price, $5.00

BATTLEFRONTS OF INDUSTRY
by DAVID O. WOODBURY, Westinghouse Electric Company.

This is the dramatic story of Westinghouse at war, a story in many points typical of American industry as a whole. Very little has so far been told specifically about industry's part in winning the war; now, here is the book which gives that history—instructively and readably. It tells of the ingenuity of engineers and scientists in meeting and overcoming great problems, of the application of mass production techniques to war machines, and of the speedy completion of assigned work which had been considered impossible to do at all in peacetime.

Ready in May 1948
Approximately 329 pages
Probable price, $3.50

JOHN WILEY & SONS, Inc., 440 Fourth Ave., New York 16, N. Y.
Minimizes Handling
Saves Valuable Time
Reduces Breakage

PIPETTE WASHER

Stainless steel Pipette Holder with heavy wire mesh bottom fits standard 6 x 18 inch Pyrex Brand Jars.

By eliminating unnecessary handling, this new compact AUTOMATIC PIPETTE WASHER saves valuable time, frees laboratory technicians for other tasks, and keeps pipette breakage at a minimum.

The PIPETTE WASHER washes pipettes up to 15" long by alternate water filling and draining cycles of approximately one minute. A few cycles are usually sufficient to do the job after pipettes have been conditioned in chromic acid solution.

Washer, available in Monel metal or stainless steel is 22½" high, with a 6" cylinder diameter and a base diameter of 10".

A71-722 AUTOMATIC PIPETTE WASHER without Pyrex Brand Jar ................. $60.00
A71-724 Pyrex Brand Jar 6 x 18" ............... 4.75

GENERAL CHEMISTRY

By Linus Pauling, Professor of Chemistry, California Institute of Technology, currently Eastman Professor at Oxford University, England

GENERAL CHEMISTRY discusses the properties of substance in terms of atoms and molecules. This book, which is an introduction to the science as a whole, presents chemical theory correlated with descriptive chemistry, in a straightforward, logical way.

The illustrations, strikingly appropriate, are by Roger Hayward. One of many favorable comments on Pauling’s GENERAL CHEMISTRY says: “It is really a challenging book and the illustrations are easily the most outstanding in any existing book on general chemistry. Furthermore, it is a scientific book and not just a book about science.”

Pp. 595—Illustrations 117
Price text edition $4.25
trade edition $5.00

A Companion-piece to Pauling’s GENERAL CHEMISTRY

A LABORATORY STUDY OF CHEMICAL PRINCIPLES

By Harper W. Frantz, Professor of Chemistry, Pasadena City College

The primary purpose of this book is to teach the fundamental principles of chemistry rather than descriptive facts alone. The manual may be described as semi-macro in general character. Experimental procedure is prefaced, in each case, by brief explanations and discussions that review and stress the principles that are more fully presented in the student’s general chemistry text. A course of qualitative analysis is integrated with general chemistry, accounting for about thirty per cent of the work. This manual has been used in trial form since 1939—and can be used successfully in conjunction with a number of general chemistry texts. Roger Hayward’s illustrations graphically portray each important step in experimental procedure. The text is printed in easy-to-read two column measure—with ample provision for entering data and for correcting. The manual “handles” conveniently.

Pp. 288—Illustrations 80—Probable price $2.50
Ready for fall classes

INTRODUCTORY QUANTITATIVE ANALYSIS

By Axel R. Olson, Professor of Chemistry, Edwin F. Orielmann, Assistant Professor of Chemistry, Charles W. Koch, Instructor in Chemistry, University of California

Designed for students who require understanding of the basic science and of the technique of analysis, this is a book that helps to develop the student’s scientific judgment, as he learns the technique. Here theory, laboratory and calculations are well coordinated. Calibrations are kept to the minimum, discussion on balance is limited to details in weighing, the theory of errors is given only to the degree necessary for the student’s evaluation of analytical data. Detailed laboratory procedure for a one-semester introductory course and elementary but sound development of theory.

Available for fall classes—Illustrated by Leonard Tregillus
Approx. 300 pages—Probable price $3.50

W. H. Freeman and Co. 549 Market St. San Francisco 5, Calif.
## Important Harper Texts in Biological Science

**ANIMAL BIOLOGY, Fourth Edition**, by Michael Frederic Guyer  
$4.50  
This is an extensive revision, completely reset, of one of the most successful textbooks for the elementary college course in zoology. It will be available in late April, in ample time for consideration for fall classes. More than 450 colleges and universities have used the earlier editions.

**LABORATORY OUTLINES FOR ANIMAL BIOLOGY**, by Guyer and Hellbaum  
$2.50  

**GENERAL BIOLOGY, Revised Edition**, by Kenoyer and Goddard  
$4.50  
The recent revision of this standard text for general biology has nearly doubled the use of the volume in college courses. Features of the work are its careful balance, its medium course between types and principles approaches, its consistent concern with human applications, and its lavish illustrations.

**LABORATORY MANUAL FOR GENERAL BIOLOGY**  
$2.00  

**THE HUMAN ORGANISM AND THE WORLD OF LIFE**:  
*A Survey in Biological Science*, by Young, Stebbins, and Hylander  
$4.00  
A widely used textbook for the orientation course in the biological sciences, providing a well-integrated and unified presentation of significant matters from zoology, botany, human behavior, and personality.

**THE ESSENTIALS OF PLANT BIOLOGY**, by Frank D. Kern  
$4.00  
This new and outstanding textbook for the one-semester course in botany provides a functional approach to the essential facts and principles necessary for understanding the life, development, relations, and uses of plants. Attention is centered on activities and on an interpretation of life phenomena, and the importance of plants in our daily life is stressed.

**TEXTBOOK OF BOTANY**, by Transeau, Sampson, and Tiffany  
$4.50  
One of the leading textbooks for the full year course in botany, noted for its emphasis upon environmental and physiological conditions. The lavish and beautiful illustrations are a feature of the text. Two quite different laboratory manuals are available to accompany the text.

**WORKBOOK IN GENERAL BOTANY**, by H. C. Sampson  
$2.25  

**THE STUDY OF PLANTS**, by L. H. Tiffany  
$1.50  

**FOUNDATIONS OF PLANT GEOGRAPHY**, by Stanley A. Cain  
$5.00  
A distinguished and scholarly volume for advanced students and workers in the field of geographic botany, ecology, genetics, and related fields. Its illustrative material is drawn from the whole world.

"Jagabi" Rheostats insure precise current control over a long service life by combining ruggedness of construction with instrument accuracy. Small to large, each rheostat permits the nicety of adjustment necessary for precision control of associated equipment. Positive action and smooth operation are attained through the "Lubri-tact" feature—a unique permanently lubricated sliding contact. A full range of "Jagabi" Rheostats in 4 sizes, with 76 different ratings, and a variety of type are carried in stock. Write for Bulletin 1745-SM.

Electrical & Scientific Instruments
1316 ARCH STREET • PHILADELPHIA 7, PENNA.

NOW AVAILABLE
in pure form and in small quantities for research workers

METHYL OLEATE
Wijs iodine value, 85.8 (theoretical 85.6). Prepared by repeated fractional crystallization from the methyl esters of olive oil fatty acids. Purity calculated from analysis by method of alkali conjugation, 99.8%.

METHYL LINOLEATE
Prepared from highly purified tetrabromostearic acid (melting point 115.5°C) by debromination and fractional distillation. Wijs iodine value, 172.4 (theoretical 172.4).

METHYL LINOLENATE
Prepared from highly purified hexabromostearic acid (melting point 185.0°C) by debromination and fractional distillation. Wijs iodine value 261.4 (theoretical 260.4).

As a service to scientific investigators, the Hormel Foundation offers limited quantities of pure, unsaturated fatty acids and esters. The three substances described above are now available.

Since they have been prepared on a laboratory scale, they are necessarily priced higher than if commercially manufactured. Yet they cost the individual experimenter considerably less than preparing the material himself.

If the response justifies the continuation of this project, other unsaturated fatty acids and esters will be prepared and offered. It is hoped also that production in larger quantities than at present will eventually lower prices.

Materials will be shipped in sealed vessels completely protected from oxidation. For further descriptive details and prices, write

THE HORMEL FOUNDATION
Austin, Minnesota
FUNDAMENTAL PRINCIPLES OF BACTERIOLOGY. New Third Edition

By ARTHUR J. SALLE, University of California at Los Angeles. 643 pages, 6 x 9, 253 illustrations, $6.00.

This revision of a popular text has been expanded to include material on medical bacteriology. Pathogens are more fully treated, and the discussion of such organisms as bacteria, viruses, and rickettsias has been brought up to date. The emphasis on chemistry, the morphological and physiological material, and the wealth of excellent illustrations are still leading features of the text.

SOLID GEOMETRY

By JAMES S. FRAME. Michigan State College. Ready this spring.

Departing from the traditional treatment of solid geometry as a succession of formal propositions and proofs, this text aims to prepare the student for college work in mathematics and engineering. It is based on plane geometry and elementary algebra, and includes carefully stated assumptions, stimulating oral questions, and well-assorted written exercises. A distinctive feature is a simplified method of drawing three dimensional figures in orthographic perspective with a patented trimetric ruler supplied with the book.

VIBRATION AND SOUND. New second edition

By PHILIP M. MORSE, Director, Brookhaven National Laboratory. 466 pages, 6 x 9, $5.50.

This revision represents a thorough, up-to-date treatment of the theory of vibration and sound for students of physics and communications engineering. The book gives a general introduction to the subject, followed by a series of examples in the method of theoretical physics—how a theoretical physicist attacks a problem and how he obtains a solution. Particular attention has been given to the material on strings, and to the case of plane waves in tubes, which was revised to parallel the methods and terminology now current in microwave discussions.

INTRODUCTION TO CHEMICAL THERMODYNAMICS. Second edition in press

By L. E. STEINER. Oberlin College. International Chemical Series.

A moderate revision of a text for students of chemistry. New material has been added both in the text and in the problems. Many sections have been rewritten, either to include new material, or for greater logic and clarity. Additional material on real gases has been added and new data on thermodynamics of hydrocarbons has been introduced.

For Dietary Uniformity

FEED PURINA LABORATORY CHOW

Where experimental work requires a uniform dietary history through several generations, Purina Laboratory Chow does a first-rate job of feeding lab animals. It is a constant-formula diet for rats, mice, dogs, cats or monkeys. Laboratory Chow is economical and easy to feed, too, because it comes in Checker form. Try Purina Laboratory Chow—built for dietary uniformity.

GENERAL BIOLOGY

Third Edition

By James W. Mavor

Written in a clear simple style and maintaining a logical arrangement of material, the new edition of this widely popular text, has been revised throughout and much new material added. New chapters have been included to give a background for the chemistry and physics of the cell. The material on hormones and vitamins has been brought up to date; the treatment of metabolism has been shifted to a new chapter "Food Materials and Metabolism;" and the chapters on the Mechanism of Evolution and Early Man have been largely rewritten. The text makes possible different treatments of subject matter and is designed for a year's course.

$5.50

LABORATORY EXERCISES IN GENERAL BIOLOGY

Third Edition

Designed to accompany the new edition of General Biology, this book provides a wide range of subjects and considerable choice in the selection of laboratory material. Time-saving devices both for the instructor and for the student are employed. Sample schedules for year courses having one and two laboratory periods per week are given. Work sheets are included.

$3.25

A set of three slidefilms, 145 numbered frames, is now available for use with the Third Edition of Mavor: General Biology. Order from the college Department.

$15.00 a set

HUMAN GENETICS

By R. Ruggles Gates

This comprehensive and authoritative work approaches the subject from a broad biological point of view, and makes use of embryology, morphology, physiology, biochemistry, and anthropology in explaining the development and inheritance of both normal and abnormal conditions. Throughout the chapters in which various physical and physiological abnormalities are considered, experiments, especially with mammals, are referred to whenever they throw light on any problem of human genetics. The work includes a large selected list of references and a full index. 1518 pages.

Two-volume Set $15.00

PRINCIPLES OF CHEMISTRY

By Joel H. Hildebrand

Extensively revised, the fifth edition of this well-known text contains new chapters on carbonic acid, and its ions, systems of acids and bases, and the structure of inorganic compounds—as well as numerous alterations and additions throughout the text to bring it up to date. Sections have been added on polymers, silicones, and transuranium elements, and recent discoveries in atomic structure have been included.

Fifth Edition $4.25

All insertions are accompanied by correct remittance and must be in 10 days in advance of publication date to the Advertising Department, AAAS, 1515 Massachusetts Avenue, N. W., Washington 5, D. C.

POSITIONS WANTED

The California Medical Bureau, Agency for scientific and lay personnel in medicine, biology, chemistry, physics and allied sciences, supplies teachers, research workers, laboratory assistants, skilled office help. Prompt service. Registration free. Your patronage respectfully solicited. The California Medical Bureau, Agency, Arcade Medical Center, 696 Colorado Street, Pasadena 1, California.

Biochemist: Ph.D.; several years successful teaching experience; seven years, director of research and production in industry; has done considerable work in isolation and synthesis of vitamins, amino acids and purine drugs; for further information, please write Burnice Larson, Director, Medical Bureau, Palmolive Building, Chicago 11.

A research assistant, preferably with a Ph.D. or M.D. degree is needed from July 1948 to July 1949 to investigate the physiology of the fetus. Address Director, J. J. Duncan. Department of Physiology, University of Tennessee, Memphis, Tennessee.

Wanted: Bacteriology teacher: Large southern college wants established man Ph.D., Age 30-40; energy and ambition important. Rank and salary contingent. Correspondence invited. Box 248A, SCIENCE.

Graduate assistantships in bacteriology: Require about twelve hours of laboratory teaching or preparations per week. Candidates must enter the College of bacteriology. Eight credit hours of graduate study leading to master's or doctor's degree a semester permitted. Stipend $1000 for academic year. Send application for admission to Graduate School to the Dean. Send personal data, transcript, and recommendations to: Chairman, Department of Bacteriology, University of Michigan, Ann Arbor.

Bacteriologist: A well-established manufacturer of sanitary chemicals requires the services of a bacteriologist, preferably with experience in public health sanitation, to screen and evaluate new chemicals as bacteriological control agents, developing new procedures as needed; to formulate sanitary chemical compositions; and to conduct performance studies in the field. Ph.D. preferred. Training in organic chemistry and mycology helpful. Address reply to: Director, Whitemarsh Research Laboratories, Pennsylvania Salt Manufacturing Co., Box 4858, Chestnut Hill P. O., Philadelphia 18, Pa.

Bacteriologist: College graduate, some background in chemistry. Take charge of section in research project. Salary to $4,200. Box 178A, SCIENCE.

Bacteriologist Ph.D. preferably with Virus training and experience, to assume production and developmental responsibilities in a large company producing biologicals. Box 886, Real service, 110 West 34th St., New York City.

Entomologist: Capable contact man for technical service work with agricultural chemicals. Ability to evaluate new insecticide developments and conduct field tests essential. Some experience required. Headquarters located in New York City. Box 193A, SCIENCE.

Summer Fellowship, Biological Laboratory, Cold Spring Harbor, L. I., N. Y., Electrophoretic fractionation of pollen extracts. Write Dr. H. A. Abramson.

Wanted: Physics teacher to head department September, 1948, in large accredited liberal arts college. Moderate living expenses in splendid college community. State qualifications, interview may be arranged at our expense. President, Lincoln Memorial University, Harrogate, Tennessee.

Personnel Placement

University of Queensland
Associate Professor of Anatomy
(Sub-department of Human Embryology and Histology)

Applications are invited for the above mentioned position and must be forwarded to the Registrar, University of Queensland, Brisbane, Queensland, Australia, not later than Monday, the 31st May, 1948. The salary range attached to the position is £3810-£4100 per annum but this is subject to cost of living fluctuations. It is at present subject to the addition of a cost of living allowance at the rate of £6.26 per annum. The rate of commencing salary within the advertised range will depend upon the qualifications and experience of the appointees. Conditions of appointment and application forms may be obtained from the Australian Embassy, 3117 Woodland Drive, Washington, D. C. The Australian Consultate-General, 206 Sansome Street, San Francisco, and the Australian Consulate-General, 636 Fifth Avenue, New York City.

C. Page Hanly, Registrar.

Positions Open: (a) Bacteriologist; Ph.D. or M.D. to head department of bacteriology, university school of medicine; well staffed department; preferably one qualified to develop program. (b) Psychologist; teaching appointment; rank associate professor; Ph.D. preferred, masters degree eligible. (c) Assistant professor in physiology; eastern university. (d) Instructor in general chemistry; state teachers college; town of 30,000; $5500, nine-month year. (e) Assistant professor of pharmacology; preferably Ph.D. with interest in microphatology; duties consist of part-time teaching and research involving industrial toxicology and pharmacology; East. (f) Ph.D. in soil microbiology; duties, research with responsibility for teaching organic and inorganic chemistry college of agriculture. (g) Research assistant or research associate in physiology; long-term research grant involving production and treatment of edible; Ph.D. or possibly M.S. in physiology, or biochemistry; East. (h) Diagnostician in electronophagology; Ph.D. desirable, candidate with masters degree eligible; hospital for nervous and mental diseases; department recently equipped with six channel grass electronophagographic machine; $5600. (i) Enzymologist; young man under 35 preferred; research department of pharmaceutical company. (j) Bacteriologist and biochemist; Ph.D.'s experience in antibiotics; new and unusual research laboratories; biological man.s required; hospital for nervous and mental diseases; Middle West. (k) Assistant professor of plant pathology; Ph.D., Michigan, Ann Arbor, or equivalent. (l) Assistant professor of human anatomy; modern laboratory facilities; University of California, Berkeley. (m) Assistant professor of clinical pathology; medical school; University of California, Los Angeles.

Bibliographer: Trained in fundamentals of physical science, with some training or experience in compiling and abstracting technical material. Work under direction of librarian in natural sciences, industrial technology, engineering, economics, and related subjects. Stanford Research Institute, Stanford, California.

Medical and Research Writing for Scientists, libraries, and pharmaceutical industry. Comprehensive excerpts, reviews, translations, searching scientific literature (French, Italian, Spanish, German) by former university professor still connected with medical college, medical and scientific societies and libraries. Box 235A, SCIENCE.
FOR observing and measuring high speed phenomena—most of which can be studied in no other way—the Kodak High Speed Camera offers excellent potentialities for precise work.

It provides direct photographic observation, based on a film-travel speed that is precisely commensurate with the exposure speed. A rotating optical plate shifts the image in synchronism with the continuously moving film.

Three thousand pictures can be made in a second, the timing of each accurately calibrated by a built-in timer. This device, which uses an argon lamp that can be excited at convenient AC frequency, puts flash marks along the edge of the film as it passes through the camera. Simply counting the number of frames between these marks, as against the flash frequency used, gives action time down to the millisecond.

You are invited to write to Kodak regarding problems that high speed photography might solve. A booklet on the Kodak High Speed Camera is also available for the asking.

Eastman Kodak Company
Industrial Photographic Division
Rochester 4, N. Y.

HIGH SPEED MOTION PICTURES of cavity left by the passing of a 5mm. diameter aluminum rod through pure corn syrup (free of gas nuclei) at a maximum speed of 12.2 meters per second. Note that collapse of cavity is from above downward, and that remnants of the cavity disappear in frame 74 and then reappear. (From photographs made with Kodak High Speed Camera, "On Cavity Formation in Water," Harvey, McElroy, and Whitely, J. App. Phys., 18, 162.)

Time-motion "micrometer"...

Kodak High Speed Camera makes accurate time-motion observations to within a 3000th measured part of a second!
Keep Down Contamination

With the TRACERLAB SU-3 Monitor

The SU-3 LABORATORY MONITOR is an essential instrument for laboratories using radioisotopes. It is a compact, direct reading, A.C. operated counting rate meter with three full scale ranges of 200, 2000, and 20,000 counts per minute. Included with it is a thin mica window G-M tube of high sensitivity suitable for detecting low energy beta emitters such as C-14 and S-35. A high degree of portability is possible since the G-M tube is mounted in a handy chrome-plated probe attached to a convenient length of flexible cable. A built-in loud speaker permits audible indication of pulses from the G-M tube. Calibration checks can be made at any time by merely turning a switch. Several important uses are: checking bench tops and laboratory apparatus to prevent contamination of successive experimental runs, steady monitoring of background counting rate to detect significant fluctuations, and checking hands or laboratory coats for contamination.

Price: $285.00 with 3-4 mg./cm.² Tracerlab Geiger tube.
$315.00 with less than 2 mg./cm.² Tracerlab Geiger tube.
F.O.B. Boston (Export and Canadian price — add 10%)
A Progress Report on Phase Microscopy

EVER since American Optical Company developed the first phase microscope to be shown in this country, scientists have awaited the day when it would be readily available.

The equipment revealed detail almost invisible under the ordinary microscope—particularly in unstained and living material. Bacteria, tissue cultures, blood, protozoa, textile fibers, minerals, crystalline substances, plastics and other transparent materials—all could be studied more effectively.

However, much work remained to provide suitable phase objectives for many specific purposes. Sales efforts were postponed in favor of continued development.

After years of research in cooperation with many leading scientists, the wisdom of this policy was demonstrated at the 1947 AAAS Convention in Chicago. Many visitors brought their own materials in which significant detail could be seen only under the Spencer Phase Microscope.

The superior results are largely due to the variety of Spencer phase objectives. For each magnification, there are three different types of objectives—Dark Contrast, Bright Contrast and B Minus Contrast, each in three degrees of contrast. More than 20 in all, they enable the user to select the best equipment for his needs...and provide flexibility far greater than equipment giving only one type of contrast.

Production is being geared to keep pace with the increasing demand for Spencer Phase Microscopes. They will soon be available through qualified distributors. Watch for further announcements.
