New books, ready soon, to help you in your work or study—

**THE AVIAN EGG**
*By Alexis L. Romanoff, Associate Professor in Chemical Embryology, Cornell University, and Anastasia J. Romanoff, B.Sc.*

Over 20 years in preparation, this book is the most exhaustive and factual treatise ever written on birds’ eggs. It is organized into three main parts. The first of these covers the laying, formation, external characteristics, structure, and abnormalities of the egg. Special emphasis is placed on variability and the factors that cause it. The second section deals in great detail with the chemical and physical properties of the egg and delves into a number of the very interesting, but less familiar, aspects of the egg’s biological potentiality. In the last part of the book there is a survey of the egg’s value as food, a discussion of methods of preservation, and a treatment of its uses in industry.

Written to appeal to both scientist and layman, the book is extensively illustrated by the senior author, covers material gathered from journals the world over, and cites over 2600 references.

Ready in October  
Approx. 817 pages, 434 illus.  
Probable price, $17.00

---

**A TEXTBOOK OF ENTOMOLOGY**
*By Herbert H. Ross, Systematic Entomologist, Illinois State Natural History Survey, and Professor of Entomology, University of Illinois.*

Stimulated by the need for a book that would present the fundamental aspects of entomology in such a manner as to give a general idea and an overall picture of the subject, Professor Ross has written a book which reorients entomology within the general field of biology. He presents a concise, interesting history of entomology, treating it in terms of basic causes rather than as a long list of dates and names. The field of paleontology is thoroughly discussed, and the dynamic rise of insects in relation to the forest surrounding them is fully considered. To achieve simplicity physiology is treated separately, and by this organization the author is enabled to approach this particular study from the functional rather than the structural point of view. Well written, well planned, and thoroughly usable the text matter is accompanied by excellent illustrations, 434 in all.

Ready in October  
Approx. 498 pages, 434 illus.  
Probable price, $6.00

---

**INTRODUCTION TO APPLIED MATHEMATICS**
*By Francis D. Murnaghan, Professor of Applied Mathematics and Chairman, Department of Mathematics, The Johns Hopkins University.*

This is to be the first book in the new Wiley series in applied mathematics, of which Dr. I. S. Sokolnikoff is editor. Professor Murnaghan’s work covers vector and matrix calculus, harmonic analysis, spherical harmonics and Bessel functions, boundary value problems, integral equations, calculus of variations, and operational calculus. The book is written on the premise that in order to use the applications of mathematics one must have a thorough understanding of the principles involved. The coverage is therefore, especially wide. *Introduction to Applied Mathematics* is a detailed and self-contained study of the mathematics used in modern physics and engineering. It will have special appeal for graduate students and scientific workers interested in varied types of mathematics.

Ready in August  
Approx. 388 pages, 41 illus.  
$5.00

---

**MICROWAVES AND RADAR ELECTRONICS**
*By Ernest C. Pollard, Associate Professor of Physics, and Julian M. Sturtevant, Associate Professor of Chemistry, both at Yale University.*

This timely new book is concerned with the development of microwaves, their use in radar communications and absorption spectroscopy, high energy accelerators, and fast timing. The physics of electric and magnetic fields are fully discussed, with the stress placed on the reality of the electron and magnetic fields. A description of the equipment which grew up around microwave radar is included. Also, the authors tell of the new fields of research and development which are still springing from wartime research. Watch for the publication of this highly important scientific volume.

Ready in November  
Approx. 462 pages, 195 illus.  
Probable price, $6.00

Forthcoming Editions

CALCULATIONS OF QUANTITATIVE ANALYSIS
By Philip W. West
Associate Professor and Head of the Division of Analytic Chemistry,
Louisiana State University

Designed to be almost completely self-teaching, this new text provides a readily understandable survey of all the fundamental calculations of both qualitative and quantitative analysis. The subject is developed logically with a careful sequence of thought, and special attention has been given to those topics most likely to be confusing. Tables of molecular as well as atomic weights are included.
To be published this spring. $3.00 (probable)

INORGANIC PROCESS INDUSTRIES
By Kenneth A. Kobe
Professor of Chemical Engineering, University of Texas

This book presents the theory of inorganic processes and shows how this theory is applied in basic procedures in industry and in the design and operation of equipment. It provides an excellent discussion of fundamental sciences and technology, equipment, processing methods, flow sheets, etc. The industrial aspects of marketing and statistics, and the relative economics of different processing methods are fully dealt with.
To be published this spring. $5.75 (probable)

PHYSICO CHEMICAL EXPERIMENTS
Revised Edition
By Robert Livingston
Professor of Physical Chemistry, University of Minnesota

In the revised edition of this laboratory manual the author has clarified certain explanations, modified the technique of a few experiments to simplify the student’s laboratory work, and added new experiments—one in which heats of combustion are measured by means of a commercial bomb calorimeter, and a quantitative study in the field of colloid chemistry, which requires only simple apparatus.
To be published this spring. $3.00 (probable)

THE MACMILLAN COMPANY • 60 Fifth Avenue • New York 11
ARGinine...essential or non-essential?

Rose has conclusively demonstrated that the rat requires dietary arginine for optimal growth. It is even more essential in the diet of birds and chicks, since they seem to lack the ability to synthesize it at all.

In man, arginine was found non-essential for nitrogen balance. Nevertheless, Holt and Albanese showed that an arginine deficiency affected spermatogenesis, and that its replacement in the diet caused a reversal of the deficiency. Holt suggests that changes in hormone volume are too small to be reflected in nitrogen balance studies; he writes, "...it seems necessary to conclude that arginine is a human dietary essential."

Arginine and other amino acids are available from stock. Write for literature and price list.

Interchemical Corporation
BIOCHEMICAL DIVISION - UNION, NEW JERSEY
HEAT CONDUCTION. With Engineering and Geological Applications

By Leonard R. Ingersoll, University of Wisconsin; Otto J. Zobel, Bell Telephone Laboratories, Inc.; and Alfred C. Ingersoll, University of Wisconsin. International Series in Pure and Applied Physics. 278 pages, $4.00

- Presents the theory of heat conduction with discussion of many practical applications, including such topics as ground heat-pump sources, geysers, periodic flow, electric welding, post-glacial time calculations, canning and drying operations, etc. A feature of the book is the chapter on graphical and other methods.

FOOD PLANT SANITATION

By Milton E. Parker, Counselor in Food Production Development. McGraw-Hill Series in Food Technology. 468 pages, $6.00

- Offers a new approach to the subject in that it outlines and discusses all of the pertinent phases of sanitary practice of interest to the processors of food. The latest information concerning such practices is discussed in sufficient detail to acquaint the student with their merits and limitations.

PRINCIPLES OF HIGH-POLYMER THEORY AND PRACTICE

By A. X. Schmidt and C. A. Marlies, College of the City of New York. Chemical Engineering Series. Ready in August

- Covers the principles of high-polymer theory and practice in a coordinated fashion which fosters basic understanding of the formation, properties, manufacture, development, fabrication and application of plastics, rubbers, fibers, surface coatings, adhesives, etc.

A TEXTBOOK OF GENERAL PHYSIOLOGY. New 4th edition

- A thorough revision of this well-known college text. In the revision particular attention is given to excitation, contraction, structure of living matter, permeability of cells, regulation of respiration, oxidation, and internal secretions. New material on nutrition is included.

PRACTICAL ASTRONOMY. New 2nd edition

- This is more than a new edition of the author's Textbook of Practical Astronomy. Much of the old material has been rewritten and new added to bring the book up to date and to broaden the point of view. The book is about 50% longer, and more than half of the illustrative material is new.

All insertions must be accompanied by correct remittance and sent 14 days in advance of publication date to the Advertising Department, AAAS, 1515 Massachusetts Avenue, N. W., Washington 5, D. C.

POSITIONS WANTED

Geologist: Ph.D. Ten years academic, commercial, governmental experience. Interested teaching with publication opportunities. Available June, September. Box 328A, SCIENCE. X

Illustrator: Medical and Biological. Available for freelance or staff position. Trained and experienced. Box 367A, SCIENCE. X

Physiologist is available; Ph.D. (Physiology, Biochemistry, Anatomy); two years' teaching experience; past several years, associate professor physiology and pharmacology, university medical school; for further information, please write Burneise Larson, Director, Medical Bureau, Palmolive Building, Chicago 11. X

Statistician: M.S. in Mathematical statistics; M.S.P.H. in public health statistics; year's research experience; five years, statistician with public health organization, for further information, please write Burneise Larson, Director, Medical Bureau, Palmolive Building, Chicago 11. X

POSITIONS OPEN

Bacteriologist: to assist in teaching microbiology at a Medical School. Instructor or assistant professor, depending on experience. Box 364A, SCIENCE. 7-16

Bacteriologist, B.S. with some experience or M.S., wanted by well-established midwest pharmaceutical company near large city for research on vaccines, chemotherapeutic agents, etc. Training should include immunology, serology and animal experimentation. Box 370A, SCIENCE. X

Positions Open: (a) Chemists, Ph.D.'s, experienced in fields of organic, inorganic or analytical chemistry; preferably men experienced in industrial insulations, fiber products and resins; large industrial company; salaries to $600 monthly. (b) Bacteriologist to take charge of new bacteriology department in connection with research for new drug products, large biological manufacturing company having expansion program; salary range $4000-$5000. (c) Young man with basic training in physiology and pharmacology to undertake toxicity and pharmacological studies in new compounds not yet approved by drug administration; pharmaceutical company; East. (d) Professor and head of department of physiology, university medical school having important expansion program; although physician preferred, Ph.D. eligible; should be clinically minded and interested in research. (e) Biochemist or chemist, Ph.D. qualified to conduct research and educational program; group of pathologists engaged in diagnostic clinical pathology for various hospitals and expanding into field of research and medical education; university town, Middle West. (f) Bacteriologist for instructorship or associate professorship; experience in virology and immunology desirable. 56-2 Medical Bureau (Burneise Larson, Director), Palmolive Building, Chicago 11. X

"ZIRCONARC" PHOTOMICROGRAPHIC LAMP

For better black-and-white and color photomicrographs

Combines the concentrated light of the Western Union arc light bulb (about 1 mm dia.) with our fluorite-coated, 7-element aplanatic optical system of highest correction, free from chromatic aberration... Device for double intensity exposures... Practically harmless to living cultures... Built with the same precision as the microscope itself. Over-all length of lamp, 10". Height, 6½". Base, 4½ x 6½". Price, complete with starting box and 40-watt bulb, $325. Order direct or from leading supply dealers.

Centennial Celebration

WHAT, WHEN, WHERE, and HOW TO GET THERE:—questions about sessions of the Centennial Meeting in Washington, September 13-17, will be answered completely in the General Program. To be sure of having the answers in advance, so that you may plan which sessions to attend and otherwise make the most of your time in Washington, register now for the meeting in September.

The General Program and informative publications about Washington will be mailed to advance registrants in mid-August. The Program will list the speakers, the titles of their papers and the location of each session and special event. In addition, it will contain information about hotels, transportation, eating facilities, messenger service, lost and found arrangements, and points of interest to the historically-minded as well as to those interested in scientific research and its administration in the nation’s capital. Moreover, the General Program will be a treasured memento of one of the outstanding events in the history of organized science in America.

In order that you may plan in advance your schedule of activities during the Centennial Celebration, please fill in the registration blank below and send it, together with your check or money order for the correct fee, to the A.A.A.S. Administrative Offices, 1515 Massachusetts Avenue, N.W., Washington 5, D.C. (Your convention address may be filled in later.) This information will be placed on file in the Visible Directory to be located in the Statler Hotel during the meetings, where it will be easily accessible for quick inspection. Finding your friends and having them find you will be no problem if you and they have registered. For your convenience addresses of friends may be obtained by calling EX. 1000 and asking for the A.A.A.S. Visible Directory.

If you are planning to participate in the Centenary, don’t fail to register now.

NEW PACKAGED RADIOCHEMICALS

For the first time it is now possible to obtain compounds tagged with Carbon-14 almost as easily as ordinary chemical compounds. Tracerlab is carrying out an extensive program of synthesizing a number of the more useful intermediates tagged with Carbon-14 and is making sufficient quantities of each to permit shipment from stock. Compounds now available for immediate delivery are:

- Sodium Cyanide
- Methyl Iodide
- Barium Carbide
- Carboxyl labeled Sodium Acetate
- Ethyl Alcohol
- Methyl Alcohol
- Carboxyl labeled Ethyl Acetate
- Acetylene

Included in the list of compounds ready for sale within the next several months are:

- Methylene labeled Ethyl Alcohol and Ethyl Iodide
- Benzene
- Methyl labeled Sodium Acetate and Ethyl Acetate
- Methyl labeled Ethyl Alcohol and Ethyl Iodide

Atomic Energy Commission approval is required for each order before shipment can be made. Write for complete details of ordering procedure, price schedules, and specifications.

Tracerlab Commercial Radioactivity Center

TRACERLAB INC., 55 OLIVER STREET, BOSTON 10, MASS.
GRADUATED QUARTZ WEDGE

in One Compact Unit

WEDGE... eyepiece... holder... all three essential units are combined in a single assembly. That is why the Spencer Graduated Quartz Wedge is so simple, compact and convenient to operate.

The wedge unit is graduated in 10 mμ intervals from -500 to +2500 mμ, engraved in a semi-transparent metallic coating. For ease and accuracy of measurement, the lines appear bright on a grey area at the edge of the field.

The holder unit, with cross lines and Polaroid discs, clamps on top of the Spencer Polarizing Microscope body tube. A Ramsden eyepiece focuses on both scale and cross lines.

Further information about this convenient unit for measuring retardation may be obtained by writing Dept. G1.
