you know your tissues will spread evenly

The water temperature will be just right for smooth, even spreading: never too hot or too cold. No melting paraffin to distort tissues; no folds or wrinkles. No bubbles due to frequent water change . . . temperature stays constant day in, day out. Bulletin 6320 gives particulars: send for it.

TECHNICON COMPANY, 215 E. 149th St., New York 51, N. Y.

De Robertis, Nowinski and Saez' Textbook of General Cytology

New!—Elementary in its approach—up-to-date in its methods and principles—this noteworthy text is unusually well-suited to undergraduate college courses. It is a synthesis of the most important aspects of cellular structure and function as encountered in man and in animals. The "ultrastructure" of the cell is well explored.

By E. D. P. DE ROBERTIS, M.D., Department of Biology, Massachusetts Institute of Technology; W. W. NOWINSKI, Ph.D., Department of Anatomy, University of Texas Medical School; and FRANCISCO A. SAEZ, Ph.D., Institute for the Investigation of Biological Sciences, Montevideo. A translation by WARREN ANDREW, Ph.D., with changes and additions, of the Spanish text "Citologia General" by the same authors. 345 pages, 6" x 9", with 143 illustrations, some in color. $5.50

Turner's General Endocrinology

New!—Here, for the first time, is a truly biologic approach to endocrinology. It is an ideal text for undergraduate courses. The entire story of chemical regulators is told simply and clearly—and augmented by 349 beautiful illustrations.

By C. DONNELL TURNER, Ph.D., Associate Professor of Zoology, Northwestern University. 604 pages, 6" x 9", with 349 illustrations on 164 figures. $6.75

Maximow and Bloom's Textbook of Histology

New (5th) Edition—By adapting modern chemical and physical methods to the problems of histology, Dr. Bloom has completely revitalized this ever-popular classic text.

By ALEXANDER A. MAXIMOW, Late Professor of Anatomy; and WILLIAM BLOOM, Professor of Anatomy, University of Chicago. 700 pages, 6¼" x 10", with 562 illustrations, 32 in color. $8.50

Anatomically speaking . . .

A brief mention of some Blakiston books that, between them, approach Anatomy from just about every useful point of view.

BUNDY: Anatomy and Physiology
A text for beginning students so concise, well-planned and satisfactory to all concerned that it has reached its 7th edition. 490 pages, 283 illustrations. $3.50.

DAVISON'S Mammalian Anatomy
A very popular text that uses the cat in teaching vertebrate zoology. Also in its 7th edition, this text is valued for its clear, detailed instructions and unique drawings. Intended for students majoring in psychology, education, physiology, biology, pre-medical and other courses. 349 pages, 187 illustrations. $4.25.

EDWARDS: Concise Anatomy
An introductory course on the structure of the human body. A new book with a future among students of nursing, dental hygiene, physical education, physical therapy, science teaching in normal schools and liberal arts colleges. 548 pages, 472 illustrations. $5.50.

EDWARDS: Synopsis of General Anatomy
A new book reprinting the first seven chapters of the author's "Concise Anatomy", mentioned above. Highly approved as suitable for use as a text in one-semester and orientation courses taken as preliminary to specialized study. 151 pages, 76 illustrations. $2.75.

MORRIS: Textbook of Human Anatomy
One of the most famous and standard of all medical books, now in its 10th edition. Written by eminent teaching anatomists for the medical student who intends to practice, and for the library of physicians and surgeons generally. 1641 pages, 1155 illustrations. $14.00.

POTTER: Compend of Human Anatomy
A concise text of high value to students, physicians, nurses and others preparing to pass an examination. Though planned for quick review, it offers great help in acquiring and retaining an important body of information. 430 pages, 139 illustrations. $2.50.

THE BLAKISTON COMPANY
Philadelphia 5, Pa.
Cathode-Ray OSCILLOSCOPE

No. 71551 Cathode-Ray Oscilloscope is of improved design and excellent manufacture. Its sweep circuit has improved linearity over the entire range of frequencies. Its deflection sensitivity is 1 volt (r.m.s.) per inch with gain control at maximum and the input impedance is .5 megohms across approximately 20 mmf. Usable frequency range for amplifier is 10 cycles to 300,000 cycles per second. Sweep frequencies range from 10 cycles to 60,000 cycles per second. The cathode-ray tube has a screen of medium persistence. A tap is provided on the front panel for 6 volts AC at ½ amp. for furnishing 50 to 60 cycle line current to either vertical or horizontal plates. Terminals are provided on the rear panel for direct connection to the deflecting plates for use when impedance, voltage or frequency requirements preclude connection through the amplifiers. The graph screen is easily adjusted or removed if desired. Dimensions, over-all: height 12½ inches; width, 8 inches; depth, 14 inches; weight, 21 lbs.

Available at ........................................... $95.75

No. 71552 Cenco Cathode-Ray Oscilloscope with characteristics similar to 71551, but made with a 5-inch screen, is available at $135.00
LEITZ INCLINED BINOCULAR MICROSCOPE BS 25/92
FOR THE MEDICAL PROFESSION

The purchase of a microscope is an investment for life. For that only the best is good enough. A microscope should not only have superior mechanical features, but the optical performance, the crispness of the image and the flat field are the important things to look for.

There are almost 400,000 Leitz microscopes in use throughout the world. Their superior craftsmanship has been proven again and again, backed by a company that will soon enter the century mark of experience in the manufacture of scientific instruments known in all corners of the globe. For particulars on Leitz Inclined Binoculars BS 25/92 ask for Catalog No. 403.

E. LEITZ INC., 304 HUDSON ST., NEW YORK 13, N. Y.
Ready this fall

INTRODUCTION TO HISTORICAL GEOLOGY

By Raymond C. Moore, Professor of Geology, University of Kansas

In this text of unusual interest, a universally recognized authority presents an exceptionally readable, well-organized account of the important features of earth history, including evolution of plants and animals recorded by fossils. Avoiding technical terminology, the author makes clearly understandable how observed geologic features furnish a record of past conditions and events.

Now ready

PRINCIPLES OF MATHEMATICAL PHYSICS. New Second Edition

By William V. Houston, President, Rice Institute. International Series in Pure and Applied Physics. 363 pages, 6 x 9, $5.00

Supplies mathematical methods of treating physical problems of increasing complexity and fills the gap between elementary courses in physics and advanced courses on special subjects. Problems as a teaching aid are emphasized. Many of the discussions have been clarified, and a considerable amount of new material has been added.

Ready in October

PRINCIPLES OF MECHANICS. New Second Edition

By John L. Synge, Professor of Mathematics, Carnegie Institute of Technology and B. A. Griffith, Assistant Professor of Mathematics, University of Toronto.

A revision of a well-known text for intermediate courses in mathematics, physics, and engineering mechanics departments. Changes throughout clarify the material, and a number of sections dealing with units and dimensions have been added. An outstanding feature is the account of the motion of a charged particle in an electromagnetic field. The new treatment of this material is more comprehensive, yet much simpler in principle than that appearing in the first edition. A section on electron optics is included.

ESSENTIALS OF PSYCHOLOGY. An Introductory Textbook

By Donald M. Johnson, Professor and Head of the Department of Psychology, University of Minnesota, Duluth Branch. 490 pages, 6 x 9, illustrated, $3.50

This new text written for the beginning student gives a well-balanced survey of the subject which will equip him with the standard psychological topics, methods, and terminology. The organization of the book should be particularly helpful in that it integrates the general principles and individual differences, and experimental psychology and clinical psychology. Many illustrations, examples of psychological tests, pictographs, etc., enliven the work and heighten the students' interest.

Science, September 17, 1948, Vol. 108
BELEEVING that a full knowledge of our scientists' vitally important atomic research accomplishments will make possible a marked increase in more efficient technology, the United States Atomic Energy Commission and Columbia University released a nation-wide announcement on March 4, 1948, outlining their plans for public distribution and sale of the first two volumes of the Manhattan Project Technical Section of the National Nuclear Energy Series.

The approximately sixty-volume Manhattan Project Technical Section will be published by the McGraw-Hill Book Company handling the publication for the Atomic Energy Commission and its research contractors.

Governmental planning of the publication of atomic and nuclear discoveries and developments began in May 1944, and in November 1945 the project was authorized under the name "Manhattan Project Technical Series," since the work was done largely under the Manhattan Project, War Department, predecessor of the U. S. Atomic Energy Commission.

Among the volumes scheduled for early publication:

**HISTOPATHOLOGY OF IRRADIATION FROM EXTERNAL AND INTERNAL SOURCES**

*Edited by WILLIAM BLOOM, M.D., University of Chicago*

*Approximately 875 pages*

**PHARMACOLOGY AND TOXICOLOGY OF URANIUM COMPOUNDS**

*With Sections on the Pharmacology and Toxicology of Certain Fluorides and Special Materials.*

*Edited by Carl Voegtlin, M.D., formerly Chief, Division of Pharmacology, National Institute of Health, U. S. Public Health Service; formerly Director of Cancer Research and Chief of the National Cancer Institute; former President of the Society of Pharmacology and the association of Cancer Research; and Harold C. Hodg, Professor of Pharmacology and Toxicology, University of Rochester, School of Medicine and Dentistry.*
