CONTENTS

Address of the President of the United States .............................................. 313
The One World of Stars: Harlow Shapley ....................................................... 315

News and Notes .................................................................................................. 322

Technical Papers

The Quantitative Theory of Autoradiography Illustrated Through Experiments With P32 in the Chick Embryo:
Herman Branson and Louis A. Hansborough 327

Crystalline Serotonin: Maurice M. Rapport, Arda Alden Green, and Irene H. Page 329

The Action of Ryanodine on the Contractile Process in Striated Muscle:
G. A. Edwards, et al. ....................................................................................... 330

The Homing Tendency of Shad:
Edgar H. Hollis ............................................................................................... 332

Effect of Antiserum and Prolonged Cultivation on the Agglutinative Characteristics of a Type I Meningococcus:
Dorothy Neuhof Naiman .............................................................................. 334

The Inactivation of Invertase by Tyrosinase:
Irwin W. Sizer .................................................................................................. 335

Mammary Carcinoma in Female Rats Fed 2-Acetylaminofluorene:
R. W. Engel and D. H. Copeland .................................................................. 336

In the Laboratory

A Simple Micro-Beaker for Use With the Beckman pH Meter (Model G):
Victor H. Dietz ............................................................................................... 338

A Rapid Method for Preparing DDT in the Laboratory:
Joseph M. Ginsburg ...................................................................................... 339

Radioangiography: A New Method for Studying the Blood Flow Through the Chambers of the Heart in Human Beings:
Myron Primzmetal, et al. ............................................................................... 340

Book Reviews

Principles of jet propulsion and gas turbines:
M. J. Zuerow.
Reviewed by Howard S. Seifert ..................................................................... 342

Advances in military medicine:
C. Andrus, et al. (Eds.)
Reviewed by Morris C. Leikind .................................................................... 342
