you needn't put up with "shoebox" block filing

Ask for a six-month-old paraffin block in many an otherwise well-ordered laboratory, and the hunt's on. Likely as not it means hours of prowling through a weird behind-the-scenes jumble of dusty, dog-eared cartons . . . trying everyone's temper, taking everyone's time, piling up hidden costs.

That's all out now, with this new "Lab-aid" block filing cabinet. You file your paraffin blocks in small, shipshape, white cardboard boxes, which come in varied sizes to accommodate all sorts of blocks, however irregular or out-sized. The boxes knock down, but spring to shape in a moment, so they're no storage problem. They're so proportioned that they fit snugly, row on row, in the shallow steel drawers.

The all-steel cabinet holds ten drawers, equipped with combination drawer-pulls and label HOLDERS at each end. Each drawer will accommodate a gross of the 1 1/2" boxes: other sizes in ratio (see the filled drawers above). Multiply that by ten and you've some idea of the large capacity of this compact section (it's only 19" square by 12" high). That's because there's no waste space . . . every cubic inch is a filing inch.

Technicon

laboratory essential

The "Lab-aid" laboratory filing system comprises a range of versatile equipment which brings new standards of filing efficiency to the pathological laboratory. For a descriptive bulletin, please use the coupon below.

The TECHNICON Company
215 E. 149th St., New York 51, N. Y.

☐ Send me particulars of the new "Lab-aid" paraffin-block file.
☐ Send me complete "Lab-aid" filing system bulletin.

Gardner's FUNDAMENTALS of NEUROLOGY

Stresses the principles of the subject!

From his wide experience as a teacher Dr. Gardner knows very well that principles are of prime importance to the student beginning the study of neurology. His aim in this popular text, therefore, is to explain, to clarify and to simplify—he succeeds admirably in avoiding the tendency to confuse the reader with a mass of unrelated anatomical data and complicated physiological events.

He covers the field with neatness and dispatch and makes his material understandable even to the student who has only a minimum background in biology. Basic neuroanatomy and fundamental physiology are discussed fully but concisely. The relationships of psychology to the higher nerve centers are competently handled.

The results of experimental work on animals are included in numerous instances for comparative purposes, and clinical applications are introduced wherever they may help clarify student understanding.

Science, a weekly journal, is published each Friday by the American Association for the Advancement of Science at The Business Press, Incorporated, N. Queen St. and McGovern Ave., Lancaster, Pa. Founded in 1880, it has been since 1900 the official publication of the AAAS. Editorial and Advertising Offices, 1515 Massachusetts Avenue, N.W., Washington 5, D. C. Telephone, Executive 0000 or 0001. Cable address, SCIMAG, Washington, D. C. Entered as second-class matter at the Post Office at Lancaster, Pa., January 13, 1945, under the Act of March 3, 1879. Acceptance for mailing at the special rate postage provided for in the Act of February 28, 1925, embodied in paragraph 4, Sec. 338, P. L. and R., authorised January 13, 1945.

Articles offered for publication should be sent to the Editor. The AAAS assumes no responsibility for the opinions expressed by contributors. Membership correspondence for the AAAS should be sent to the Administrative Secretary. Annual subscription, $7.50; single copies, $2.50; foreign postage (outside the Pan-American Union), $1.00 extra; Canadian postage, $.50 extra. Remittances and orders for subscription and single copies should be sent to the Circulation Department, AAAS, North Queen Street and McGovern Avenue, Lancaster, Pennsylvania, and 1515 Massachusetts Avenue, N.W., Washington 5, D. C. Claims for missing numbers will not be allowed if received more than 60 days from date of issue. No claims allowed from subscribers in Central Europe, Asia, or the Pacific Islands other than Hawaii or because of failure to notify the Circulation Department of a change of address or because copy is missing from the files.

Change of address. Four weeks notice is required for change of address. This should be sent to Science, 1515 Massachusetts Avenue, N.W., Washington 5, D. C. When ordering a change, please furnish an address stencil label from a recent issue. Address changes can be made only if the old as well as the new address is supplied.

The American Association for the Advancement of Science also publishes The Scientific Monthly. Subscription rates on request.
NOW...A GREAT BOOK GREATLY REDUCED IN PRICE!

Physical Chemistry of Cells and Tissues

By Rudolph Höber, M.D., Univ. of Penna. Medical School, Dept. of Physiology

Now $6 instead of $9. Unprecedented demand has reduced our production cost, permits a lower price to you.

This brilliant collaboration of several distinguished physicians and scientists gives the results of extensive studies in various fields of physical chemistry, in their application to physiology. Here are a few of the many comments the book has won:

Journal of Physical Chemistry: "... most elaborate and successful attempt ever made to treat many of the fundamental problems of general biology from the physicochemical viewpoint."

Quarterly Review of Biology: "... a rich gold mine of facts and references."

Journal of the Amer. Chemical Society: "... of remarkable value and interest... almost indispensable for advanced students and investigators."

Johns Hopkins Hospital Bulletin: "This is an important book."

70 Illustrations, 676 Pages, Price, $6 (reduced from $9)

Limnological Methods

By Paul S. Welch, Ph.D., Prof. of Zoology, University of Michigan

In this new book the biologic, chemical and physical aspects of inland waters receive intensive and expert examination. It is a book of practical, thoroughly up-to-date procedures, providing the necessary data for introduction to the subject, for limnological surveys of lakes and streams, and for specialized research.

97 Illustrations, 381 Pages, Price, $7

Lambert's Introduction and Guide to Histology

By Helen L. Dawson, Ph.D., Assistant Professor of Anatomy and Histology, State Univ. of Iowa

An ideal textbook for students who are interested in a general course in Histology. It is well suited for the liberal arts student and those preparing for entrance into the medical field. In this new 2nd Edition, sections have been included to help the student both in technique and in recognition of prepared slides. Many new illustrations and color figures, nearly all diagrams redrawn.

296 Illustrations, 696 Pages, Price, $6

Embryology of the Pig

By Bradley M. Patten, Ph.D., Professor and Chairman, Dept. of Anatomy, Univ. of Michigan Medical School

In brief, simple form Dr. Patten's well-known book presents the fundamental facts of mammalian development, with the essentials adequately interpreted. Special stress is laid, not on the details of specific conditions existing in the pig, but on the embryological phenomena involved.

168 Illustrations, 327 Pages, Price, $3.50

NOTE: Any of these books may be examined without obligation

STANDARD MODEL

HILGER POLARIMETER

With glass scale reading directly to 0.01° of arc

IN OUR STOCK FOR IMMEDIATE SHIPMENT

POLARIMETER, Hilger Standard Model, for use with monochromatic light. A robust instrument on massive, rigidly aligned support, with Lippich triple field polarizer with adjustable half-shadow angle, and rotatable analyzer with precise Microptic glass scale reading directly to 0.01° of arc and, by estimation, to the third decimal place.

The whole glass circle is enclosed in a dustproof housing and is supplied with a built-in low voltage lamp for illuminating the scales and graticules. Takes tubes up to 400 mm long, and is complete with I.S.S. sugar scale, in addition to the usual scale in angular degrees, to permit use as an accurate saccharimeter.

Coarse adjustment of the glass circle is by means of a metal wheel with sprocket-like periphery, mounted behind the circle housing; fine adjustment is accomplished by a protected tangent screw and a screw clamp at right-hand side of housing. The half-shadow angle adjustment of the polarizing prisms, which provides variation in sensitivity, is by means of a lever, set-screw, and arc engraved in degrees. Increasing the angle increases the amount of available light, as may be required for slightly turbid solutions, with but slight loss in sensitivity. The eyepiece for matching the fields is in a sliding focusing mount in the center of the circle. The eyepiece for viewing the scales is in a spiral focusing mount to the left. The glass circle is engraved in 1° of arc, also from +150°S to -150°S in 1° divisions. Two fixed graticule scales, one with 100 divisions, the other with 20 divisions, ranging from -1.0°S to +1.0°S in 0.1°S.

SUPERIMPOSE EXACTLY THE DISTANCE BETWEEN TWO SUCCESSIVE DEGREE MARKS ON THE ANGULAR DEGREE SCALE AND SUGAR SCALE, RESPECTIVELY, TO READ DECIMAL DIVISIONS OF A DEGREE. ESTIMATIONS TO 0.1°S CAN BE MADE WITHOUT DIFFICULTY.

ILLUMINATION OF THE SCALES IS PROVIDED BY A READILY REPLACEABLE 4 VOLT, 2 WATT BULB WITH MINIATURE SCREW BASE, AND A TRANSFORMER WITH VARIABLE RESISTANCE FOR ADJUSTING INTENSITY OF THE LIGHT. COLORED FILTERS ARE SUPPLIED IN BOTH EYEPICES SO THAT THE MATCHING AND READING FIELDS ARE GENERALLY SIMILAR IN COLOR WHEN USING SODIUM LIGHT. THE FILTER IN THE POLARIZER IS MADE OF DYED GELATINE AND IS THE COLOR OF THE STANDARD POTASSIUM BICHROMATE SOLUTION. BOTH FILTERS ARE READILY REMOVABLE WHEN SOURCES OTHER THAN SODIUM LIGHT ARE USED.

8347-A. Polarimeter, Hilger Standard Model, as above described, reading directly to 0.01° of arc, with glass scales for degree of arc and sugar (I.S.S.); for tubes up to 400 mm long. With color filters, one polariscope tube, 200 mm and transformer with connecting cords and plugs for attachment to 110, 200 to 230, or 230 to 250 volts, a.c. With directions for use but without sodium lamp ...... 1,940.00

Why wooden cages instead of steel?

Steel would be more durable, but our careful checking over the years proves that laboratory animals breed better, maintain better health in wooden cages.

These cages are hung from the ceiling—do not touch the floor—to minimize insect infestation. This is another example of the care that produces dependable uniformity in the CP strains of mice, rats, and guinea pigs, and explains why they are the choice of so many leading research laboratories.

Your inquiries are invited.
HISTOPATHOLOGY OF IRRADIATION FROM EXTERNAL AND INTERNAL SOURCES

This is the first volume from the Plutonium Project Record (Division IV) describing the histopathological and cytological effects of total-body irradiation by a wide range of radioactive agents. It compares the histological changes that result from various types of radiation originating externally and internally. It also gives aids in establishing "tolerance levels" to various amounts of radiation. The book covers a wide variety of experiments and gives detailed information relative to techniques and materials.

ELEMENTARY PHOTOGRAPHY. New 2nd edition

By Guilford G. Quarles, The Pennsylvania State College. 345 pages, $4.50

As before, this well known text provides a treatment of photography between the very elementary ones and those of an advanced technical nature. Thus the book assumes no previous knowledge of the subject, and care has been taken to make the new edition even more easily understandable to the student and more teachable from the point of view of the instructor. All material has been brought abreast with present-day developments.

FOREST PATHOLOGY. New 2nd edition

By John S. Boyce, Yale University. 526 pages, $6.00

This successful book has been thoroughly revised. Much of it has been entirely rewritten to include a wealth of information on such topics as salt spray injury, Phymatotrichum root rot, phloem necrosis of elm, Adelopus needle cast of Douglas fir, septoria canker of poplars, canker stain of planetree, oak wilt, persimmon wilt, and several other rots. New material has been added on the prevention and control of the deterioration of wood in service.

HISTORICAL GEOLOGY. New 2nd edition

By Russell G. Hussey, University of Michigan. 465 pages, $3.75

Gives the geological history of North America and its inhabitants throughout two billion years of time. The book presents the outstanding events in the geologic history of North America, emphasizing the development of life during various geologic periods. It covers the principles of evolution, and elaborates upon them as each group of vertebrates is introduced. This second edition has been simplified and contains an abundance of carefully chosen illustrations.

You feel the difference . . . You see the difference . . . from the first moment you begin to focus a new Bausch & Lomb BAV Laboratory Microscope.

You obtain proper adjustment faster, more accurately, with less effort . . . superlative performance resulting from advanced mechanical features such as the variable focus condenser, threadless cell lens mounts, nosepiece with roller bearing stop, coarse adjustment with matched rack and pinion, and patented lever fine adjustment.

Most important of all, you see better. Images of unmatched clarity and sharpness are provided by the world's finest optical system.

Before you buy a new laboratory microscope be sure to see the Bausch & Lomb BAV.
