FOR AUTORADIOGRAPHY—
A good medium to standardize on

KODAK NUCLEAR TRACK PLATES, TYPE NTB, 10 MICRON

OVER THE PAST YEAR, Kodak photographic scientists have been co-operating closely with scientists engaged in autoradiographic research. The result has been to emphasize the advantage of exploring fully the use of Kodak Nuclear Track Plates, Type NTB, 10 Micron.

NTB plates have high sensitivity to beta particles in relation to background density. The thinness of the 10μ emulsion makes for good resolution. And the NTB emulsion has wide latitude in development to select the level of sensitivity desired.

Full information about these plates and where to buy them will be sent upon request. Eastman Kodak Co., Rochester 4, N. Y.

NUCLEAR PARTICLE RECORDING
...another important function of photography

"Kodak" is a trade-mark
LIMNOLOGICAL ASPECTS OF
WATER SUPPLY AND WASTE DISPOSAL

This volume of 20 papers treats of a field of science of rapidly increasing importance. In it engineering and limnology meet, and government plays an important role.

The papers in this new volume are not simply academic discussions of possibilities, but of sound biological and engineering science as applied to current practice in northern Wisconsin and Minnesota. The 12 contributors to this volume are largely from that area, but several are connected with institutions from Ohio to Boston.

PRICES FOR THIS BOOK IN CAR-
TONS, postage prepaid, are as follows:
Members of the A.A.A.S. ....... $2.75
Nonmembers and Institutions .... 3.25

ORGANIC REACTIONS—VOLUME V
Edited by Roger Adams, University of Illinois

Presents a thorough discussion from the preparative viewpoint of 10 important organic reactions. This approach makes it easy for the reader to find the laboratory procedure involved, as well as the problems he is likely to encounter. Interfering influences, effects of structure, and selection of experimental techniques are treated.

September 1949  In press  Probable price, $6.00

HIGHER ALGEBRA FOR THE UNDERGRADUATE
By Marie J. Weiss, Newcomb College, Tulane University

Designed for a six-hour course for the undergraduate who has had two years of college mathematics including calculus. Begins with a discussion of the number system and proceeds to more advanced topics such as the properties of polynomials over a field and the theory of determinants.

June 1949  165 pages  $3.75

BORON TRIFLUORIDE AND ITS DERIVATIVES
By Harold S. Booth, Western Reserve University, and Donald R. Martin, University of Illinois

This book facilitates investigations made with boron trifluoride by providing a complete and organized presentation of the subject, its applications, and complexes. An extensive bibliography includes references to many recent articles on boron trifluoride when used as a catalyst.

August 1949  Approx. 296 pages  Illus.  Probable price, $5.00

FERTILITY AND HATCHABILITY OF CHICKEN AND TURKEY EGGS
Edited by Lewis W. Taylor, University of California, Berkeley

A thorough coverage of all phases of scientific work pertinent to the field of fertility and hatchability, with emphasis on actual poultry and hatchery operation. Includes information from the fields of nutrition, physiology, biochemistry, biophysics, genetics, and pathology—each chapter written by a specialist in that particular field.

August 1949  Approx. 406 pages  Illus.  Probable price, $5.00

JOHN WILEY & SONS, Inc., 440 Fourth Avenue, New York 16, N. Y.
20 of the Symposium Volumes published by the A.A.A.S. have been exhausted. Some unbound copies are available, e.g., The Gonococcus and Gonococcal Infection, 32 papers, 171 pages, $1.25. The eight titles remaining in print are shown below with prices: (a) indicates cash prices to members, (b) prices to nonmembers and institutions.

- **HUMAN MALARIA,** 44 papers on history, parasitology, anopheine vectors, epidemiology, symptomatology, pathology and immunity, treatment, control and eradication; reprinted. 406 pp. (a) $4.00, (b) $5.00.

- **LIEBIG and AFTER LIEBIG—A Century of Progress in Agricultural Chemistry,** 10 papers make available in convenient form the history of one of the most significant developments in agricultural science. 119 pp. (a) $2.50, (b) $3.00.

- **AEROBIOLOGY,** 8 papers on extramural aerobiology contain material of interest to botanists, zoologists, agriculturists, and the general public. 29 papers on intramural aerobiology deal with air-borne infections. 299 pp. (a) $3.50, (b) $4.00.

- **RELAPSING FEVER in the AMERICAS,** 20 papers on symptomatology, diagnosis, etiology, epidemiology, pathology and immunity, tick vectors, treatment, and public health aspects. 136 pp. (a) $2.50, (b) $3.00.

- **DENTAL CARIES and FLUORINE,** 11 papers report on investigations in the British Isles, India, South Africa and the U.S.A. 111 pp. (a) $3.00, (b) $3.50.

- **APPROACHES to TUMOR CHEMOTHERAPY,** 41 papers. A progress report, addressed largely to future workers. 412 pp. (a) $6.50, (b) $7.75.

- **RICKETTSIAL DISEASES of MAN,** 27 papers record the control of Rickettsial diseases during World War II and reveal the scientific foundation on which the adopted methods rest. 235 pp. (a) $5.25, (b) $6.25.

- **LIMNOLOGICAL ASPECTS of WATER SUPPLY and WASTE DISPOSAL** (6 x 9), 8 papers sample the border area within the scope of interests common to the engineer, the limnologist, and the oceanographer. 93 pp. (a) $2.75, (b) $3.25.

**A.A.A.S. PUBLICATIONS**

The First Practical Laboratory Manual

RADIOACTIVE TRACER TECHNIQUES

By George K. Schweitzer, Ph.D., Assistant Professor of Chemistry, University of Tennessee and Oak Ridge Institute of Nuclear Studies; and Ira B. Whitney, B.S., Chief Supervisor, Radio Chemical Process Development, Oak Ridge National Laboratory.

Here at last is a truly comprehensive, up-to-date laboratory manual on radioactive tracer techniques. It gives full directions for carrying out twenty-eight representative experiments, covering the basic methods and the application of radioactive tracers to the fields of chemistry, physics and biology. These experiments are organized according to a plan that facilitates their use by students or research workers. For each experiment there is given a statement of the objective sought, a statement of the theory, a list of the apparatus and materials required, a detailed series of instructions covering the procedure to be followed, and the methods of calculating results. The radioisotopes required for the experiments are readily available and quite inexpensive, and the number has been held to a minimum.

"Radioactive Tracer Techniques" provides a wealth of practical information on the operation and construction of a radiolaboratory and on the especially important subject of radioactive hazards and working in a radiolaboratory. It covers the steps to be taken and the precautions to be observed from the time a person enters until he has completed his work and left the laboratory.

In every detail this book has been planned to serve both as a source of laboratory methods for research workers in industry, agriculture, engineering, medicine and related sciences, and as a laboratory manual for courses in radioactive tracer methods. It contains the general information necessary to give the reader a broad insight into the problems that may be solved in order to expand the range of usefulness of radioisotopes in all phases of present-day research.

A comprehensive index lists the radioisotopes of tracer interest, the fundamental constants, the basic apparatus, the suppliers from which it may be obtained and other factors necessary to round out this practical manual on the use of radioactive tracers. In short, this book has been planned to meet the widest possible range of requirements in teaching as well as in industry.
This new, third edition brings up to date the chemically fascinating story of these naturally occurring compounds which have such an important bearing on human physiology—such, for example, as morphine, the sterols, hormones, and the steroid group of alkaloids. This volume continues and expands the brilliantly constructive work with which the authors have been associated for many years. It will be of the greatest interest to drug and pharmaceutical chemists, physicians, and organic chemists working in these and related fields.

SOIL TESTERS
by Hellige and Truog

FOR SOIL REACTION
Phosphorus * Potassium * Calcium * Magnesium * Nitrate Ammonia * Sulphate * Chloride

Hellige-Truog Testers have gained universal acclaim because they are based on sound scientific methods and are highly accurate. They have won the sponsorship of the foremost authorities on soil chemistry and thousands of testers are used by U.S. Government Agencies, as well as by professional and amateur gardeners.

Personnel Placement

CHARGES and REQUIREMENTS for "PERSONNEL PLACEMENT" Ads

1. Rate: 15¢ per word, minimum charge $3.00 for each insertion. If desired, a "Box Number" will be supplied, so that replies can be directed to SCIENCE for immediate forwarding. Such service counts as 6 words (e.g., a 25-word insertion plus a "Box Number" equals 33 words). All ads will be set in regular, uniform style, without display; the first word, only, in bold face type.

For display ads, using type larger or of a different style than the uniform settings, enclosed with separate border rules, the rate is $15.00 per inch; no extra charge for "Box Number.

2. Advance Payment: All Personnel Placement ads, classified or display, must be accompanied by correct remittance, made payable to SCIENCE. Insertion can not be made until payment is received.

3. Closing Date: Advertisements must be received by SCIENCE, 1515 Mass. Ave., N.W., Washington 5, D. C., together with advance remittance, positively not later than 14 days preceding date of publication (Friday of each week).

POSITIONS WANTED

Anatomist, Zoologist, Ph.D., age 35. Teaching experience in all anatomical subjects. Desires position with opportunity for research. Box 229, SCIENCE.

Bacteriologist: M.A. in August, man, 25. Desires industrial or teaching position. Available in September. Box 225, SCIENCE.

Bacteriologist: Ph.D.; four years, teaching experience, university medical school; five years, director, division bacteriology, 400-bed hospital; for further information, please write Burneice Larson, Medical Bureau, Palmolive Building, Chicago.

Botanist: Man, Ph.D. Fifteen years successful experience teaching and directing research in large University. Major training and experience in morphology and taxonomy. Familiar with genetics, plant physiology and pathology. Desire position as Department Head or teaching and research. Box 232, SCIENCE.

Clinical Biochemist: M.D., male, 30; trained in internal medicine and biochemistry; active research in human biochemistry and metabolism (particularly electrolytes). Can supervise clinical or research laboratory of medical school hospital; teach metabolism, biochemistry, internal medicine; develop research program. Box 227, SCIENCE.

Zoologist: Single woman receiving Ph.D. August 1949 Univ. of Mich. Wishes teaching position in College. Special interests are Biogeology, Mammalogy, Wildlife Management, Physiology. Box 228, SCIENCE.

Zoologist: 45 term hours graduate work. Teaching experience: eight years, last three Junior College. Desires college or university teaching position. Box 231, SCIENCE.

AVOID DELAY . . . . Cash IN ADVANCE

MUST be enclosed with ALL classified ads.

See "Charges and Requirements"

POSITIONS OPEN

Indian Association for the Cultivation of Science

Calcutta 12, India.

APPLICATIONS are invited for the post of PROFESSOR OF ORGANIC CHEMISTRY in the grade Rs. 800-40,000; 1000-50,1250. Applicants should be distinguished scientists having a long experience of research—especially of work in high polymers—and should be qualified to organise and promote research and guide students. Some copies of applications together with testimonials, statement of qualifications and age, and copies of original publications, should reach the Registrar on or before July 15, 1949. For candidates applying from overseas, abstracts of applications may be sent in advance by Air Mail on or before August 15, 1949.

The Market Place

CHARGES and REQUIREMENTS for "MARKET PLACE" Ads

1. Rate: 20¢ per word for classified ads, minimum charge $5.00 for each insertion. Such ads are set in uniform style, without display; the first word, only, in bold face type.

For display ads, using type larger or of a different style than the uniform classified settings, and entirely enclosed with separate rules, rates are as follows:

- Single insertion $16.00 per inch
- 7 times in 1 year $14.50 per inch
- 13 times in 1 year $12.00 per inch
- 26 times in 1 year $11.50 per inch
- 52 times in 1 year $10.00 per inch

2. Payment: For all classified ads, payment in advance is required, before insertion can be made. Such advance remittances should be made payable to SCIENCE, and forwarded with advertising "copy" instructions. For display advertisers, monthly invoice will be sent on a charge account basis—providing satisfactory credit is established.

3. Closing Date: Classified advertisements must be received by SCIENCE, 1515 Massachusetts Avenue, N.W., Washington 5, D. C., together with advance remittance, positively not later than 14 days preceding date of publication (Friday of each week).

For proof service on display ads complete "copy" instructions must reach the publication offices of SCIENCE, 1515 Massachusetts Avenue, N.W., Washington 5, D. C., not later than 4 weeks preceding date of publication.

APPROACHES TO TUMOR CHEMOTHERAPY

This volume of 41 papers by leading authorities is a comprehensive summary of the progress so far made toward the chemotherapy of malignant tumors.

The plans for the volume were developed under the auspices of the National Cancer Institute and such other centers of cancer research as the Memorial Hospital of New York, the Sloan-Kettering Institute for Cancer Research, and the Lankenau Institute of Philadelphia.

Among the 93 contributors to the book are J. Engelbreth-Holm, M.D., University of Copenhagen, Denmark, and Alexander Haddow, M.D., D.Sc., University of London and the Royal Cancer Institute of London, England. Members of the staffs of all the principal cancer research institutions in the United States contributed to this volume.

APPROACHES TO TUMOR CHEMOTHERAPY was not only a deliberately planned program but the contributions were presented and discussed leisurely at two 5-day research conferences at Gibson Island, Maryland. After these presentations and discussions of the manuscripts they were reviewed and edited by both the Chairman of the Publications Committee and the Editor of the volume, and all the numerous references to the cancer literature throughout the world were carefully checked. However rapid the much hoped-for progress in the cancer problem may be, this volume promises to be an important and trustworthy reference book.

St. Louis, Mo.
Health protection from excessive radiation exposure is a requirement in all laboratories using radioactive materials or x-rays. Tracerlab manufactures all of the necessary equipment for a complete health safety program.

THE SU-1A RADIATION SURVEY METER is especially useful for measuring radiation from radioisotope shipments, experimental setups, and x-ray machines to indicate when permissible radiation dosage rate is exceeded.

TRACERLAB FILM BADGE SERVICE for radioactivity laboratories and hospital x-ray installations provides a complete record of radiation received by each worker.

LEAD BRICKS AND BOXES are needed for shielding gamma emitting radioisotopes to prevent excessive radiation exposure to laboratory workers.

REMOTE HANDLING EQUIPMENT provides the protection afforded by distance when carrying or pipetting radioactive materials.

SPENCER
No. 33

PROVEN OPTICAL QUALITY. For
more than 100 years, Spencer optics have
won continued praise from microscopists
the world over—for excellent resolution
and crisp, color-free images.

ACCURATE, LONG WEARING
FINE ADJUSTMENT. Micrometer
eye piece cross adjustment has
accurately threads engaged at all times.
The fine adjustment is the most
important mechanical feature in a
microscope.

DUAL-CONE NOSPEICE. With
two dozen the usual bearing surface—
stays in correct alignment even
after years of use.

DOVETAIL SLIDeways. Two different metals,
end lapped for accuracy, grooved to retain lu-
bricant, give extra smooth operation and long
life. They maintain rigid alignment of eyepiece
and objective with condenser.

PLAIN STAGE. Resistant to all common reagents, is
made of solid durable bakelite. Will not warp or fade.

FORK-TYPE SUBSTAGE. An exclusive Spencer feature,
permits easy removal of condenser for cleaning or inter-
change with darkfield unit. Spring plungers in fork
mount accurately position condenser in optical path.

SINGLE UNIT ABBE CONDENSER. Time tested and
time proven—easy to focus correctly and easy to keep
clean. Lens elements always in correct relationship to
one another and in permanent optical alignment.

STURDY CONSTRUCTION. The stand is designed for
rigidity and for laboratory wear.

Here are eight reasons why
so many microscopists have
selected and use the Spencer
No. 33 ... why it should be
YOUR choice too.

This high quality laboratory instru-
ment is available for immediate delivery
with the optics of your choice. See
your local distributor or write Dept.
T-2.
