GEOLOGY. Principles and Processes. New 3rd edition
By W. H. EMMONS; GEORGE A. THIEL, University of Minnesota; CLINTON R. STAUFFER, California Institute of Technology, formerly of University of Minnesota; and IRA S. ALLISON, Oregon State College. 502 pages, $4.50
Here is a revision of a successful text for college students. Some minor changes in arrangement have been made and new material added. In simple but technical style, the authors present the fundamental concepts of physical geology and give the student a scientific view of the processes that operate on and in the earth. There is new emphasis on the interpretation of landscape and geologic structure as seen from the air, with many new aerial photographs.

ELEMENTS OF GEOGRAPHY. Physical and Cultural. New 3rd edition
As before, the authors treat physical geography as an analysis of the resource base for nations and peoples. This stressing of forms rather than processes gives the student a better concept of physical geography as the science which deals with the potentialities of the physical earth for human use. The book has been carefully revised in the light of recent developments. Part I, Physical Elements of Geography will be available in a separately published volume.

ESSENTIALS OF GEOGRAPHY
Describes the principal physical aspects of the earth as a planet, and the varied environments which provide for the habitat of man. Different human economies and their relationships to the principal natural environments comprise a large portion of the book. In addition, the cultural aspects of some phases of human existence have been included, such as political geographical settlements, urban life, etc.

PLANT AND SOIL WATER RELATIONSHIPS
Gives an integrated discussion of the various factors which affect the absorption of water by plants. These factors include the availability of soil moisture, the development of efficient root systems, the nature of the absorption process, the relation between the absorption of water and the absorption of minerals, and the relation between water absorption and other plant processes. The fundamental scientific principles are explained as simply as possible, and many applications of these principles are described.

AN INTRODUCTION TO VERTEBRATE EMBRYOLOGY. New second edition
This is a revision of a college text which is noted for its sound and somewhat rigorous treatment of the development of selected vertebrates. The treatment assumes that the chick and pig embryos are the principal forms studied in the laboratory, but the treatment is not limited to these forms. Some work on the embryology of Amphioxus and the frog is included without curtailing the work on the embryology of the mammal.

ADVANCES IN PHARMACOLOGY SERIES II

FOR HIGH BIOLOGIC VALUE IRON THERAPY FERRO-C
(Ferrous Ascorbate)

Intravenously Ferro-C appears to be as effective in doses of 10 mg as is 32 mg iron ammonium citrate. In addition Daily doses produced prolonged and increased ascorbic acid levels.

PIJOAN, states “ferrous ascorbate was non toxic when administered intravenously”.

FRIEND, calculated that orally 600 mg of iron as iron ascorbate is as effective as is 1000 mg or reduced iron or 4000 to 6000 mg of iron as iron ammonium citrate.

HEILMEYER, recommends iron ascorbate as the best tolerated iron.

Ferrous Ascorbate Available

COOPERATIVE EXTENSION WORK
by Lincoln D. Kelsey
(Professor in Extension Service, Cornell University)
and Cannon C. Hearne
(in charge of Personnel Training Section, Division of Field Studies and Training, Extension Service, U. S. Dept. of Agriculture.)

COOPERATIVE EXTENSION WORK deals specifically with the history and organization of the Extension Service and describes the working procedures by means of which an extension program succeeds. The book shows how typical successful programs in various states have been developed, and it evaluates the tools of the extension worker—press, radio, letters, publications, photography and visual aids, group methods, conferences and personal contacts. Throughout the book the teaching function of extension work is emphasized and every activity is regarded in terms of its educational value.

Men and women preparing for extension work, those already in the Service, leaders in related agencies and organizations, and foreign workers interested in our extension program will find it of the utmost help.

CONTENTS
What Cooperative Extension Work Is.
How the Extension System Works.
The Extension Program.
Extension Methods.
How Extension Work Applies to Other Countries.
Appendix. Index. 432 pages, 48 illus. $4.00

GENERAL ELECTRIC people say—

SAUL DUSHMAN
Retired Assistant Director, Research Laboratory

The Vacuum: Although the vacuum was little more than a scientific curiosity for ages, during the past two decades the art of producing and maintaining high vacuums has become an industrial process of great importance. To realize this, you need only consider the radio industry; it depends for its very existence on the use of vacuum processes in turning out the extremely diversified range of electron tubes—from the little ones used in your radio receiving set to the mighty 100-kilowatt tubes used by the large broadcasting stations. All of these must be evacuated to the highest degree obtainable.

G.E. Monogram, July-August, 1949

R. C. SOGGE
Manager, Standards Division

Standards: The terms "standards" and "standardization" have broad meanings and have a general application, so that we come in contact with some form of standards almost daily in our personal activities as well as our business. One place where we frequently hear of standardization is in connection with mass production. The production of goods in large quantities makes it important that the products and parts be readily interchangeable. Experience has shown that one of the most effective ways of bringing this about is through standardization.

In general, standards are good because they aid in the simplification of manufacture, conserve material and labor, help to attain lowest cost, increase output per unit of floor space, shorten production time, reduce inventory. Standards also promote a clearer understanding between buyers and sellers, and a whole group of standards promotes safety to employees of manufacturing companies and to the public. Practically all standards contribute in one way or another to a lower cost of doing business. I think we might say that we pay for standards whether we use them or not, because we forego savings when we fail to use them.

I. F. KINNARD
Manager of Engineering, Meter & Instrument Divisions

Current Transformers: During more than 50 years of continuous manufacture, it has been almost universal practice to insulate dry-type instrument transformers by wrapping a fibrous material—commonly varnished cambric or crepe paper—around the transformer coils and then impregnating this matrix with asphalt or a similar insulating compound. In many designs as much as one-quarter mile of crepe paper has been wrapped on the coils for proper insulation. Because of the complex configuration of the coils, most of this wrapping has been done by hand. It has, therefore, long been the goal of instrument-transformer engineers to develop a method of molding or casting an insulating material around the transformer core and coils, thus eliminating the necessity for hand wrapping.

After considerable experimentation such a method, as well as a material suitable for use with the method, has been developed through the joint efforts of several divisions within the General Electric Company. The result is... a transformer of unit construction, with all the component parts firmly molded together in a continuous casing of butyl... Its performance characteristics represent a distinct improvement over older designs of transformers and are due in large measure to the excellent properties of butyl and to the new concept of molded transformer insulation.

Personnel Placement

CHARGES and REQUIREMENTS for "PERSONNEL PLACEMENT" Ads

1. Rate: $2.50 per word, minimum charge $3.00 for each insertion. If desired, a "Box Number" will be supplied, so that replies can be directed to SCIENCE for immediate forwarding. Such service counts as 8 words (e.g., a 25-word ad, plus a "Box Number", equals 33 words). All ads will be set in regular, uniform style, without display; the first word, only, in bold face type.

For display ads, using type larger or of a different style than the uniform settings, enclosed with separate border rules, the rate is $15.00 per inch; no extra charge for "Box Numbers".

2. Advance Payment: All Personnel Placement ads, classified or display, must be accompanied by correct remittance, made payable to SCIENCE. Insertion can not be made until payment is received.

3. Closing Date: Advertisements must be received by SCIENCE, 1515 Mass. Ave., N.W., Washington 5, D. C., together with advance remittance, positively not later than 14 days preceding date of publication (Friday of each week).

POSITIONS WANTED

Toxicologist: B.S., Chemistry; graduate training, toxicology and physiology; year's fellowship industrial hygiene; twelve years, director, industrial hygiene activities and toxicological research in industry; for further information, please write Burnice Larson, Medical Bureau, Palmolive Building, Chicago.

Biochemist: Ph.D., capable of independent work. Wanted by pharmaceutical firm. Good background in basic medical science required. Experience in enzymology desirable. Submit complete personal and professional data. Box 281, SCIENCE. 8/12

Endocrinologist: (Ph.D.), wanted by eastern drug firm for research in the biochemistry and physiology of hormones. Must have broad background of experience and interests. Give complete personal, educational and experience resume. Box 280, SCIENCE. 8/12

Positions Open:

(a) Pharmacologist (M.D. preferred, Ph.D. eligible) and anthropologist; appointments of administrative character; $7500-$10,000, East. (b) Bacteriologist: Ph.D., experience in production of toxins and toxins desirable; biological laboratories; Middle West. (c) Associate professor in bacteriology; considerable responsibility; Middle Western college. (d) Zoologist; Ph.D. with training in rodent genetics to join staff of cancer research colony being established as part of cancer research program; rank: associate professor. (e) Clinical pathologist and neurophysiologist; university appointment, West. (f) Solic health engineers, and specialists in fields of malaria and insect control; positions of considerable responsibility; South America. S7-5 Burnice Larson, Medical Bureau, Palmolive Building, Chicago.

Zoologist: preferably physiologist, to teach semester courses in general physiology, human physiology, genetics in New England coeducational liberal arts college. Box 279, SCIENCE.

Stratigrapher and Geophysicist desired by mid-western school. Expanding Department. Ph.D. required in specialty. Rank and salary open. Box 258, SCIENCE. R7/15-29: 8/12-26

Medical Bacteriologist: M.D. degree, satisfactory internship, two years' graduate experience in general pathology and medical bacteriology, or satisfactory equivalent of the foregoing. Duties include research in production of antistreptococcus grouping and typing sera and in mechanisms of active immunity to streptococcal infections. Beginning salary $4242. Annual increment $180 up to $3232. Apply Associate Director, Division of Laboratories and Research, State Department of Health, Albany 1, New York. 7/29

Psychologist: Young man, Ph.D., with competency in teaching and research in abnormal and clinical psychology wanted for full term. Salary and rank commensurate with qualifications. Write Chairman, Psychology Department, Box 2, Emory University, Emory, Ga.

de Fonbrune micromanipulator

offers greater simplicity and flexibility in micro-studies

Now manufactured in America under exclusive rights to the de Fonbrune French patents, this new Aloe Pneumatic Micromanipulator brings to micro-biological and micro-chemical analyses a simplicity of operation and a flexibility of application not possible with any other equipment. The receiver permits use of a variety of micro-instruments under low power wide field, dry or oil immersion objectives. It also permits experimentation on cells by electric current.

With a single control lever, needles, scalpels and other micro instruments are manipulated within a maximum range of three millimeters in all three planes. This simplified operation permits more rapid, accurate investigations... eliminates blind fumbling and multiple adjustments.

58090—Micromanipulator, de Fonbrune, Pneumatic type, with manipulator, receiver, six tubular micro-needle holders, two micro-instrument clamping devices, rubber connecting tubes, and sturdy wood case.

Only an ACCURATE Blood Count is Worth Taking

To aid in correct diagnosis and proper treatment of patients, a blood count must be accurate. That is why most technicians follow accepted techniques with utmost care... why they use only the finest equipment... why the majority choose the famous Spencer "Bright-Line" Haemacytometer.

Only BRIGHT-LINE Chambers offer these 6 Safeguards to Accuracy

GREATER CONTRAST BETWEEN CELLS AND BACKGROUND
Cells appear dark, lines bright, background gray. Each cell is easily counted—even those which overlap lines.

MORE EVEN DISTRIBUTION OF CELLS
Surface tension differences between metalized surface of chamber and glass surface of cover cause cells to distribute more evenly and chamber to fill more readily.

SIMULTANEOUS RESOLUTION OF BLOOD CELLS AND RULINGS
It is not necessary to stop down the condenser of your microscope since blood cells and rulings can be clearly resolved at full diaphragm opening.

METALIZED BACKGROUND ELIMINATES GLARE
Absence of glare provides clearer vision and reduces eyestrain.

INDENTATION OF UNDERSIDE PROLONGS USEFUL LIFE
Introduction of a slight concavity directly under rulings prevents scratches appearing on lower surface of chamber. Such scratches impair counting accuracy.

PRODUCTION TOLERANCES ARE HELD TO THOSE RECOMMENDED AND SET FORTH BY THE U. S. BUREAU OF STANDARDS
