# LANDSCAPE—
**As Developed by the Processes of Normal Erosion**

**Second Edition**

By C. A. Cotton. A geomorphological study of landforms in moist climates, this new book covers logically and concisely all landforms for which “normal” erosion is responsible. Abundant illustrations accompany every phase of the discussion. Among the subjects covered are rain and rivers; the cycle of erosion; homoclinal features and structural benches; lateral corrosion and meandering rivers; peneplains; effects of uplift and warping; and positive and negative movements of base-level.

2nd Edition, June 1949 509 pages 375 illus. $10.00

---

# HIGHER ALGEBRA for the UNDERGRADUATE

By Marie J. Weiss. An introduction to some of the simpler algebraic concepts, this book treats such topics as groups, rings, fields, ideals, and matrices equally with the theory of equations. After introducing the number system and the elementary theory of numbers, the author presents elementary properties of polynomials over a field, matrices over a field, and simultaneous linear equations. The book concludes with a chapter on further properties of groups, rings, and ideals.

June 1949 165 pages $3.75

---

# PRINCIPLES and PRACTICE in ORGANIC CHEMISTRY

By Howard J. Lucas and David Pressman. Accuracy, timeliness, and thoroughness characterize this laboratory manual in organic chemistry. With its detailed notes, precautions, discussion of methods, and application of principles, it emphasizes the physico-chemical approach to laboratory practice. It is valuable too for reference purposes because of the many tables of important data and thorough discussion of a variety of topics, such as methods of purification and numerous methods of preparing organic compounds.

September 1949 557 pages Illus. Prob. price $5.00

---

# DIFFERENTIAL EQUATIONS

**Second Edition**

By Harry W. Reddick. This new edition deals with methods of solving ordinary differential equations and problems in applied mathematics involving ordinary differential equations. New in the second edition is a chapter on the linear equation of second order; additional material on hyperbolic functions, systems of curves, and vibratory motion; amplification of the treatment of the motion of a weight attached to a spring; a discussion of the range of the parameter; and new figures and problems.

2nd Edition, June 1949 288 pages Illus. $3.00
MACBETH pH Meters

Simple, fast, accurate pH determinations

The operation of Macbeth line-operated pH Meters is simplicity itself—the single operating control and direct reading dial make pH determinations quick, easy, accurate. Meter may be left on indefinitely, always ready for use. Continuous indicating feature of advantage where a constant pH check, such as in flow lines, is necessary. There are Macbeth pH Meters for every use.

We are also manufacturers of the foremost line of scientifically accurate lamps for color matching.

FUNDAMENTALS OF PHYSICAL SCIENCE. An Introduction to the Physical Sciences

By Konrad Bates Krauskopp, Stanford University. Second edition. 676 pages, $4.50

Presents the sciences of physics, astronomy and geology for the beginning student as a unified field of knowledge. The achievements of modern science and important discoveries of the past are discussed with special emphasis on basic principles and on methods of scientific reasoning. The book presents not only the chief facts and accomplishments of modern physical science, but seeks to give the liberal arts student sufficient first-hand acquaintance with the scientific method so that he may appreciate its power, usefulness and its limitations.

INTRODUCTION TO ATOMIC PHYSICS

By Otto Oldenberg, Harvard University. 373 pages, $5.00

Intended for students who have taken a course in general physics, this text presents the subject in a manner in which the emphasis is on understanding, rather than accepting statements on authority. The relation of all theoretical statements to observed facts is fully discussed.

ANIMAL BIOLOGY

Consistently stressing principles and broad points of view and minimizing details, this book aims to give the beginning student a clear, comprehensive understanding of the whole field of zoology. At the same time, the text is representative of the so-called “types” course. Origins of the group names are given and pronunciation of words is included in the glossary.

MECHANICS—STATICS AND DYNAMICS

By Merit Scott, The Pennsylvania State College. 394 pages, $4.50

Here is an intermediate textbook for junior-senior courses designed to bridge the gap between the first college course and graduate study. The subject is analytically and logically developed and includes both the long form of notation and the vector notation, with simple vector operations. The text has been written with the intent that the student shall work out the development of the subject for himself. There is sufficient material for a two-semester course.

PHYSICAL PRINCIPLES OF OIL PRODUCTION

Formulates and correlates present information concerning the physical principles and facts underlying the mechanics of oil production. The book is designed to stimulate and encourage further research study, clarify many aspects of the subject, and to improve the correlation between laboratory theories and field observations.

CHARGES and REQUIREMENTS for "PERSONNEL PLACEMENT" Ads

1. Rate: 15¢ per word, minimum charge $3.00 for each insertion. If desired, a "Box Number" will be supplied, so that replies can be directed to SCIENCE for immediate forwarding. Such service counts as 8 words (e.g., a 25-word ad, plus a "Box Number", equals 33 words). All ads will be set in regular, uniform style, without display; the first word, only, in bold face type. For display ads, using type larger or of a different style than the uniform settings, enclosed with separate border rules, the rate is $15.00 per inch; no extra charge for "Box Numbers".

2. Advance Payment: All Personnel Placement ads, classified or display, must be accompanied by correct remittance, made payable to SCIENCE. Insertion cannot be made until payment is received.

3. Closing Date: Advertisements must be received by SCIENCE, 1515 Mass. Ave., N.W., Washington 5, D. C., together with advance remittance, positively not later than 14 days preceding date of publication (Friday of every week).

POSITIONS WANTED

Cellular Physiologist, Ph.D.: Seeks position, teaching or research. Comprehensive experience. Active research. Box 310, SCIENCE. X

Editorial: 4½ years, scientific publications; English major, University Michigan; chemistry, social studies, languages. PBK. Box 309, SCIENCE. X

Editorial assistant: library research, copy-editing, indexing, abstracting, proofreading; B.A.; scientific, medical background; secretarial and administrative experience. N. Y. - N. J. area. Box 314, SCIENCE. X

Physiologist: Ph.D. 1948. Age 31. Wants appointment in active research laboratory as assistant to Chiel. 2 years histo-physiology experience, 4 years clinical pathology experience, 2 years endo- crineenzyme experience. Box 313, SCIENCE. X

Physiologist: Ph.D. one year teaching experience. Want university appointment leaving at least half-time for research Study still holding out for right job beginning Fall 1949. Box 315, SCIENCE. X

Ph.D., Cytology: experienced in teaching and research; research: animal behavior, plant physiology; for further information, please write Burneice Larson, Medical Bureau, Palmolive Building, Chicago. X

Plant Physiologist: biochemist. Recent Ph.D. Background in horticulture. Research experience in enzymes and carbohydrates metabolism. Desires research or teaching position. Box 312, SCIENCE. X

Psychologist: Ph.D. Four years varied teaching experience, research design, industrial, guidance and counseling. Desire teaching position in New York area, or part time consulting. Box 311, SCIENCE. X

RESULTS!

SCIENCE reaches directly foremost scientists in the leading educational institutions, research foundations and industrial laboratories of the Nation—76 foreign countries.

Your advertisement here will be reaching a distinguished—and responsive—audience.

Personnel Placement

POSITIONS OPEN

Positions Open:
(a) Biochemist, Ph.D.; basic research (nothing routine); independent researcher preferred; graduate training or experience in field of enzymes required; large industrial company; Chicago area.
(b) Physiologist; teaching experience in medical school in field of physiology required; Ph.D. or M.D.; rank: instructor or assistant professor; Middle Western university.
(c) Pharmacist; duties consist of developmental work in toxicology and radiation effects on living matter; well known research institution; West.
(d) Research fellow with teaching experience; department of physiology and pharmacology, university medical school; duties relatively light; ample opportunity research; rank, associate professor; nine-month year; $5,000.
(e) Physicist; full-time professorship; Middle Western university.

Research Assistantship in Pharmacology and Toxicology leading to M.S. or Ph.D. $1200 per annum. "B" Average essential. Background in Chemistry, Biochemistry or Physiology helpful. Box 305, SCIENCE. 8/26

Spectroscopist: Excellent opening for an experienced band spectroscopist with good theoretical background to carry out direct fundamental spectroscopic studies relating to combustion processes. Publications encouraged. Salary open. Write: Personnel Administrator, Jet Propulsion Laboratory, California Institute of Technology, 4800 Oak Grove Drive, Pasadena, California, giving details of training, experience, publications, and professional references. 10/7

Stratigrapher and Geophysicist desired by mid-western school. Expanding Department. Ph.D. required in specialty. Rank and salary open. Box 238, SCIENCE. R7/15-29; 8/12-26

APPROACHES TO TUMOR CHEMOTHERAPY

x + 442 pp.—7½ x 10½—illustrated—clothbound—1947

This volume of 41 papers by leading authorities is a comprehensive summary of the progress so far made toward the chemotherapy of malignant tumors.

The plans for the volume were developed under the auspices of the National Cancer Institute and such other centers of cancer research as the Memorial Hospital of New York, the Sloan-Kettering Institute for Cancer Research, and the Lankenau Institute of Philadelphia.

Among the 93 contributors to the book are J. Engblbreth-Holm, M.D., University of Copenhagen, Denmark, and Alexander Haddow, M.D., D.Sc., University of London and the Royal Cancer Institute of London. England. Members of the staffs of all the principal cancer research institutions in the United States contributed to this volume.

APPROACHES TO TUMOR CHEMOTHERAPY was not only a deliberately planned program but the contributions were presented and discussed leisurely at two 5-day research conferences at Gibson Island, Maryland. After these presentations and discussions of the manuscripts they were reviewed and edited by both the Chairman of the Publications Committee and the Editor of the volume, and all the numerous references to the cancer literature throughout the world were carefully checked. However rapid the much hoped-for progress in the cancer problem may be, this volume promises to be an important and trustworthy reference book.
