CONTENTS

The Meaning and Limits of Exact Science:
Max Planck .................................................. 319

Technical Papers
Preparation of Radioautographs of Tissues without Loss of Water-Soluble D32:
Margaret W. Holt, Russell F. Cowing, and Shields Warren .......................... 328

On the Relationship of Blood Group A to Rh Immunization and the Occurrence of Hemolytic Disease of the Newborn:
S. P. Luca, Marjorie L. Hunt, and John C. Talbot ..................................... 329

Strontianite and Witherite Associated with Southern Illinois Fluorite:
O. R. Grage and M. P. Nackowski .................................................. 331

Grignard Coupling at High Temperatures:
Amos Turk, Marvin P. Zimmerman, and Robert Mavis ............................. 332

The Preparation of Formaldehyde-C14:
A. Russell Jones and Walter J. Skraba ............................................ 332

Determination of the Fate of Calcium in the Laying Hen by Means of Radioalum (Ca45): J. W. T. Spinks, M. R. Berlie, and J. B. O'Neill ...................... 332

Serologic Relationships of Mumps and Newcastle Disease: Erwin Jungherr,
Roy E. Lugtenbuhl, and Lawrence Kilham ........................................ 333

Comments and Communications
Method for Isolation of Actinomyces israeli from Dento-Bacterial Plaque; Statement on Visa Action ................................................................. 334

News and Notes .............................................................................. 335
Science 110 (2857), 319-338.
