**PELLECLES, 250μ thick**

... to show longer

**nuclear particle paths**

The thicker a nuclear track emulsion, the better the chance of catching the start and finish of an interesting nuclear event. But a very thickly coated plate is not easy to process evenly. That’s why all the Kodak Nuclear Track emulsions are available in unsupported form as pellicles approximately 250 microns thick.

The newest of the Kodak Nuclear Track emulsions is Experimental Type NTC3, available both as pellicles and on plates. Less sensitive than Type NTA, it is recommended for cyclotron and synchrotron applications where the high intensity of background radiation poses a serious problem. Low halide-to-gelatin ratio in Experimental Type NTC3 emulsion facilitates grain counting for protons below 10 MEV and alpha particles below 100 MEV.

For up-to-date quantitative information on all Kodak Nuclear Track Plates and Pellicles, write Eastman Kodak Company, Industrial Photographic Division, Rochester 4, N. Y.

High vacuum processing in the laboratory or plant necessitates vacuum pumping equipment to get the low pressures required for efficient operation. Stokes Microvac Pumps answer the need for reliable, high vacuum pumping equipment... higher volumetric efficiency, lower power requirements, fool-proof operation assured.

And, Stokes high vacuum McLeod gages provide a quick, convenient, dependable means for accurately measuring vacuum. Your high vacuum problems are welcome at Stokes... may we serve you?

LaMotte Standards for Analysis

TIRON
(disodium-1, 2-dihydroxybenzene-3, 5-disulfonate)

For the Determination of Iron

A new sensitive, stable, and widely applicable reagent, developed by John H. Yoe and A. Letcher Jones, University of Virginia (Reference—Industrial and Engineering Chemistry, Analytical Edition, Vol. 16, p. 111–115, 1944), for the colorimetric determination of ferrous iron. The reagent may be used in either acid or alkaline medium. In alkaline medium it is sensitive to one part of iron in 100,000,000 parts of solution. In acid solution the sensitivity is one part in 30,000,000.

For the Determination of TITANIUM

(Method of Yoe & Armstrong)

TIRON is an extremely sensitive reagent for the determination of TITANIUM (indicated sensitivity, 1 part of TITANIUM in 100,000,000 parts of solution). Only a few ions interfere. Furthermore, TIRON may be used to determine both Titanium and Iron in same solution. TIRON REAGENT available from stock.

For MEASUREMENT of SKIN RESISTANCE

Garcean RECORDING PSYCHOALVANOMETER

For the study of the psychogalvanic reflex and skin resistance. The instrument is direct-reading and gives a written record of the reaction of the patient. Price—$595.00

Garcean CLINICAL DERMOMETER

For clinical and experimental investigation of disorders involving sympathetic reaction, such as pain reflexes. In the psychological laboratory, the instrument has a well-known application as a so-called “lie detector”. Resistance is read directly from a calibrated dial. Small variations, greatly magnified, are shown on the meter. Battery operated. Price . . . . $95.50

ACURATE CONTROL
POSITIVE ACTION
LONG LIFE
. . . from "JAGABI" RHEOSTATS

"Jagabi" Rheostats insure precise current control over a long service life by combining ruggedness of construction with instrument accuracy. Small to large, each rheostat permits the nicety of adjustment necessary for precision control of associated equipment. Positive action and smooth operation are attained through the "Lubri-tact" feature—a unique permanently lubricated sliding contact. A full range of "Jagabi" Rheostats in 4 sizes, with 76 different ratings, and a variety of type are carried in stock. Write for Bulletin 41-SM.

HYDRAULIC EQUIPMENT
341 HUDSON ST. NEW YORK 14, N. Y.
Anatomist: Professor and head, department of anatomy, university medical school, past 12 years; available immediately; for further information, please write Burneice Larson, Medical Bureau, Palmolive Building, Chicago.

Botanist, Ph.D., M.S., zoology, young woman, considerable teaching experience including bacteriology, biology. Box 225, SCIENCE.

Microbiologist, M.Sc., woman, degree minors—chemistry, soil bacteriology, research experience. Box 228, SCIENCE.

Physiologist: Ph.D.; male, single, 29, methodist, 15 publications, June graduate, 3 years as hospital technician, available immediately. Box 226, SCIENCE.

Plant Geneticist, Ph.D. Plant physiology minor. Desires research or teaching position in physiology, genetics, or agronomy. Box 227, SCIENCE.

Zoologist: Experienced college teacher desires change, research opportunity. Several years successful teaching. Ph.D. Former National Research Council Fellow. Research publications in ecology. Interested in teaching, museum, research, or library position. Box 215, SCIENCE.

Positions Open:
(a) Biochemist, Ph.D., clinical laboratory, fairly large voluntary hospital; newly created position; opportunity research, medical school affiliation; $5000–$7000; West. (b) Technically trained young man, must take over control and responsibility of making intravenous solutions, sterilizing and testing them for sterility and absence of pyrogens; must be qualified to set up complete standards laboratory; manufacturing company; East. (c) Young physician qualified biochemistry to become associated with pathologist, Diplomate and FACP, director of laboratories, large general hospital; new laboratory department now being completed; metropolitan area of East. (d) Chairman of department of pharmacology, Ph.D.; assistant in physiology, minimum of M.S. degree, trained in neurophysiology and anatomy; Midwest college. (f) Director of Research, small company, interesting program of expansion; physician with research experience, pharmaceutical industry required; $12,000–$15,000. ST-2 Burneice Larson, Medical Bureau, Palmolive Building, Chicago.

CHARGES and REQUIREMENTS
for "MARKET PLACE" Ads
1. Rate: 20¢ per word for classified ads, minimum charge $5.00 for each insertion. Such ads are set in uniform style, without display; the first word, only, in bold face type. For display ads, using type larger or of a different style than the uniform classified settings, and entirely enclosed with separate rules, rates are as follows:
   - Single insertion $16.00 per inch
   - 7 times in 1 year 14.50 per inch
   - 13 times in 1 year 13.00 per inch
   - 26 times in 1 year 11.50 per inch
   - 52 times in 1 year 10.00 per inch
2. Payment: For all classified ads, payment in advance is required, before insertion can be made. Such advance remittances should be made payable to SCIENCE, and forwarded with advertising “copy” instructions. For display advertisers, monthly invoices will be sent on a charge account basis—providing satisfactory credit is established.
3. Closing Date: Classified advertisements must be received by SCIENCE, 1515 Massachusetts Avenue, N.W., Washington 5, D.C., together with advance remittance, positively not later than 14 days preceding date of publication (Friday of every week).
   For proof service on display ads complete “copy” instructions must reach the publication offices of SCIENCE, 1515 Massachusetts Avenue, N.W., Washington 5, D.C., not later than 4 weeks preceding date of publication.

Brucellosis

This AAAS symposium volume presents in 24 papers a comprehensive view of Brucellosis.

The National Institutes of Health, the U.S. Department of Agriculture, and the National Research Council who co-sponsored the verbal presentation of these treatises, succeeded in obtaining as contributors pioneers in this comparatively new field.

Cash price to AAAS members $3.50
Nonmembers and institutions $4.00

Centennial

7½ x 10½ inches, double column, clothbound, 320 pages

Symposia presented to commemorate the first hundred years of AAAS include 42 papers by leading scientists in thirteen major fields:

Sciences of Society
Educational Potentials
Human Individuality
Food and Nutrition
Housing
World Health Problems

Sources of Energy
The Upper Atmosphere
The World's Natural Resources
Genes and Cytoplasm
High Polymers
Interactions of Matter and Radiation
Waves and Rhythms

Cash price to AAAS members $4.50
Nonmembers and institutions $5.00

Note: Members may use the special prices only for prepaid orders and for one copy of each publication.

FOR routine laboratory fractionation, where the finesse and ultimate-degree precision of the Technicon automatic drop-counting collector exceeds the requirement of the task, this new flow-rate collector is an efficient and economical instrument. Based on a sound rate-of-flow principle, the time-controlled mechanism will automatically collect any number of samples up to 200: any predetermined volume-per-sample up to 25cc.

As each fraction is collected, the carriage automatically advances to repeat identical collections consecutively until the whole fractionation has been made. When speed is essential, a tandem-collector (optional) can be hooked-in to double output. The Technicon Flow-Rate Collector is completely automatic: requires no attention during operation. Set it for the given experiment and go away: it will shut off automatically on completion of the fractionation. Send the coupon below for details.
with the

Spencer Refractometer

Quick, critically accurate determinations of refractive index and dispersion are easily accomplished with Spencer Refractometers. In many industries these determinations are a convenient basis for control of quality. Food, petroleum, chemical, rubber, distilling, pharmaceutical, optical, and many other industries find its use of great value.

One of the six types of Spencer Refractometers may answer a real need in your research or production departments. For additional information write Dept. G2.
