**An interpretation by the originator of the theory—**

**SUPERFLUIDS**

Volume I: Macroscopic Theory of Superconductivity. By Fritz London, Duke University. In this first volume, the author presents an electrodynamical Theory of Superconductivity, first developed by him and his brother in 1935. The basic idea is that the peculiar low temperature transfer mechanisms, as exhibited by superfluid helium and by the superconductors, are pure quantum mechanisms. This means that they are, although of macroscopic size, nevertheless withdrawn from the disorder of thermal agitation in essentially the same manner as is the electronic motion within atoms and molecules. A volume in the Wiley Structure of Matter Series, Maria Goeppert Mayer, Advisory Editor. November 1950. 161 pages. $5.00.

**Smooths the transition to quantum and relativistic mechanics—**

**CLASSICAL MECHANICS**

By H. C. Corben, Carnegie Institute of Technology, and Philip Stehle, University of Pittsburgh. Has two chief objectives: to present classical mechanics in a way that exposes the underlying assumptions and indicates the boundaries beyond which its uncritical extension is dangerous; and to help the reader sense the continuity in physical thought as he advances from classical mechanics to quantum mechanics and relativistic mechanics. November 1950. 388 pages. $6.50.

**Presenting both theoretical and practical aspects—**

**COLLOIDAL DISPERSIONS**

By Earl K. Fischer, National Bureau of Standards. Combines theory and manufacturing details. First five chapters supply the theoretical background for much of the work done in industrial laboratories. Then is given detailed information on the important methods of making colloidal dispersions, including the efficient operation of mills and dispersion equipment. Important features: a complete critical study of particle size together with a tabulation of pertinent data; a summary of dispersion by phase transfer ("flushing process"); methods of making colloidal dispersions. October 1950. 387 pages. $7.50.

**Stresses chemical aspects of finishing—**

**An INTRODUCTION to TEXTILE FINISHING**

By J. T. Marsh, F.R.I.C., F.T.I. Reviews the entire field of finishing with emphasis on its chemical aspects. Stressed are the recent developments that have increased our understanding of the chemical constitution and molecular structure of textile fibers. The two criteria used by the author in choosing finishes to be covered are commercial importance and scientific interest. In addition to describing some of the newer processes, the author re-evaluates the older commercial ones in the light of the recent increase in our knowledge of textile chemistry. November 1950. 532 pages. $3.50.

NYSSCO
HUMAN TRUNK MODEL

PRODUCED in quantity in our Model Department for sale at a low price. No school can afford to do without one of these useful and valuable preparations.

NYSSCO models are made of "Everlast-ing" rubber composition, and will withstand hard classroom usage far better than any other type of model at much higher prices. Once Nyssco Rubber Models are introduced into the laboratory, no other models will any longer suffice.

LM 311 HUMAN TRUNK. Without head, life-size, completely dissectible, including a copy of "Atlas of Human Anatomy". 132 keyed parts represented.

PHYSICS—Its Laws, Ideas, and Methods

By ALEXANDER KOLIN, The University of Chicago. In press

The aim of this text is to give a coherent presentation of physics, emphasizing the understanding of the scientific method. It gives a complete coverage of all fields and principles of physics, and a wide coverage of applications to physical and biological sciences. The role of physics in our civilization is illustrated by a number of examples.

INTRODUCTION TO STATISTICAL ANALYSIS

By WILFRID J. DIXON and FRANK J. MASSEY, JR. University of Oregon. In press

The basic purpose of this text is to present a first course in statistics requiring only a minimum of mathematics. Both classical and modern techniques are presented with emphasis placed on the understanding and application of these techniques rather than on mathematical development.

By V. A. RICE, University of Massachusetts, and F. N. ANDREWS, Purdue University. McGraw-Hill Publications in the Agricultural Sciences. In press

A thorough revision of a very successful text. The basic pattern remains unchanged, but material has been brought up to date throughout, incorporating the newer developments in reproductive physiology, inheritance, systems of breeding and selection. Much new illustrative material has been provided to further clarify the treatment of the subject.

PRINCIPLES OF PHASE EQUILIBRIA

By F. E. W. WETMORE and D. J. LeROY, University of Toronto. International Chemical Series. In press

A rigorous presentation of the heterogeneous equilibria in terms of laboratory criteria. The exemplary systems of one, two, three, and four components are chosen in a wide variety of types and arranged in such a way as to demonstrate both the common features and the general method of approach.

The NEW Berkeley MODEL 1600

COUNTING RATE COMPUTER

* Rapid Response  * Permanent Record  * From Binary or Decade Scaler

BRIEF SPECIFICATIONS

Designed specifically for tracer applications requiring faithful response to rapid changes in counting rate, the Model 1600 will operate from any scaler that can be made to provide successive output pulses after accumulation of predetermined count. Computer then converts elapsed time between successive output pulses into average counting rate. Counting rate can be read directly on visible meter of computer.

Choice of three recording rate ranges, in combination with proper scaling factors, permits selection of conditions for optimum statistical accuracy.

When designated as Model 1600A the unit includes standard recorder which provides permanent trace of counting rate.

STATHAM
Physiological Pressure Transducers

The Model P23 pressure transducers were specifically designed for the purpose of measuring and recording arterial and venous blood pressures. The system illustrated above demonstrates how simply measurements can be obtained with Statham transducers.

Please write our Engineering Department for more specific data.

ADENOSINE TRIPHOSPHATE
(Adenosine Triphosphoric Acid, ATP)

Adenosine triphosphate is a universal component of cells, providing the "energy-rich" phosphate bonds necessary for fermentation, respiration, and glycolysis. In muscle, it is the sole source of energy for contraction. ATP has shown promise in the treatment of arthritis and other muscle dysfunction, neuralgia ischiatrica, diabetic neuritis, and psoriasis.

Ample supplies of this important agent are available because of a Schwarz fermentation process of manufacture; the product is about 75 per cent ATP.

Schwarz fine chemicals satisfy the exacting requirements of products intended for use in biochemical or clinical research.

Four Books from MACMILLAN

Fundamentals of Comparative Embryology of the Vertebrates

By Alfred Huettner

This book trains the advanced student in the morphological aspects of various types of vertebrate embryos. The meticulous drawings by Dr. Huettner are unsurpassed in Biology texts. Two new chapters have been added in this edition: History and Theories of Development and The Embryology of the Pig. Revised Edition, $5.50

Biology of the Vertebrates

By Herbert Walter & Leonard Sayles

This book gives a broad background for advanced study, not only in anatomy, but also, in embryology, histology, and vertebrate physiology. The third edition has maintained the flavor of previous editions and has been enriched by many new illustrations. The material has been brought up-to-date. Third Edition, $6.00

Man's Physical Universe

By Arthur T. Bawden

This edition retains the basic approach of the original edition, but brings the applications of general principles up-to-date. The basic aims of the book are to impart an understanding and appreciation of the nature of the universe and man's relation to it and to integrate the important generalizations of physical science. Third Edition, $5.00

Practical Invertebrate Anatomy

By W. S. Bullough

A complete laboratory reference for courses in invertebrate zoology, this book describes more than 100 invertebrate animals, commonly examined and dissected by zoology students. The genera have been chosen for their general availability throughout the world and are clearly illustrated. $4.50

THE CARVER
LABORATORY PRESS

for General Research
and Development

In the biological, physical or chemical laboratory... wherever pressing is required...
this small, powerful, completely self contained press provides controlled pressures up to 20,000 lbs.;
temperatures to 400°F. Interchangeable Carver standard accessories, available for optional use,
provide means for handling numerous materials for some 60 general applications of small scale pressing tests.

All standard equipment, available for immedc ate shipment from stock.

Latest Catalog describes the Press and its many applications.

REGISTER NOW

for the Cleveland Meeting of the AAAS

AVOID CONGESTION AND DELAY
GET YOUR GENERAL PROGRAM –
BY FIRST CLASS MAIL – EARLY IN DECEMBER

Registration in advance of arrival at the 117th Annual Meeting of the AAAS in the downtown hotels of Cleveland, December 26–30, 1950, has so many advantages that we wonder why almost everyone doesn’t take this simple step. For instance:

1. You avoid congestion and delay at the Registration Desks in busy foyers at time of arrival. All indications point to a large attendance since all of the Association’s seventeen sections and subsections, and more than forty societies, will have sessions with excellent programs and there will be a number of important symposia.

2. You receive the General Program early in December in ample time, unhurriedly to decide among the events and the sessions that you wish to attend.

3. Your name and hotel address will be in the enlarged Visible Directory the first hour of the first day of the meetings, since it will be posted in Washington as soon as processed.

4. Advance Registrants will have the same privileges of receiving a map and directory of points of interest of Cleveland, literature, radio broadcast tickets, etc. At the convenience of Advance Registrants, these will be distributed from the Main Registration in the Public Auditorium—the location of the Annual Science Exposition, the Visible Directory, and the Science Theatre. Admission to the splendid series of latest scientific films will be free to all Registrants.

At the 1949 Meeting, the Council of the AAAS voted overwhelmingly to continue Advance Registration. To insure its prompt receipt, the General Program will be sent by first class mail December 1–4, 1950—which is also the closing date for Advance Registration.

- - - - - - - THIS IS YOUR ADVANCE REGISTRATION COUPON - - - - - - -

1. Advance Registration Fee (the extra quarter covers part of the first class postage) enclosed:
   □ $2.25 A.A.A.S. Member (check one) □ $2.25 College Student
   □ $2.25 Wife (or Husband) of Registrant □ $3.25 Nonmember of A.A.A.S.

2. FULL NAME (Miss, Mrs., Dr., etc.)
   (Please print or typewrite) (Last) (First) (Initial)

3. ACADEMIC, PROFESSIONAL, OR BUSINESS CONNECTION

4. OFFICE OR HOME ADDRESS
   (For receipt of Program and Badge)

5. YOUR FIELD OF INTEREST

6. CONVENTION ADDRESS
   (If not known now may be added later)

7. DATE OF ARRIVAL DATE OF DEPARTURE

Please mail this Coupon and your check or money order for the fee, $2.25 or $3.25, to
AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE
1515 Massachusetts Avenue, N.W., Washington 5, D. C.
A Complete Electrophoresis and Schlieren Laboratory:

Built-in regulated and stabilized power supply...no "B" batteries.

Integral refrigeration system...no ice cubes.

Internal rapid dialysis facilities...no additional refrigerator.

Base for sturdy support...no special table or carriage.

All optics in air-conditioned space...no drying agents.

Cells available for adsorption, diffusion, and macro-preparative work.

Price of the Aminco Portable Electrophoresis Apparatus, ready to plug in, and complete with cell, holder, and accessories required for immediate operation...$2500, F.O.B. Silver Spring, Md.

Apparatus Constants

Physical Dimensions—Base unit, 24 x 18 x 13 inches; over-all height, 46½ inches.

Optical Path Length—90 inches.

Screen Size—3¾ x 4¾ inches (standard cut film).

Magnification—2.

Temperature Control—plus-minus 0.02°C.

Current Range—1-30 milliamperes.

A.C. Ripple—less than 0.03% of total current.

WRITE FOR BULLETIN 2281-K
INSPECTION COSTS TUMBLE

Unparalleled speed and economy in checking critical components right at the production line is possible with an AO Optical Projection Comparator. More light on screen... superior optical performance... uniform magnification... freedom from distortion... all help observers to inspect quickly and accurately. Factory alignment—practically no adjustments for the user to make... fingertip controls... simple, sturdy, troublefree optics and mechanics... mean you can depend on the equipment to perform long and faithfully under constant factory usage.

The illustration above shows an application at Whitney Chain & Mfg. Co. In one quick operation, silent chain links are checked for pitch (distance between holes), diameter of holes, and position of angular edges. Pitch is held to .0005" and diameter is held to ± .0005".

Adaptations of the AO Optical Projection Comparator can be made to meet a wide range of special requirements. For complete information write Dept. L4.
