**Gulf Research uses the new Electro-Chemograph to analyze engine deposits**

- It's fast
- It's accurate
- It's convenient

**Gulf Research and Development Co., Pittsburgh** . . . central research organization for the Gulf Oil Companies . . . speeds up routine chemical analysis with their new Type E Electro-Chemograph. Typical time-saving task for this "automatic chemist" is the analysis of minute amounts of internal combustion engine deposits left on valve stems and similar surfaces. Gulf Research has set up routine procedures to determine for lead, copper, nickel, zinc, and other metals.

Gulf men have streamlined the operation to a point where they can now do 9 determinations in 45 minutes. The Electro-Chemograph tells them what metals . . . and how much of each . . . are in the test sample. Controls are conveniently grouped on the console to provide easy selection of range and damping to meet just about all analytical requirements. The whole test procedure is so simple, as a matter of fact, that direction plate instructions on the console prove ample for 90% of routine work.

The new Electro-Chemograph gives you polarographic analysis at its best. Applications are broad. Proved superior for research work as well as routine analysis, the instrument is being used effectively by production and test labs in detecting small quantities of minor additives such as catalysts, plasticizers, oxidizing agents . . . for most common wet analyses on steel and non-ferrous materials . . . in trace analyses for poisons . . . in assaying hormones and vitamins . . . and in many other applications in manufacturing, research, and testing fields.

**Send for information . . .**

Our new Cat. EM9-90 tells all about the new Type E Electro-Chemograph. Also—our bibliography on polarographic analysis has recently been revised to include every paper published between 1903 and 1949 which we've been able to discover. Write our nearest office, or 4926 Stenton Ave., Phila. 44, Pa.
What's inside?

That's what teachers want to know. A book may have an attractive cover, but that doesn’t mean much to them.

It’s what’s inside the cover that is important.

The material inside the cover pictured below seems to be something pretty special, because “Frobisher” has become one of the most widely used bacteriology texts in America.

Why?

It must be that teachers have found in “Frobisher” just what they want. They have found completeness, authority, a modern approach, logical organization, hundreds of helpful illustrations. Above all, they have found that “Frobisher” gives them an extra, all-important dividend: honest-to-goodness student interest in the course.

# Table of Contents

- Carbon
- Compounds of Carbon with Hydrogen — Saturated Hydrocarbons: The Alkanes
- Compounds of Carbon with Hydrogen — Unsaturated Hydrocarbons: The Alkenes and Alkynes
- Compounds of Carbon with Hydrogen and Halogens — The Haloalkanes
- Compounds of Carbon with Oxygen and Hydrogen — First Oxidation: Alcohols, Ethers
- Compounds of Carbon with Oxygen and Hydrogen — Second Oxidation: Aldehydes, Ketones
- Compounds of Carbon with Oxygen and Hydrogen — Third Oxidation: Organic Acids
- Acid Derivatives: Salts, Esters, Acid Anhydrides, Acyl Halides, and Amides
- Substituted Acids
- Compounds of Carbon with Nitrogen
- Carbohydrates
- Nomenclature
- Cyclic Compounds of Carbon with Hydrogen
- Aromatic Compounds with Halogens and Sulfur
- Aromatic Compounds with Nitrogen
- Aromatic Compounds with Oxygen
- Heterocyclic Compounds
- Industrial Developments in Organic Chemistry
- Biological Developments in Organic Chemistry
- Organic Reactions in Vital Processes
- Appendix: Wartime Developments in Organic Chemistry
- Index

## Special Features

- correlation of the principles of organic chemistry with those of general chemistry through the electronic structure approach.
- 20 short chapters
- subject introduced at once by a study of carbon. Material from that point on is developed in a very logical manner — each functional group is discussed under the headings of naming, structure, preparation, reactions and special compounds.

## Unusual Importance

- section on organic chemistry and its relation to modern warfare and to civilian welfare in war and peace.

### 324 Pages - 45 Illustrations - $4.50

FIRST YEAR COLLEGE CHEMISTRY
By J. W. Barker and Paul K. Glasoe, Wittenberg College. In press
Designed to provide the foundation of encyclopedic fact and underlying principles upon which a student can predicate further work in chemistry. Emphasis is on the exposition of principles, but these are supported by adequate descriptive matter, including historical background.

ASTROPHYSICS: A Topical Symposium
A symposium of papers treating "essentially all the active fields" of astrophysics. The fifteen contributors are leaders and authorities in their respective fields. The volume commemorates the Fiftieth Anniversary of the Yerkes Observatory and reviews the progress in astrophysics during the half-century since the founding of the observatory. The book combines many of the features of a textbook, a handbook, a historical study, and a technical treatise.

PRINCIPLES OF CHEMICAL THERMODYNAMICS
By Martin A. Paul, Triple Cities College of the State University of New York. International Chemical Series. 740 pages, $7.50
A stimulating and imaginative text, designed to supplement and extend the treatment of thermodynamics begun in the standard physical chemistry course. Emphasis throughout is on principles and their origin, with specific applications to a limited number of fields, primarily the concern of the chemist: energy and equilibrium properties of pure substances, solutions, and chemical transformations, including electrochemical applications.

ANATOMY OF THE CHORDATES
Here is a text for the full-year's course in comparative anatomy of the vertebrates. It is a carefully prepared book, presenting the subject in a readable, interesting manner, using illustrations as much as possible to stimulate interest and clarify text material. The book discusses the classification and natural history of the main groups of living animals making up the phylum Chordata. A chapter on development follows. Then, each organ system is taken up separately and from a comparative point of view.

technicon paraffin knife

makes work with paraffin-embedded tissues quick and easy. Great for cutting large blocks into small ones; for mounting blocks on a microtome object disc; for squaring up blocks; for separating ribbons in a water bath... Hollow stainless steel handle doesn't heat up; spring switch under thumb gives Finger-Tip Heat Control — easy to keep knife at the right temperature. When not in use lay knife in saddle rest — Blade UP keeps knife hot; Blade DOWN current is "off."

technicon microslide dryer

delivers slides ready for staining in 7 minutes! Just drop slides, in an Autotechnicon Slide Carrier, into the hatch, flip the switch and close the cover. A steady current of warm, filtered air blowing over the slides carries away all moisture, leaving them bone-dry and dust-free. The filter is replaceable. There's no distortion, either — the warm clean air is well below the melting point of paraffin.

technicon constant temperature water bath

insures smooth, even spreading of your tissue ribbons. The water temperature is just right — never too hot or too cold, thermostatically held at any set temperature from 20° to 60°C. There's no melting paraffin to distort tissues — no folds or wrinkles, no bubbles due to frequent water change. Temperature stays constant, day-in, day-out. And it's easy to see your sections against the dull finished black interior of the bath.

Here's

PRECISE DETECTION
of HIGHLY DILUTED
stable isotopes

Through its ability to measure isotope-ratio differences in the sixth decimal place, precisely and rapidly, the Consolidated-Nier Isotope-Ratio Mass Spectrometer is the ideal instrument for stable isotopic tracer programs.

Exceptional accuracy, combined with simplicity of operation, make it a practical tool for research in the fields of:
- biochemistry and medical research
- chemistry and chemical engineering
- physics and geology

This instrument is in use in numerous medical, biological, and chemical research laboratories throughout the world. It has played an important part in many recent discoveries and scientific advances.

1. Two separate ion collectors permit simultaneous intensity measurements of two ion beams with direct reading of the ratio.
2. Gas samples as small as 0.1 ml., S.T.P., can be handled in the readily accessible sample introduction system.
3. Measurement controls are conveniently located for a seated operator.
4. Switching controls add flexibility by permitting the taking of a variety of measurements.

For performance characteristics, operating techniques and construction details, write for your copy of bulletin CEC-1803-X27

New Texts for Study and Reference

COLLEGE ZOOLOGY
Sixth Edition

One of the leading general zoology texts for 40 years, this book has been revised and rewritten to include the latest discoveries in zoology, as well as the suggestions of outstanding specialists in the field. 300 magnificent new illustrations have been added in this edition. To be published in April

Evolution Emerging
Volume I & Volume II

This monumental work sets forth the epic of evolution from the evidence distilled from the author's 50 years of study, investigation, and teaching in the American Museum of Natural History and Columbia University and his field studies in remote regions of the world. Vol. I: the text; Vol. II: the illustrations. To be published in March

FOUNDATIONS OF BIOLOGY
Seventh Edition

Dr. Woodruff's well-known basic text for courses in general biology has been revised and edited by Dr. Baitsell, outstanding teacher, author, and editor. This edition includes new illustrations and important new material, particularly in the chapters concerned with vertebrate structure and function. To be published in April

GENETICS IN THE
20th CENTURY

This book is a collection of the papers presented at the Jubilee Meeting of the Genetics Society of America in September 1950. The papers were prepared for the meeting by leading authorities in the field of genetic research. To be published in April
What's the cost of good Flame Photometry?
we'll bet our hat that many a scientist doesn't realize his laboratory can own and use the

New Beckman attachment

FOR ONLY $395
Cat. No. 24532T

Used in conjunction with the Beckman "DU" Spectrophotometer, this Flame Photometry attachment provides Compactness, Convenience and Accuracy—at a cost about one-half of what most technicians would guess. Quantitative determination is provided for more than forty elements, including heavy metals, rare earths and the alkali metals. Complete specifications and details are available on request.

OUTSTANDING FEATURES

• Low fuel consumption
• Only 1 to 3 ml of sample solution required per analysis
• Non-aqueous solutions handled as readily as water
• Elimination of drifts and clogging
• Accuracies of 0.5% or better

• Furnished complete with housing assembly for burner; regulator unit assembly; one each 2' and 4' dual hose assembly; 12 glass beakers, 5 ml; and atomizer-burner unit for acetylene-oxygen, but without Spectrophotometer pictured.

Can also be furnished for use with Oxyhydrogen

Are you receiving . . .

INSTRUMENT NEWS is an 8-page quarterly published in the interests of furthering research, material analysis, and production through modern optical instrumentation. Articles of technical and general interest are prepared by leading workers in the field and by the Perkin-Elmer staff.

Some of the outstanding articles from the Fall, 1950, issue are listed below:

ACTH AND ADRENAL HORMONES IN MENTAL DISEASE
Flame Photometer Aids Hormone Research
NEWER OPTICAL METHODS FOR CELL STUDIES
Article by R. C. Mellors
PRISM MATERIALS FOR INFRARED ANALYSIS
Article by C. W. Young

Among the articles in the current Winter, 1951, issue are:

VIDEO SCANNING METHODS FOR INFRARED SPECTROMETERS
Article by S. Silverman & B. W. Bullock
ELECTROPHORESIS AIDS CANCER RESEARCH
Article by Dr. Dan H. Moore
INFRARED FOR PRODUCT CONTROL
Editorial Feature
HIGH-SPEED THERMOCOUPLES

J. W. Edwards

Ann Arbor, Michigan
Model T.F. Electric Furnace has merited wide acceptance in laboratories, experimental shops and small parts industries. Its wide range of temperatures and exact temperature control makes it suitable for wax elimination, enameling, heat-treating, precipitate drying, ashing, ignitions and fusions.

It has a continuous operating temperature range from 100°F (37.7°C) to 1800°F (968°C); intermittent heating as high as 2000°F (1100°C) does not damage the muffle winding or refractories. The rate of temperature climb can be controlled exactly and temperatures can be reproduced precisely.

The furnace rapidly heats the large muffle chamber; dimensions 4½” deep, 4” high, 9” long. Since the chamber is wide and shallow, part of the load can be removed without disturbing the remainder.

A dependable Pyrometer gives direct readings in both Fahrenheit and Centigrade. The Pyrometer and Percentage Timer are insulated against high temperatures. Contacts are totally enclosed. A neon pilot light indicates the on-off heating cycle. Heavy nickel-chrome elements are wound outside of the muffle to protect the windings against corrosive fumes. The muffle is fitted with a steel tray to keep floor of furnace free of encrustations. The furnace is economical; it draws only 1,500 watts. The furnace case is strongly constructed of steel. Base has a black crackle finish; the top is finished in a special heat resistant aluminum paint. The undersurface of the furnace is cool and can be mounted on all table surfaces. Base has four rubber feet to protect mounting surfaces.

Standard equipment includes the Pyrometer, Percentage Timer, steel tray, 4-foot Neoprene electrical cord.
YOUR SKILL DESERVES the world's finest...

...IN IMAGE QUALITY
Improved apochromatic objectives, precision-constructed to exacting Bausch & Lomb standards... to give you clear, sharp distortion-free images. The entire optical system is BAL-COTED to eliminate internal reflection and reduce flare... to ensure image brilliance.

...IN LIFETIME ACCURACY
The patented ball-bearing fine adjustment is an extremely slow-motion control to provide accurate measurement of specimen depth. It permits repeated settings for its planes of critical focus.

...IN CONVENIENCE
Lower fine adjustment, for greater operating ease. The binocular body is quickly interchangeable with an optional monocular tube for photomicrography, measuring, micro-projection, etc. Your choice of three precision-built substages, each with extra-wide bearing surfaces. The stand is sturdily constructed and well-balanced to insure solid stability.
