The electrons landed here...

...and the diffraction pattern they left on this plate measures the splitting of the laminae in a 1000-Angstrom-unit-thick sheet of bent mica through which they passed.

For industry, electron diffraction patterns are revealing and identifying oxides on non-ferrous metals, the faint beginnings of corrosion on steel, scale in distillation equipment, crystal formations in chemical processes—thin films of all kinds.

A host of fine instruments that are serving science and industry today are built around the simplicity, the economy, the easy reproduction, and the incontrovertibility of photographic recording. We make the specialized sensitive materials they require—for electron diffraction and electron micrography, for spectrochemistry, for x-ray diffraction, for mass spectrography, for work in the infrared and the deep ultraviolet, for autoradiography with radioisotopes, for capturing tracks of cosmic ray primaries in the upper atmosphere and mesons in the great nuclear accelerators, for analyzing the stuff that distant galaxies are made of.

JUST OFF THE PRESS: A new edition of the booklet, "Kodak Sensitized Materials for the Scientific and Industrial Laboratory," is now available. It gives the information you need to select the specialized photographic materials best suited for your particular requirements. For your copy, write to Eastman Kodak Company, Industrial Photographic Division, Rochester 4, N. Y.

RECORDING FACTS
...the scientific function of photography
BECAUSE the need for registration of various physiological phenomena—either singly, or simultaneously in twos, threes, or fours—varies greatly among the different groups engaged in diagnosis, research, or teaching, Sanborn makes available several recording systems, three of which are shown and identified at the right.

To help you select the equipment best suited to your needs (or budget), Sanborn Company has prepared the above chart which clearly shows the scope or applicability of each Sanborn recording system. Listed under each instrument are phenomena which are illustrative of the fields in which the equipment may be used. Supplementary equipment or attachments, where needed, are indicated and briefly described.

The folder also points out and describes how the ready interchangeability of amplifiers and preamplifiers in the Twin- and Poly-Viso makes possible a wide range of recording possibilities. Other factors, such as paper travel speeds, are charted for ready reference. We will gladly send you a copy of this Applicability Chart or discuss with you further how Sanborn equipment can best fit into your recording picture. Simply address

THE original Van Slyke principle and technique remain unchanged, but these improvements are noted in this present-day model: more substantial construction, adjustable leveling bulb, new glare-proof manometer and burette illumination, independently controlled lights and motor, mounted wash bottle and receptacles for glass tips of suction and distilled water tubes contribute to ease and accuracy of operation.

WRITE

Phipps & Bird INC.
RICHMOND, VIRGINIA
Bacteriologist: Ph.D., Assistant Professor desires relocation in research position with or without teaching duties. Active research man. Publications. Experienced metabolism, nutrition, enzymology, pathogenesis. Biochemistry, physical chemistry. Box 390, SCIENCE.

Bacteriologist: M.D., Ph.D., D.P.H. in charge of department of English university interested in similar position in U.S. Box 592, SCIENCE.

Bacteriologist: Ph.D., D.P.H.; trained in protein techniques, enzyme work, food chemistry, radioactive tracer methods; excellent general background. Box 579, SCIENCE.

Bacteriologist: Ph.D., age 33, desires a teaching position with opportunity for research. Specialties: Ecology, Conservation, Natural History, Anatomy. Publications. Box 582, SCIENCE.

Entomologist: M.S. '51. Desires position Applied Entomology or research. Also interested Ornithology and Botany. Experience graduate assistant. Box 583, SCIENCE.

Experienced Technical Editor, article writer, public relations speaker, in fields of Electronics, Physics, Photography, Fire Safety, etc., seeks position on policy-making level, preferably with major electronics manufacturer, a product man or young executive. Salary requirement $15,000. Box 580, SCIENCE.

Immunology and Virology: woman, publications, experience, excellent background and references. Box 571, SCIENCE.

Virologist: M.S. Bacteriology, 2 years virus investigation. Publications. Desires position in industrial or academic research. Box 586, SCIENCE.

LARGE-GROUP EXHIBITION
IN THE DARKENED AUDITORIUM

So intense is the Scopicon light source that images up to ten feet across can be projected. Through a system of auxiliary lenses the operator can follow a biological specimen through a progressive series of ever-closer localizations, up to ultimate demonstration under oil-immersed objectives.

2 or 10 or 1000

Quickly adaptable to viewing on any scale, the mobile Scopicon couples convenience with efficiency. Its high-pressure mercury arc is the brightest light source ever employed for microprojection. The focal spot is only 1mm square (approx.). Its pinpoint character permits flickerless projection of sharply detailed images up to ten feet across even under oil-immersed microscope objectives. Let us send you the brochure describing this remarkable instrument.

Scopicon
micro-projection equipment
SCOPICON, Inc. 215 E. 149 ST. NEW YORK 51
For YOUR AO SPENCER Microscope
(Series 13-33)
MODERN,
COMPLETE PHASE EQUIPMENT

PRICE IS $147.00
for Phase Turret Condenser with Centering Telescope, in case.
Objectives and annular diaphragms extra, as selected.

It's a simple, economical matter for owners of AO Spencer No. 33 or 13 Microscopes to convert for Phase Microscopy. Just add the AO Spencer Phase Turret Condenser and your selection of phase objectives with corresponding annular diaphragms.

You may choose from 10X, 20X, 43X, and 97X phase objectives in Bright Contrast, Dark Contrast, or B-Minus Contrast. Annular diaphragms are interchangeable and individually centerable. The Turret operates easily and without backlash. Centerable condenser mount permits accurate location of the condenser in the substage.

Special long focus Diaphragms are available for micro manipulation and tissue cultures located up to 17 mm above the stage.
A limited supply of these AO Phase Turret Condensers is available for immediate delivery.

See your AO Spencer Distributor or write Dept. V2.
