ANNOUNCING a new stabilized

L&N pH indicator

Check these distinctive L&N advantages...

✓ Continuous 5 1/2" scale—covers full range of pH 0 to 14 . . . readable to ±0.02 pH.

✓ Electrode system—takes any suitable type . . . but circuit especially designed for high resistance glass electrode systems.

✓ Grounded or ungrounded solutions—can be checked with equal ease and accuracy.

✓ Only 2 controls, 1 switch—standardization and temperature-millivolt controls . . . zero switch.

✓ 4 voltage ranges—0 to +700, 0 to −700, 0 to +1400, and 0 to −1400 mv . . . for redox work and Karl Fischer Titration measurements.

✓ Fast warmup—not more than 1 minute.

✓ Short response time—1.5 seconds . . . for most readings.

This converter-type pH Indicator offers remarkable stability. Embodying important refinements in circuit design, it is unaffected by normal fluctuations in line voltage . . . or by zero drift of the amplifier.

In lab or plant—you'll appreciate the many advantages of this new instrument. The few required adjustments are simple to make. Single, continuous pH 0 to 14 scale eliminates range changing . . . a big help when you're working near pH 7. And you can read to within ±0.02 pH . . . on either grounded or ungrounded solutions.

Key to stability: the Indicator incorporates the high quality shielded converter developed for our Speedomax electronic recorders. Its circuit employs d.c. to a.c. conversion, a.c. amplification, and conversion back to d.c. for voltage feedback. Conversion stabilizes zero. Feedback stabilizes gain.

Fig. 77. The action of skeletal muscles in moving blood through the veins. A, Resting condition. B, Muscles contract and bulge, compressing veins and forcing blood toward heart. The lower valve prevents backflow. C, Muscles relax, and the vein expands and fills with blood from below; the upper valve prevents backflow.

Simple?

It would be pretty difficult to present the concept of blood flow any more simply or clearly than it is presented above.

But superficial? No, sir. Everything essential is there. Which goes to prove that a textbook can be clear, simple and interesting without being superficial.

Dr. Claude Villee's book—Biology: The Human Approach—is written on that assumption. It is clear and interesting, as thousands of students will attest, but it also presents all the information that should be acquired in the college course. The author says, on this score: "Most students find the facts of life so interesting that a superficial treatment is both unnecessary and an affront to their intelligence."

If you're not now using the Villee book, Professor, get it down from the shelf and take a good look at it. Or write for an examination copy. And, A Very Happy New Year from

Microscope, camera and light source in one convenient unit!

Leitz Panphot

Universal Metallograph

In the Panphot, Leitz offers the perfect combination of research microscope and reflex camera for the metallurgical research laboratory. Operating parts for observation and photomicrography are right at hand, and you can change from one to the other quickly and dependably ... without moving from your chair. Light source, microscope and camera are permanently aligned in a single, easy-to-use instrument.

Designed to meet a wide range of needs, the Panphot permits the use of reflected light, darkfield illumination and polarized light. A full line of accessories is available to equip the instrument for all types of photomicrography, photomacrography and for drawing and projecting micro images. The Panphot takes 3½" x 4½" or 4" x 5" plates or cut film for both black and white and color work.

Another of the famous Leitz microscopes, recognized everywhere as the finest microscopes made anywhere.

For details, write Dept. SC — E. LEITZ, Inc., 304 Hudson Street, New York 13, N.Y.

THE MICRO-FLOW REGULATOR
Here is a new clamp for regulation of flow through plastic or rubber tubing, 0"—3/8".

The smooth-acting ratchet permits minute changes of flow for infusions etc., with exact return to a former rate. One "click" equals .00078" movement of the pressure plate.

 Constructed entirely of stainless steel, with the traditionally fine workmanship of the Harvard Apparatus Company, Inc. The cut shows actual size.

From stock, $5.00

nuclear INSTRUMENTATION
for Use with CARBON 14

MODEL 2611 COUNT RATE METER
Portable, efficient meter, designed for detecting Carbon 14, Sulfur 35, and other soft radiation sources. Thin mica end-window probe, will also serve for use as gamma survey meter. One-hand operation. Life of G-M counter unlimited by use.

Laborious, costly but vitally necessary, washing stacks of soiled laboratory glassware remained a problem until Fisher engineers developed the new Laboratory Glassware Washer. It not only washes, it rinses, steams and dries a wide variety of soiled clinical glassware.

Most important, the new Washer solves a critical personnel problem by replacing an undesirable, expensive, full-time job with a simple, once-a-day mechanical operation. The savings in time and payroll are obvious.

The Washer is extremely versatile since glassware baskets may be selected to accommodate particular items, such as microscope slides, pipettes, culture tubes, funnels, bottles, flasks, etc. Breakage is virtually eliminated.

No modern laboratory can afford to overlook this labor-saving, cost-cutting development from the Fisher laboratories.

Write today for free bulletin "The Fisher Laboratory Glassware Washer."

CHECK THESE POINTS THAT SPELL SUPERIORITY

1. An unusual wide range of driving speeds without the disadvantages of gear shifting.
2. Immediate change of speed without lag—tracing is continuous.
3. The number of possible speeds is infinite.
4. Speed changes made through dual controls—directly visible and accessible.
5. Special automatic weight adjustment—an idler drum to compensate for variations in temperature and humidity.

yet year after year laboratory projects prove to be inconclusive because of inconsistent and undependable reagents. For more than 11 years CARWORTH FARMS has been experimenting with newer and more advanced methods of improved guinea pig complement production and

"VACSEAL" Guinea Pig Complement represents the culmination of these many years of efforts.

Our large output enables us to pool the serum of no less than 11 guineapigs per lot, assuring the highest titer uniformity.

"VACSEAL" is packaged in high vacuum all glass containers. It is distributed in three sizes with a special diluent for restoration to the following amounts:

3cc. 7cc. 20cc.

**10 TIMES GREATER ACCURACY!**
**PIPETTE AUTOMATICALLY TO .001 C.C. PRECISION**

**FILAMATIC**

Electronically Regulated Automatic Pipette

Wide filling range—.025 c.c. to 50 c.c. In tests at leading research center in Baltimore, the Filamatic dispensed volumes of 0.5 c.c. with an average variation of .001 c.c. This accuracy was reproducible on re-runs without trial and error manipulation. Amazing results prove Filamatic 10 times more accurate than heretofore possible with automatic pipetting machines!

- Electronic control—Maintains constant motor torque at all speeds.
- Wide filling range—.025 c.c. to 50 c.c. without costly attachments.
- Adjustable speed—10 to 90 deliveries per minute.
- Heavy duty, 1/30 HP Gearmotor.
- Micrometer type adjustment of delivery volume.
- Aseptic filling unit—Instantly removable for cleaning or sterilizing.

Ask your dealer for demonstration. Write for bulletin S12-2
