What GENERAL ELECTRIC People Are Saying

W. R. G. BAKER
Electronics Division

RADIO AND TELEVISION—WEAPONS OF TRUTH:
The web of lies and deceit woven by the Kremlin is so tangled and so tenuous that the Communists must erect an iron curtain and must struggle continually to keep the truth from the peoples they dominate. They know they dare not admit the truth about the United States, about our standard of living, about our automobiles and homes and refrigerators, and particularly about our freedoms. They fear the truths carried by the powerful transmitters of the Voice of America, many built by and several operated by General Electric.

Lies and propaganda cannot live long where truth can be heard and seen. The sensitive ear and unblinking eye of radio and television are quick to detect the false note in the voice, or the sudden look of cupidity. A more effective weapon against propaganda than political censorship, through political selection of those events which are allowed to be reported by radio and television, would be the candid reporting of the radio microphone and television camera.

Radio has long listened and reported on governmental affairs, and it has become a past master at interpreting the world’s events, although on occasion with too little reporting and too much interpreting. It is time that radio and television came of age, and lent their eyes and ears freely to the cause of communication of truth. Certainly the right of privacy is invaded if we turn on microphones and cameras during an inquisitorial congressional investigation in which no rebuttal is allowed, but this invasion of privacy stems not from the use of radio or television, but from the very procedures used by government.

Let us not forget that our government is a government by the people as well as for the people, and the closer we can come to an informed, enlightened democracy, the stronger we will be against the forces of international gangsterism, or against predatory tactics by any group, clique or faction within our borders.

ULTRASONIC CLEANING OF SMALL PARTS:
Scientific interest in the varied and startling phenomena of ultrasonics inevitably leads to the question, “What are the applications?”

Ultrasound cleaning is one of the best answers yet given to that question. Here is a method of removing oil, grease, chips, dirt, lapping compound, and many other contaminants from the surfaces of small precision work pieces at a rate hitherto unattainable, and to a degree of cleanliness that usually surpasses the most stringent industrial standard.

This is accomplished by beaming a high-frequency sound wave through the cleaning solvent or detergent solution, as the case may be, to the surface of the submerged work piece. The sound wave, usually, but not always, in the 300- to 1000-kilocycle-per-second range, is set up directly in the liquid cleaning bath by means of a vibrating quartz crystal. The crystal, in turn, is driven by an electronic oscillator.

Within certain limitations we can make superlative claims for this method. It is applicable to pieces of almost any material—to metals, glass, textiles, or molded products—and to pieces of practically any conceivable shape. We may even say that the more irregular the shape the better; ultrasonics is particularly good for getting at blind holes and capillary cavities. Great variety is possible in the choice of solvent, solutions, or detergents. The liquid medium must of course be compatible with the material of the work piece, and will usually be one which would accomplish a partial cleaning without ultrasonics. We confidently predict that the present decade will see many installations saving untold thousands of manufacturing dollars.

ANATOMY OF THE CHORDATES
By Charles K. Weischert, University of Cincin-
nati. McGraw-Hill Publications in the Zoological
Sciences. 921 pages, $8.00

LIMNOLOGY. New 2nd Edition
By Paul S. Welch, University of Michigan. Mc-
538 pages, $8.00
FIRST YEAR COLLEGE CHEMISTRY

By John W. Barker, Wittenberg College; and Paul K. Glasoe, Carthage College. 501 pages, $5.00

The elementary text designed to provide a foundation of fact and principle upon which a student can rely for further work in chemistry. Each chapter is divided into two sections. In the first part the continuum of concepts is developed. In the second are the addenda which give historical background, additional factual information on advanced topics of related and special interest.

MAN AND THE BIOLOGICAL WORLD

2ND EDITION

By J. Speed Rogers, Theodore H. Hubbell, University of Michigan, and C. Francis Byers, University of Florida. Ready in April

A new revision of this selective presentation of biological principles, the second edition contains new material on such topics as evolution, and the structure and function of the human body and of the plant, particularly as concerns hormones, vitamins, and physiology of blood, photosynthesis, and the transport of water and solutes in plants.

GEOLOGY

By O. D. von Engeln, Cornell University, and Kenneth E. Caster, University of Cincinnati. Ready in May

A basic text covering both physical and historical geology, this book starts with geologic phenomena familiar to the student, and, following this consideration of physical geology, presents the facts of historical geology as an outgrowth of the former.

COLLEGE PHYSICS

2ND EDITION

Presents the basic ideas of physics for students of science and engineering at the college level. Simple, direct, and concise explanations and solved numerical problems help the student acquire exact knowledge of physical principles.

LEA & FEBIGER

Philadelphia 6, Pa.

April 18, 1952
Review these 17 new books . . .

Textbook of Organic Chemistry
Third Edition by G. H. Richter, The Rice Institute
"an excellent text . . . up-to-date . . . well-constructed". 1952. 762 pages. $6.75.

Theoretical Petrology
By Tom F. W. Barth, Geological Museum, Oslo, Norway
"a very comprehensive and yet complete study of the processes involved in the formation of rocks". 1952. 387 pages. $6.50.

The Design and Analysis of Experiments
By Oscar Kempthorne, Iowa State College
"a valuable contribution to the field of experimental design". 1952. 631 pages. $8.50.

Understanding Heredity: An Introduction to Genetics
By Richard B. Goldschmidt, University of California
An elementary picture of the great outlines and significance of genetics. 1952. 228 pages. $3.75.

Tensor Analysis: Theory and Applications
By I. S. Sokolnikoff, University of California
"an excellent book . . . demonstrates the great ability of the author as a teacher and as a writer of textbooks". 1951. 335 pages. $6.00.

Principles of Weed Control
By Gilbert H. Ahlgren, Rutgers University, Glenn C. Klingman, North Carolina State College, and Dale E. Wolf, E. I. du Pont de Nemours and Company
"an inclusive and well balanced treatment of the subject . . . useful as a text and a reference". 1951. 368 pages. $5.50.

Forestry in Farm Management
By R. H. Westveld, University of Missouri, and the late Ralph H. Peck. Second Edition prepared by R. H. Westveld
"represents outstanding improvement over other texts in the field from several standpoints". 1951. 346 pages. $5.00.

The Formation of Mineral Deposits
By Alan M. Bateman, Yale University
"will unquestionably be accepted as the text in mineral deposits". 1951. 371 pages. $5.50.

Ecological Animal Geography
Second Edition by W. C. Allee, University of Florida, and Karl P. Schmidt, Chicago Natural History Museum, based on the original work of the late Richard Hesse, University of Berlin
"by far the best general introduction to animal ecology". 1951. 715 pages. $9.75.

Radioactivity Applied to Chemistry
By Arthur C. Wahl, Washington University, and Norman A. Bonner, Cornell University
"a really fine contribution to the field of applied radiochemistry . . . clearly-written, well-arranged". 1951. 604 pages. $7.50.

Principles of Human Geography

An Introduction to Organic Chemistry
By the late Alexander Lowy and Benjamin Harrow: Seventh Edition revised by Benjamin Harrow and Percy Appelbaum, both at College of the City of New York
"deeply impressed . . . It is one of the most usable and clear-in-presentation texts of which I know". 1951. 480 pages. $5.50.

Man and the Animal World
By Bernal R. Weimer, Bethany College
"very much impressed . . . I like especially the arrangement of material . . . the number of interesting features put in as interest catchers". 1951. 569 pages. $5.00.

Practice of Wildlife Conservation
By Leonard W. Wing, A & M College of Texas
"I find it to be filled with meat and written in a clear and understandable manner". 1951. 412 pages. $5.50.

Physical Geography
By Arthur N. Strahler, Columbia University
"fills a definite need for a modern approach to the physical elements of geography". 1951. 442 double-column pages. $6.00.

Analytic Geometry
Second Edition by John W. Cell, North Carolina State College
"the book is excellent. The author has presented the material from an original and un hackneyed viewpoint". 1951. 326 pages. $3.75.

A Study of Antimetabolites
By D. W. Woolley, Rockefeller Institute for Medical Research
This is the first complete study of the effects of antimetabolites upon living cells. 1952. 269 pages. $5.00.

Write today for on-approval copies of the books that interest you.

JOHN WILEY & SONS, Inc., 440 Fourth Avenue, New York 16, N. Y.
Capsule Summaries of 14 Forthcoming Books . . .

Introductory Mycology
By Constantine Alexopoulos, Michigan State College

Theoretical Nuclear Physics
By John M. Blatt, University of Illinois, and Victor P. Weisskopf, Massachusetts Institute of Technology

Experimental Nuclear Physics, Volume I
Edited by Emilio Segrè, University of California

Ultraviolet Radiation
By Lewis R. Koller, General Electric Company
 Designed to meet the needs of the non-specialist, covering sources and characteristics of ultraviolet radiation. June 1952. Approx. 270 pages. Prob. $7.50.

Principles of Geochemistry
By Brian Mason, Indiana University
 One of the first concise accounts of geochemistry, this book summarizes the significant facts and ideas. April 1952. 276 pages. $5.00.

Elementary Analysis
By Kenneth O. May, Carleton College
 Gives the reader a good grasp of the logical nature of mathematics, the algebra of numbers, analytical geometry, and the simple ideas of calculus by organizing its topics around a few significant ideas. April 1952. 635 pages. $3.00.

Inorganic Chemistry: An Advanced Textbook
By Therald Moeller, University of Illinois
 Pertinent information needed for a unified presentation of inorganic chemistry is here for the first time, combined into a single volume. August 1952. Approx. 918 pages. Prob. $10.00.

Essentials of Microwaves
By Robert B. Muchmore, Hughes Aircraft Company
 Explains the physical principles underlying the operation of all microwave devices. September 1952. Approx. 242 pages. Prob. $4.50.

Symposium on Radiobiology
The Basic Aspects of Radiation Effects on Living Systems
Edited by James J. Nickson, Cornell University School of Medicine
 The official record of an important symposium sponsored by the National Research Council. May 1952. Approx. 475 pages. Prob. $4.00.

Advanced Statistical Methods in Biometric Research
By C. R. Rao, Indian Statistical Institute

General Biology
Third Edition by Perry D. Strausbaugh, West Virginia University, and Bernal R. Weimer, Bethany College
 Revised to include new material and to present the subject in a more teachable way. April 1952. 813 pages. $6.00.

A New Manual for the Biology Laboratory
By Bernal R. Weimer, Bethany College, and Earl L. Core, West Virginia University
 Revised to put drawings with text and to leave more space for answers. Now perforated for two- and three-ring notebooks, etc. May 1952. Prob. $2.75.

Laboratory Manual for General Bacteriology
Fourth Edition by George L. Pulitzer, Carl E. Georgi, and Lawrence F. Lindgren, all at the University of Nebraska
 Keyed to the seven leading texts in general bacteriology, the new edition has been completely reorganized to keep abreast of scientific progress. April 1952. 293 pages. $3.50.

General Chemistry
Sixth Edition by H. G. Deming, University of Hawaii
 "Increased clarity, precision, and interest have been the goals in preparing this new edition of a book that first appeared nearly thirty years ago". April 1952. 656 pages. $5.75.

Write for the books that interest you and you'll receive approval copies as soon as they are published.

John Wiley & Sons, Inc. 440 Fourth Avenue New York 16, N. Y.

April 18, 1952
New and Recent Holt Books

A Textbook of Quantitative Analysis
ANDREW PATTERSON, JR. and HENRY C. THOMAS, Yale University
This teachable text will help the student to think in scientific terms. It offers a background of basic scientific fact and emphasizes throughout the fundamentals of stoichiometry and the principles of homogeneous and heterogeneous equilibrium. Each chapter concludes with a group of problems. Ready late April, 500 pages, $4.25

LILLIE'S Development of the Chick, Third Edition
Revised by HOWARD L. HAMILTON, The Iowa State College, Advisory Editor, B. H. Willier, The Johns Hopkins University
This classic text has been extensively revised, rewritten, and brought completely up to date to present a consecutive and comprehensive account of the development of the chick. The revision includes a new chapter on The Integument, many new figures, and 17 full-page plates showing a series of normal stages of the chick. Ready in April, About 550 pages, Probably $6.50

The Living Body, Third Edition
C. H. BEST and N. B. TAYLOR, University of Toronto
A basic text for the course in human physiology, now thoroughly revised. It includes a new introductory chapter on general chemical and physico-chemical principles, sixty new figures, and much new material on the latest advances in the field of physiology. Ready in April, About 600 pages, $5.50

Principles of Modern Biology, Revised Edition
DOUGLAS MARSLAND, New York University
A complete modernization of Charles R. Plunkett's Elements of Modern Biology, including the latest advances in biological research and a completely new chapter on Ecology and Evolution. 1951, 757 pages, $5.75

Manual of Biology, Parts I and II, Revised Edition
DOUGLAS MARSLAND, New York University
These manuals (Part I The Protozoa and the Plants, Part II The Metazoan Animals) have been brought up to date and completely revised. Ready in May, Part I—192 pages, $2.00; Part II—224 pages, $2.20

The Plant World, Revised Edition
HARRY J. FULLER, University of Illinois
The revision of this outstanding general botany text stresses the practical aspects of plant life. Much new material has been added. Over 400 illustrations. 1951, 769 pages, $4.75

College Botany
HARRY J. FULLER and OSWALD TIPPO, University of Illinois
This successful text for the full-year general botany course emphasizes the economic uses of plants. Adopted by over 200 colleges and universities. 1949, 993 pages, $6.25

Laboratory Manual for General Botany
WILSON N. STEWART, HARRY J. FULLER, and OSWALD TIPPO, University of Illinois. 1950, 62 pages, $1.40

HENRY HOLT AND COMPANY 383 Madison Avenue, New York 17
Krajian-Gradwohl's

HISTOPATHOLOGICAL TECHNIC
New Second Edition

Two important changes were made in the revision of this popular book: (1) Dr. R. B. H. Gradwohl, Director of Gradwohl School of Laboratory and X-ray Technique, St. Louis, has collaborated with Dr. Krajian who did the original work; and (2) Because the scope of the book was broadened with his contribution, the title has been changed from "Histological Technic" (1940) to "Histopathological Technic."

The work has been brought completely up to date and contains in addition to standard accepted methods, many very important original procedures not found in any other text on the subject.

By ARAM A. KRAJIAN, Sc.D. Formerly in Department of Pathology, Los Angeles County General Hospital, Los Angeles, Calif.; and R. B. H. GRADWOHL, M.D., Pathologist to Christian Hospital; Director, Gradwohl School of Laboratory and X-ray Technique, St. Louis. SECOND EDITION. 362 pages, 131 illustrations (7 in Color). Price, $6.75

Schaub-Foley's

DIAGNOSTIC BACTERIOLOGY
New Fourth Edition

All the advances in medical bacteriology have been thoroughly incorporated into one book for student and practitioner. The book has been completely revised and enlarged and much of it rewritten. Many of the procedures have been streamlined, and the authors have made use of new media and methods of differentiation and identification.

In this, its Fourth (1952) Edition, DIAGNOSTIC BACTERIOLOGY will serve an even wider field than before. In addition to its use in professional and technical classes, it will fulfill the original intention of the authors as a guide and reference book for the hospital or clinical bacteriologist, the public health bacteriologist, and the research bacteriologist.

By ISABELLE GILBERT SCHAUB, A.B., Technical Director, Clinical Bacteriology Laboratories, The Johns Hopkins Hospital, etc.; and M. KATHLEEN FOLEY, M.A., Instructor in Bacteriology, Department of Biological Sciences, College of Notre Dame of Maryland. FOURTH EDITION. 356 pages. Price, $4.50

Announcing . . .

How to Solve General Chemistry Problems
by C. H. SORUM, University of Wisconsin

This self-teaching book presents a carefully graded collection of 500 problems to be solved by the general chemistry student—complemented by textual matter which reviews the principles embodied in the problems, indicates methods of solution, and illustrates each problem type with a worked-out solution.

160 pages 5%" x 8%" paper bound  Published February 1952

Problems in Physical Chemistry
by LARS GUNNAR SILLEN, PAUL W. LANGE and CARL O. GABRIELSON

This book is the English translation of a text originally written in Swedish, which has been widely used in all the Scandinavian countries. It comprises a collection of over 800 PROBLEMS in physical chemistry, derived from published literature of the field, and complemented by CONCISE RESTATEMENTS OF THE THEORIES AND PRINCIPLES illustrated by the problems.

380 pages 5%" x 8%"  Published March 1952

Economic Botany
by ROBERT W. SCHERY, Washington University

Just published, for the first time a text presents an integrated, cultural approach to the plant-man relationship. Gives perspective to the study of the vegetable kingdom, discusses the sociological and moral factors behind this relationship. Text is organized into sections according to the part of the plant used. In each subgrouping, a typical specimen is chosen for careful exposition.

564 pages 7" x 10"  Published February 1952

Electromagnetics
by ROBERT M. WHITMER, Rensselaer Polytechnic Institute

Designed for a course in electricity and magnetism at the junior or senior level, this text approaches the subject from the standpoint of field theory; its use of the vector analysis notation makes possible more concise explanation of many topics.

International Review of Cytology

Edited by G. H. Bourne, The London Hospital Medical College and J. F. Danielli, King's College, London

Volume I, April 1952, xii, 368 pages, illustrated, $7.80

Research in cytology has recently been accelerated by the development of new techniques and the resultant wealth of material is too great for any individual to read in its entirety. Consequently there is now a need for review articles in far greater number than can be provided by any of the present review journals. This new Review devoted to cytology and cell physiology, which will appear annually, will thus fulfill an essential function.

Contents

The Review is an official organ of the International Society for Cell Biology.

Some Historical Features in Cell Biology
By ARTHUR HUGHES, Strangeways Research Laboratory, Cambridge

Nuclear Reproduction
By LEONARD HUSKINS, University of Wisconsin

Enzymatic Capacities and their Relation to Cell Nutrition in Animals
By GEORGE W. KIDDER, Amherst College

The Application of Freezing and Drying Techniques in Cytology
By L. G. E. BELL, King's College, London

Enzymatic Processes in Cell Membrane Penetration
By Th. ROSENBERG, Gentofte, Denmark, and W. WILBRANDT, University of Berne

Bacterial Cytology
By K. A. BISSET, University of Birmingham

Protoplast Surface Enzymes and Absorption of Sugar
By R. BROWN, University of Leeds

Reproduction of Bacteriophage
By A. D. HERSHEY, Carnegie Institution, Cold Spring Harbor, New York

The Folding and Unfolding of Protein Molecules as a Basis of Osmotic Work
By R. J. GOLDACRE, Chester Beatty Research Institute, London

Nucleo-Cyttoplasmic Relations in Amphibian Development
By G. FANKHAUSER, Princeton University

Structural Agents in Mitosis
By M. M. SWANN, Cambridge University

Factors Which Control the Staining of Tissue Sections with Acid and Basic Dyes
By MARCUS SINGER, Cornell University

The Behavior of Spermatozoa in the Neighborhood of Eggs
By LORD ROTHSCHILD, Cambridge University

The Cytology of Mammalian Epidermis and Sebaceous Glands
By WILLIAM MONTAGNA, Brown University

The Electron-Microscopic Investigation of Tissue Sections
By L. H. BRETSCHNEIDER, University of Utrecht

The Histochemistry of Esterases
By G. GOMORI, University of Chicago

PERSONNEL PLACEMENT

YOUR ad here reaches over 32,000 foremost scientists in the leading educational institutions, industrial laboratories, and research foundations in the United States and 76 foreign countries—at a very low cost

CLASSIFIED: 15¢ per word, minimum charge $3.00. Use of Box Number counts as 10 additional words.

DISPLAY: $17.50 per inch, no charge for Box Number.

Correct payment to SCIENCE must accompany all ads. Insertion usually made 2 or 3 weeks after receipt of ad.

SCIENCE 1515 Mass. Ave., N.W., Wash. 5, D. C.

POSITIONS WANTED

Bacteriologist-Immunologist: Ph.D., Three years director of research. Experienced in medical and surgical bacteriology, antibiotics, animal experimentation, hypersensitivity, tissue culture. Publications. Desires research position. Box 171, SCIENCE.

Biologist: Ph.D. in embryology, single, 28. Broad academic background. Two years experience teaching experimental course in general biology. Prefers teaching and research, West Coast. Box 166, SCIENCE.

Biologist: Ph.D. Seven years university teaching experience, Invertebrate, Vertebrate Anatomy, Embryology, Ecology. Desires east or west coast academic or industrial teaching position. Possibilities for marine research desirable, not mandatory. Box 177, SCIENCE.

Biologist, veteran, age 25, Master student evening session, well trained biological—biochemical radioisotope investigations, desires position where remuneration matches ability. Highest references; will relocate from New York. Box 176, SCIENCE.

Entomologist Zoologist, married family, Ph.D. Insect Physiology, Genetics, Biochemistry, Ecology, Forest Entomology. Good background Physical Sciences. Desires teaching or research position. Consider Junior college, small college. Three years University teaching experience. Box 172, SCIENCE.

Geneticist—Biophysicist—Zoologist, Ph.D., ten years of extensive teaching and research experience. Desires responsible teaching or research position. Box 170, SCIENCE.

Geneticist—Zoologist, Ph.D., married, 42. At present associate professor, liberal arts college. Desires teaching-research position, preferably in eastern state. Box 175, SCIENCE.

Position Wanted:
Physiologist: Ph.D., four years, associate professor, pharmacology, university Medical School; prefers professorship or associate; will consider research with well established pharmaceutical company; for further information, please write Science Division, Medical Bureau, Palmolive Building, Chicago.

Registered Professional Engineer, electrical and mechanical. Also member American Physical Society. Experienced in administration and management of very successful high grade research laboratory. Desires similar position with medical or other research organization where the diligent application of comprehensive basic engineering concepts will provide a substantial contribution. Box 180, SCIENCE.

Technical Librarian: 5 years experience in an industrial research library, medicine, chemistry, chemical marketing, literature and patent surveys, abstracting, library management. Box 169, SCIEN

Zoologist, woman, M.A., training and interests largely in Zoology. Fourteen years college teaching experience. Desires new academic association after June in embryology, comparative anatomy, histology, or general biology. Box 107, SCIENCE.

POSITIONS OPEN

Dalhouise University, Assistant Professor of Anatomy, Medical Faculty. Salary $3,750.00. Preference given to applicants with experience in neuroanatomy and micro-anatomy. Apply to H. G. Grant, M.D., Dean, The Faculty of Medicine, Dalhouise University, Halifax, Nova Scotia, Canada.
PERSONNEL PLACEMENT

POSITIONS OPEN

Educational Representative—To contact teachers in medical and allied schools, colleges and schools of nursing in Canada and Michigan, comprising provinces of British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, Quebec, New Brunswick, Nova Scotia, Newfoundland. College graduate 25–30 years old, science background and teaching experience preferred. Knowledge of French desirable but not required. This is a full-time, salaried position with all expenses paid. Write P.O. Box 416, Phila. 5, Penna. U.S.A.

Physiologist, Ph.D. or M.D. Research facilities available. Opening for assistant professor and instructor. Send complete information to Dr. E. V. Hawthorne, Head Dept. of Physiology, College of Medicine, Howard University, Washington, D. C.

Positions Open:
(a) Assistant Medical Director; duties include professional correspondence, clinical evaluation contacts; East. (b) Biochemist, Ph.D. under 35, to supervise clinical laboratories and develop more difficult diagnostic procedures; university medical center; South; minimum $6,000, percentage later. (c) Pharmaceutical Chemist or Pharmacologist for formulating appointment; should know production; pharmaceutical company; Midwest. (d) Assistant Professor or instructor in Physiology; M.D. or Ph.D. with training in medical or human Physiology; university medical school; South. (e) Chief, Industrial Health research department; Ph.D. or M.D. trained toxicology, clinical physiology, industrial health; duties include research, supervising staff of hygienists, research technicians; East. (f) Pharmacist qualified to serve as group leader, research in field of antibiotics; expansion program; one of major companies. S4-3 Science Division, Medical Bureau (Bur- neice Larson, Director) Palmolive Building, Chicago.

SCIENTISTS—salaried positions, $3,600 to $25,000. This confidential service for outstanding men who desire a change of connection, will develop and conduct preliminary negotiations without risk to present position. Send name and address for details.

Uricase
Dry stable preparation derived from kidney—more potent
than available commercial uricase preparations. It is
standardized, so that 5 mg. will catalyze the conversion
of one micromole of uric acid to non-chromogenic end
products in 90 minutes at 45° C.‡
‡ Also available—Cytochrome C, vials of 50 mg. (10cc).
Write for catalog listing other important biochemicals.
VIOBIN Laboratories • Monticello, Illinois
It's the patented Technicon syphon-cycle that does it. Twice every minute, seven fresh gallons of water are surged through the pipettes, loosening and dislodging clinging residues. Wastes are literally swept out by the violent suction set up during the brisk ten-second emptying phase of the cycle.

So rapid, so thorough is the Technicon Washer that six flushing cycles will deliver a full basket-load of immaculately clean pipettes (it holds up to 200 pipettes, 1 ml, 18” long). The non-corroding stainless steel basket carries its load of pipettes without changing through cleansing, washing and drying. Practically eliminates breakage and chippage because it requires no individual handling, no shifting from container to container. A MUST for the busy laboratory. Ask for Bulletin 6150 giving particulars.

You're looking at a load of soiled pipettes going into the Technicon Pipette Washer. Three minutes from now they'll be out again — but sparkling clean!
Science Teachers Report

A GREAT TIME SAVER IN TEACHING

THE AO SPENCER SCHOLAR'S MICROSCOPE

HOW THE AO No. 78 SCHOLAR'S MICROSCOPE CUTS TEACHING TIME

1. Easy to learn to use.
2. Single focusing control—fast and precise.
3. Factory-focused built-in light source eliminates time consuming and frequently faulty substage adjustments.
4. Reversed arm position gives clearer view of specimen stage, objectives, and diaphragm openings.

Since we are currently supplying both military and civilian needs, instrument deliveries cannot always be immediate.

- The reports keep coming in—yes, the AO Scholar's Microscope does save time in teaching students microscopy.

This radically new idea in microscopes has proven a boon to science teachers. The built-in light source assures permanently aligned illumination and consequently better optical performance with much less adjustment. Low overall height increases comfort in operation. Locked-in parts reduce maintenance costs. 'Spring-loaded' focusing mechanism protects slides against damage. See your AO distributor or write Dept. D3.
