Distinguished by its usefulness and clarity . . .

MALEIC ANHYDRIDE DERIVATIVES

By Lawrence H. Flett and William Howlett Gardner. New Products Division, National Aniline Division of Allied Chemical and Dye Corporation. In this book are gathered the characteristic reactions of one of the most versatile chemical compounds. Despite the many uses of maleic anhydride derivatives in the production of alkyl resins, maleinized drying oils, organic pigments, rubber, detergents, and many other products—these reactions have never before been brought together for the convenience of industrial chemists, researchers, and everyone else facing the problem of finding suitable chemicals to solve specific problems. The arrangement of the book is unique; each of the 116 different reactions is covered completely on two facing pages. Thus the reader can get all the essential information at a glance, without distracting page-flipping. 1952. 269 pages. $6.30.

15 experts cover all major phases of . . .

INSECT PHYSIOLOGY

Edited by Kenneth D. Roeder, Tufts College. Written by outstanding men in the field, this is the first American book presenting most of the known physiological characteristics and research potential of insects. Each chapter is written by a specialist who is actively engaged in the research about which he writes. Thoroughly accurate and up-to-date, the book contains much entirely new information in addition to systematizing, classifying, and criticizing most of the work which has previously appeared in research papers on insect physiology. Many of the sections constitute monographs in their own right on phases of insect physiology which have never been reviewed in any journal or book. Valuable information has been included on the evaluation, development, and use of insecticides. Ready in December. Approx. 998 pages. Prob. $15.00.

New material on experimental design . . .

METHODS of STATISTICAL ANALYSIS

Second Edition

By Cyril H. Courn, Chief of the Cereal Division, Central Experimental Farm, Ottawa, Canada. Written by a man who first began the study of statistics with a view to its application in increasing the efficiency of plant breeding—this book covers the general field of applied statistics with a pronounced emphasis on experimental design. Detailed methods for the statistical analysis of experiments of basic designs are given to equip the reader with a firm command of underlying principles. The applications and illustrations are drawn largely from agricultural research where the author has had extensive experience. A Wiley Publication in Statistics. Walter A. Shephard, Editor. 1952. 467 pages. $7.50.

The first book in twenty years on . . .

COMETS and METEOR STREAMS

By Dr. J. A. Porter, Principal Scientific Officer, H. M. Nautical Almanac Office; Editor, Observatory Magazine. This work combines modern knowledge on comets and meteors, with emphasis on the orbits of these bodies. It forms a link between the descriptive treatment and a more specialized treatise on orbits. Simple computing techniques are presented, and a full bibliography enables the reader to extend his studies if required. Much of the data on comets is new, as are some of the methods of dealing with meteors. Extensive knowledge of mathematics is not required. A publication in the International Astrophysics Series. 1952. 121 pages. $5.25.

Surveys an exciting new branch of astronomy . . .

RADIO ASTRONOMY

By Bernard Lovell, and J. A. Clegg. In this book the authors give an account of the most important aspects of the new science of radio astronomy, which has emerged since World War II, out of the application of radio and radar techniques to problems of the upper atmosphere. The book is written to have the widest possible interest, and embraces meteor observations, solar observations, galactic noise, and the electronics methods and formulae involved. 1952. 238 pages. $4.00.

October 10, 1952
AN INTRODUCTION TO SCIENTIFIC RESEARCH
By E. Bright Wilson, Jr., Harvard University. 365 pages, $6.00
An exceptionally valuable book for graduate and research students in any branch of science. It is a text and guide to the scientific methods which underlie all valid research. Material is not limited to any one science but is rather intended to be applicable to wide areas; however, emphasis is on practical, specific topics rather than vague generalities.

PRINCIPLES OF INVERTEBRATE PALEONTOLOGY. New 2nd Edition
By Robert R. Shrock, Massachusetts Institute of Technology; and W. H. Twenhofel, University of Wisconsin. McGraw-Hill Series in Geology. Ready in November
One of the most complete and systematic treatments of invertebrate fossils yet published, this text discusses twenty-one phyla of invertebrates. A short chapter is devoted to conodonts. Considerable emphasis is placed on the morphology of soft parts, the architecture and structure of the hard parts, and the relations of the latter to the former.

WRITING THE TECHNICAL REPORT
Long recognized by teachers everywhere as one of the best organized and most teachable textbooks in its field, this work explains clearly and convincingly the underlying principles of report writing, constantly stresses the fundamentals of organization, and avoids overdevelopment of the details of technique. Writing the Technical Report develops right attitudes and sound judgments as well as establishing critical standards which the student may apply to test the effectiveness of his own work.

MICROMETEOROLOGY: A Study of Physical Processes in the Lowest Layers of the Earth’s Atmosphere
By O. G. Sutton, Military College of Science, Shrivenham, England. Ready in October
This book is concerned with the special branch of meteorology relating to air layers near the ground. Its purpose is to give the reader a general account of the properties of these layers, and also to provide training in the specialized techniques which have been evolved to solve problems arising in agricultural meteorology, hydrology, air pollution, etc. It gives both the theoretical basis and the practical methods.

Associate Laboratory Director for city health department laboratory. Graduate of approved medical school. Require special knowledge of diagnostic bacteriology, serology, chemistry, and experience in administration. Salary depends on qualifications and experience. Write: Herbert R. Morgan, M.D., Director, Rochester Health Bureau Laboratories, Strong Memorial Hospital, Rochester, New York.

Professor of Physiology. Applications are requested for the position of Head of the Department of Physiology in a young progressive Medical School in Canada. Teaching and Research experience should be explained in the application. Applicants with M.D. degree preferred. Write full details (adding reprints of publications) to Box 299 SCIENCE.

Senior Literature Scientist with supervisory responsibilities: position involves responsibility for directing work of scientific staff in literature research conducting clinical and pre-clinical fields. Ph.D. in microbiology with strong biochemical background. Some experience in scientific literature searching desirable. Age 35 or over. Male. Eastern metropolitan area. Excellent working conditions and facilities. Liberal employee benefits. Salary open. Send complete details. Box 301, SCIENCE.

LOOK AROUND... notice the increasing number of satisfied advertisers using small-space ads regularly in practically every issue of SCIENCE—proof that these small ads get results! If you have a product or service of interest to scientists, why not take advantage of this low-cost means of increasing your profits? See above for rates & information.

1953 ARCTIC RESEARCH GRANTS

The Arctic Institute of North America is offering a number of research grants in 1953 for scientific investigations dealing with arctic and subarctic regions. Research must include field investigations in North America or studies at one of the Institute offices. Completed applications must be received by 1st December 1952. Application forms may be obtained from: Arctic Institute of North America, 1500 P Street, N.W., Washington 5, D. C., or 3485 University Street, Montreal 2, Canada.

### APPLICATION FOR HOTEL RESERVATIONS

**119th AAAS MEETING**

**St. Louis, Mo., December 26-31, 1952**

The list of hotels and their rates and the reservation coupon below are for your convenience in making your hotel room reservation in St. Louis. Please send your application, *not* to any hotel directly, but to the AAAS Housing Bureau in St. Louis and thereby avoid delay and confusion. The experienced Housing Bureau will make assignments promptly; a confirmation will be sent you in two weeks or less. **Share a room with a colleague if you wish to keep down expenses.** Mail your application *now* to secure your first choice of desired accommodations. All requests for reservations must give a definite date and estimated hour of arrival, as well as date and approximate hour of departure.

Much of your Long Distance telephone system works through cable but open-wire lines are still the most economical in many places. Thousands of these circuits are so short that little would be saved by using elaborate carrier telephone systems which are better suited for long-haul routes. But a new carrier system . . . the Type O designed especially for short hauls . . . is changing the picture. It is economical on lines as short as 15 miles. With Type O thousands of lines will carry as many as 16 conversations apiece.

Type O is a happy combination of many elements, some new, some used in new ways. As a result, terminal equipment takes up one-eighth as much space as before. Little service work is required on location; entire apparatus units can be removed and replaced as easily as vacuum tubes.

Moreover, the new carrier system saves copper by multiplying the usefulness of existing lines. For telephone users it means more service . . . while the cost stays low.

Improving telephone service for America provides careers for creative men in scientific and technical fields.
Uniform Serial Sectioning with the AO No. 815 Rotary Microtome

For a medium size microtome with all the accuracy and mechanical advantages for which AO Spencer Microtomes have long been famous — choose the popular No. 815 Rotary Microtome. Uniform serial sections may be cut from two to forty microns in thickness. Total excursion of the feed is 22mm. Improved ball and flange object clamp holds the block rigidly and may be oriented in any desired plane. A precision-edged, highest quality steel knife is supplied complete with back and handle for sharpening. Ask your AO distributor to show you the No. 815 Microtome, or write Dept. K2.
