A milestone in scientific biology . . .

PROBLEMS of LIFE

An Evaluation of Modern Biological Thought. By LUDWIG VON BER-TALANFFY, University of Ottawa, formerly of the University of Vienna. Written in a lucid style uncrowded by technicality, this book draws a clear picture, fascinating for both biologist and non-biologist—of the present situation in scientific biology. Here is a thorough and logical survey of basic biological problems within the framework of the organismic conception. Bertalanffy demonstrates the applicability of the holistic-dynamical view in all realms from the microphysical to the psychological. The book covers modern conceptions in the various levels of organization from high-molecular and colloid chemistry to viruses and genes—to cytology and histology—to applied biology and the supra-individual units of life. The author outlines the impact of the organismic concept on embryology, morphology, genetics, evolution, behavior, medicine, psychology, philosophy, etc. Based entirely on the results of concrete research, the treatment exposes the implications of the organismic theory in a re-evaluation of those basic characteristics of life which as yet have been regarded the domain of vitalistic agents. Available now. 216 pages. $4.00.

VOLUME 32 OF ORGANIC SYNTHESSES

Editor-in-Chief, RICHARD T. ARNOLD. Editorial Board: T. L. CAIRNS, JAMES CARAN, ARTHUR C. COPE, W. S. JOHNSON, NELSON J. LEONARD, CHARLES C. PRICE, R. S. SCHREIBER, NORMAN RABJOHN (secretary to the Board). Plus 61 contributors. This latest volume in the series designed to lighten the load of the organic chemist includes 42 new syntheses. Outstanding organic chemists throughout the country have double-checked these preparations for accuracy and feasibility. Available now. 119 pages.

MALEIC ANHYDRIDE DERIVATIVES Reactions of the Double Bond

By LAWRENCE H. FLETT and WILLIAM HOWLETT GARDNER, both of the New Products Division, Allied Chemical and Dye Corporation. A valuable collection of types of reactions of one of the most versatile of chemical compounds. The information presented could be found only by an exhaustive survey of the chemical literature. The majority of the reactions are illustrative of the chemistry of the double bond, which is basic to the synthesis of so many of our important industrial organic chemicals. Each reaction is confined to two open pages that graphically describe a particular type of preparation—how the product is made, what it is like, and for what it may be used. The compactness of the presentation of each type of reaction highlights the chemistry involved and gives the reader at a glance an idea of how such reactions might be employed in his work. 1952. 269 pages. $6.70.

Introduction to the FOUNDATIONS of MATHEMATICS

By RAYMOND L. WILDER, Research Professor of Mathematics, University of Michigan. This book provides an effective stimulant to creative and original thinking. It treats mathematics not as a discipline to be accepted without question of source and validity; rather it inquires critically into the nature of this subject and the foundations upon which it is built. The book examines these important topics: the source and evolution of mathematical concepts and mathematical existence; the nature and importance of the contradictions and paradoxes, and methods of avoiding them; the origin and growth of various present day foundations theories—theories such as those based on the Zermelo axioms, the methods of symbolic logic, Intuitionism, etc.; and the position of mathematics as a branch of human knowledge. Ready in November. Approx. 296 Pages. Prob. $6.00.

Order your on-approval copies today.

The Sea Around Us
By RACHEL L. CARSON
author of Under the Sea-Wind
"When poets write about the sea their errors annoy scientists. When scientists write about the sea their bleak and technical jargon paralyzes poets. Yet neither scientists nor poets should object to The Sea Around Us. It is written with precision more than sufficient for its purpose, and its style and imagination make it a joy to read."—N. Y. Times Book Review.
The Sea Around Us has been a national bestseller for 66 consecutive weeks. Isn't it time you read it? $3.50

The Theory Of Relativity
By C. MÖLLER. A complete exposition of the classical, special and general theory of relativity, explained in terms of a three-dimensional vector calculus, as well as in the traditional four-dimensional formulation. The book is presented in a form suitable for immediate application and is therefore particularly valuable for research workers. 18 text figures. $7.00

Hyperconjugation
By J. W. BAKER. A coherent review of the phenomenon of hyperconjugation and the physical and chemical evidence in support of the concept, illustrating its increasing theoretical importance in the field of organic chemistry. 4 text figures. $3.50

For PROOFS on display ads, copy must reach SCIENCE 4 weeks before date of issue (Friday of every week).

POSITIONS WANTED

Biochemist: Ph.D. Two years industrial experience in nutritional biochemistry. Research seeks academic position or non-research position in industry. Box 297, SCIENCE. 10/17, 10/24

Biochemist, Ph.D.: Medical College, 1952, on post-doctoral fellowship. Desires research or academic position in biochemistry or pharmacology, starting July, 1953. Pre-doctoral training and employment in organic and physical chemical research. Box 310, SCIENCE.

Chemist: Ph.D. (training), June 1952. Diversified background including biological sciences, forensic toxicology, and three years' university research on problems related to medical field. Academic or industrial research desired. Box 305, SCIENCE. 10/31

Clinical Psychologist, Ph.D., 28, 5 years' experience. Psychoanalytic training. Projection testing. Desires private practice with psychiatrist, teaching or institutional work. New York, New Jersey or Conn. Box 304, SCIENCE. 10/31

Positions Wanted:
(a) Biochemist; Ph.D.; since 1945, director development and distributor of plasma and liver fractions, pituitary factors for animal experimentation, purified enzymes; broad research experience.
(b) Physiologist; Ph.D.; five years' research associate and on faculty, Eastern university; interested industrial research, administrative responsibilities. For further information, please write Science Division, Medical Bureau (Burnell Larson, Director), Palmolive Building, Chicago.

Recent graduate M.S.A., major plant pathology, mycology, wide Botanical and Agricultural training, desires position where training can be utilized. Will locate overseas. Box 306, SCIENCE.

Well-known comparative anatomist, at present assistant professor in medical school, seeks position in college, medical school or industry offering better opportunities. Box 311, SCIENCE.

POSITIONS OPEN

Inorganic Chemists—middle size Chemical Co. with Research Laboratories in Philadelphia area requires inorganic chemists at several job levels. M.S. or equivalent experience is minimum qualification. Work will emphasize wide range of inorganic preparations rather than analytical or physical chemistry. Please write Box 307, SCIENCE. 10/11, 11/7

Assignments:
Potential
X

Positions Open:
(a) Medical Director; foreign division, important pharmaceutical company; young physician who has lived in Latin America preferred. Duties include four months' travel.
(b) Biochemist; preferably physician, Ph.D., eligible to head division, new general hospital, 500 beds; East; (c) Pharmacologist; full-time teaching; research, graduate school program; rank dependent qualifications; $6000-$8000.
(d) Bacteriologist-Immunologist of considerable research background, research program, university college
(e) Biochemist; M.S. or Ph.D., to supervise biochemical laboratory, 300-bed hospital; university city, Midwest, $2500.

1953 ARCTIC RESEARCH GRANTS

The Arctic Institute of North America is offering a number of research grants in 1953 for scientific investigations dealing with arctic and subarctic regions. Research must include field investigations in North America or studies at one of the Institute offices. Completed applications must be received by 1st December 1952. Application forms may be obtained from: Arctic Institute of North America, 1505 P Street, N.W., Washington 5, D. C., or 3485 University Street, Montreal 2, Canada.

APPLICATION FOR HOTEL RESERVATIONS
119th AAAS MEETING
St. Louis, Mo., December 26-31, 1952

The list of hotels and their rates and the reservation coupon below are for your convenience in making your hotel room reservation in St. Louis. Please send your application, not to any hotel directly, but to the AAAS Housing Bureau in St. Louis and thereby avoid delay and confusion. The experienced Housing Bureau will make assignments promptly; a confirmation will be sent you in two weeks or less. Share a room with a colleague if you wish to keep down expenses. Mail your application now to secure your first choice of desired accommodations. All requests for reservations must give a definite date and estimated hour of arrival, as well as date and approximate hour of departure.

LABORATORIES wishing to enter the field of radioactivity with a minimum of capital outlay will find the new Tracerlab SC-19 Utility Scaler the ideal instrument.

The Utility Scaler features eight electronic scales-of-two, which give a scaling factor of up to 256, followed by a mechanical register totalizing 9999 counts. A scale selector switch makes it possible to by-pass some of the scales and thus allows the choice of scaling factors of 32, 64, 128 and 256. Predetermined counts ranging from 320 to 256,000 may be selected by means of the preset count switch which will stop the register at 10, 100 or 1,000.

With a resolving time of 10 microseconds, counting rates of up to 60,000 CPM result in less than 1% coincidence loss. The maximum counting rate of the Utility Scaler register is 1,000 CPM. The high voltage power supply is variable from 500 to 2000 volts and is so regulated that a 1% change in line voltage causes only 0.1% change in high voltage.

Science Teachers Report

A GREAT TIME SAVER IN TEACHING

THE AO SPENCER SCHOLAR'S MICROSCOPE

HOW THE AO No. 78 SCHOLAR'S MICROSCOPE CUTS TEACHING TIME

1. Easy to learn to use.
2. Single focusing control—fast and precise.
3. Factory-focused built-in light source eliminates time consuming and frequently faulty substage adjustments.
4. Reversed arm position gives clearer view of specimen stage, objectives, and diaphragm openings.

Since we are currently supplying both military and civilian needs, instrument deliveries cannot always be immediate.

- The reports keep coming in—yes, the AO Scholar's Microscope does save time in teaching students microscopy.

This radically new idea in microscopes has proven a boon to science teachers. The built-in light source assures permanently aligned illumination and consequently better optical performance with much less adjustment. Low overall height increases comfort in operation. Locked-in parts reduce maintenance costs. ‘Spring-loaded’ focusing mechanism protects slides against damage. See your AO distributor or write Dept. K4.
