Class L sensitization provides reasonably uniform sensitivity throughout the entire range from 240 to 900 mμ. It has found wide use for preliminary surveys in spectrographic analysis.

Class F sensitization is valuable for its high sensitivity in the red up to 680 mμ and for its uniform response over the whole visible spectrum.

Class O represents the unmodified color sensitivity of silver halide, which has a sharp cutoff just above 550 mμ. It is available in all emulsion types, including one that can resolve 1,000 lines per millimeter.

To capture the light you want . . .

This is the iron arc spectrum as seen on three different Kodak Spectroscopic Plates, each with a spectral sensitivity suited to a particular purpose.

Kodak Spectroscopic Plates and Films come in 18 different kinds of spectral sensitization. There are 10 different emulsion types to take these sensitizations, varying in speed, contrast, and granularity. There are even two emulsion types for the very low light levels where the reciprocity between illumination and exposure time otherwise falls off.

Whether your interest lies in spectroscopy, astronomy, or nuclear physics; in studies of luminescence, emission, absorption—you'll find it helpful to have the booklet which serves as a guide to the plates, films, and pellicles we make for you. It's called "Kodak Sensitized Materials for the Scientific and Industrial Laboratory," and we shall be happy to send you a copy without charge. Eastman Kodak Company, Industrial Photographic Division, Rochester 4, N. Y.

SPECTROGRAPHY

. . . an important function of photography
PITUITARY-ADRENAL FUNCTION

published February 1951
2nd printing June 1951

6 x 9 inches, illustrated, clothbound, 224 pages—$4.00
Price to AAAS members for prepaid orders—$3.50

PITUITARY-ADRENAL FUNCTION continues the AAAS tradition of presenting in book form the collected papers presented at symposium programs of wide interest. This volume includes 22 papers delivered at a two-day Symposium on the Adrenal Cortex at the AAAS meeting in New York City, December 1949.

PITUITARY-ADRENAL FUNCTION assembles important contributions of a score of laboratories in the United States and Canada from which many of the recent major advances in pituitary-adrenal physiology and therapeutics have come, and includes studies on the regulation of adrenal cortical activity, the role of the cortical hormones in protein, carbohydrate, and mineral metabolism, and effects of the cortical steroids and the ACTH in various disease states. A summary chapter on "Adrenolescence" by Dr. George Perera forecasts some of the possible future trends in this active field of endocrine research.
A NEW MOSBY BOOK!

NEW NINTH EDITION

Turner's
PERSONAL AND COMMUNITY HEALTH

In Progressing to its Ninth Edition, you can safely assume that Turner's PERSONAL AND COMMUNITY HEALTH has what it takes to satisfy the student in this rapidly advancing science of health knowledge—and that it has overcome many difficulties for the instructor. The book has been used widely and with satisfaction in many schools in courses in Hygiene and Health—and we are proud to announce publication of the book in its Ninth Edition—fully revised and brought up to date.

Turner's book is written for various college-level groups. It presents the essential, present-day knowledge of personal and community health with enough anatomy, physiology, and other underlying sciences to clarify and support the health teaching. The text material is brief and interesting and the book is rich in illustrations. The discussion of normal function is limited to those facts which are needed in order to know what to expect from the body and how to take care of it.

Turner's experience in health instruction is evident throughout the book. He has for many years lectured to college men and women and to students in schools of public health, medicine, dentistry, engineering—to teachers, nurses, dental hygienists—and to various age levels in the public schools. This kind of experience develops the realization of the importance of health instruction—and the new Ninth Edition of his book contains the most modern concepts of his subject.

PART I covers "Personal Health" and PART II, "Community Health"—and the very difficult problem of including both fields in one book is handled as only one thoroughly versed in both can do it. His approach is positive and sure and he writes with ease and dignity—expressing the knowledge necessary for good health with understanding for those who will be charged with setting the standards for living in our modern civilization.

By C. E. TURNER, A.M., Ed.M., D.Sc., Dr. P.H. Professor of Public Health Emeritus, Massachusetts Institute of Technology; Consultant in Health Education, World Health Organization; Formerly Associate Professor of Hygiene in the Tufts College Medical and Dental Schools, etc. 660 pages, illustrated. Price, $4.25.

Direct orders and inquiries to 3207 Washington Blvd., St. Louis 3, Missouri.

Written from the point of view of the practicing analytical chemist . . .

**QUANTITATIVE ANALYSIS: Elementary Principles and Practice**

By HARVEY DIEHL, Iowa State College, and G. FREDERICK SMITH, University of Illinois. This new book gives the reader a thorough grounding in chemical analysis, placing equal emphasis on theory and practice, and stressing a sound knowledge of descriptive chemistry. *Quantitative Analysis* treats several new procedures, including two of the most useful methods of analysis discovered in recent years—the versene method for determining the hardness of water, and the bathophenanthrol ine method for determining iron in water. It also contains a thoroughly modern chapter on colorimetry, giving this subject equal rank with gravimetric and volumetric analysis. 1952. 539 pages. $5.00.

From frequency distributions to non-linear regression . . .

**The METHODS of STATISTICS, Fourth Edition**

By L. H. C. TIPPETT, British Cotton Industry Research Association. This volume explains the basis of practically all the methods of statistics in use today. It includes many practical examples to illustrate these statistical techniques. Helpful tables and charts are provided to make the suggested methodology readily workable and practical. *One of the Wiley Publications in Statistics*. Walter A. Shewhart, Editor. 1952. 395 pages. $6.00.

New edition of the most quoted reference in the field . . .

**APPLIED INORGANIC ANALYSIS, Second Edition**

With Special Reference to the Analysis of Metals, Minerals, and Rocks. By the late W. F. HILLEBRAND, the late G. E. F. LUNDELL, H. H. BRIGHT, and J. I. HOFFMAN, all of the National Bureau of Standards. The aim in this edition is to describe methods of separation and determination that have proved to be of value, or that promise to have value, in applied inorganic analysis, rather than to list or describe methods that are of such limited application that their use is practically confined to tests of pure salts. The authors provide comprehensive information on quantitative separations and methods for determining the chemical elements. Ready in December. Approx. 997 pages. Prob. $15.50.

A stimulant to creative thinking in mathematics . . .

**INTRODUCTION to the FOUNDATIONS of MATHEMATICS**

By RAYMOND L. WILDER, University of Michigan. A critical inquiry into the nature of mathematics and the foundations upon which this science is built. The author provides information regarding principles and methods indispensable for an understanding of modern mathematics. The axiomatic method, theory of sets, number systems, and basic algebraic notions are scrutinized. The book also examines these important topics: the source and evolution of mathematical concepts and mathematical existence; the origin and growth of various present day foundations theories—the Zermelo axiom, the methods of symbolic logic, Intuitionism, etc.; and the position of mathematics as a branch of human knowledge. 1952. 305 pages. $3.75.

PERSONNEL PLACEMENT

YOUR ad here reaches over 32,000 foremost scientists in the leading educational institutions, industrial laboratories, and research foundations in the U. S. and 76 foreign countries—at a very low cost.

Classified: 18¢ per word, minimum charge $3.60. Use of Box Number counts as 10 additional words.

Display: $19.50 per inch, no charge for Box Number.

Correct payment to SCIENCE must accompany all ads. Insertion usually made 2 or 3 weeks after receipt of ad.

SCIENCE 1515 Mass., Ave., N.W., Wash. 5, D. C.

POSITIONS WANTED

Biochemist—Enzymologist, Ph.D., 33, Canadian, family. Seven years’ research experience in microbial metabolism, bacterial variation and enzyme formation. Two years’ teaching. Strong background Organic Chemistry and Genetics. Publications. Available January 1953. Desires position in industrial research or development. Box 315, SCIENCE.

Pharmacologist—Ph.D.—5 years’ teaching experience. Desires academic position which will permit completion of medical training on part-time basis. Box 316, SCIENCE.

Positions Wanted:

(a) Medical Editor; A.B., eastern university; twelve years’ experience with two of leading publishing companies.

(b) Pharmacologist; Ph.D.; five years’ associate professor pharmacology, medical school; five years’ chief, pharmacological research.

POSITIONS OPEN

Inorganic Chemists—middle size Chemical Co. with Research Laboratories in Philadelphia area requires inorganic chemists at several levels. M.S. or equivalent experience is minimum qualification. Work will emphasize wide range of inorganic preparations rather than analytical or physical chemistry. Please write Box 307, SCIENCE.

Positions Open:

(a) Immunochemist or Biochemist skilled in chemical fractionation of proteins and purification of these fractions; research associate; allergy group; university medical college.

(b) Neurophysiologist, Ph.D., competent with electronic gear, familiar with electrical properties of nervous system; medical school appointment. (c) Toxicologist; assistant directorship, new laboratory established for toxicological investigation of organic compounds; East (d) Instructor, elementary courses Biochemistry, Physiology, Anatomy; duties teaching employees of industrial company; products mainly in field of nutrition; Midwest. S11-1 Science Division, Medical Bureau (Burneice Larson, Director) Palmolive Building, Chicago.

Research Assistantships: Ph.D. candidates in chemistry and M.S. candidates in Chemistry, Electrical Engineering (Electronics). Chemical Engineering, Physics and Geology are wanted by a South-Western State University. These positions provide part-time research duties with time for academic work toward advanced degrees. Stipends are up to $2,150 for 12 months. Non-resident fees are waived. Box 308, SCIENCE.

1953 ARCTIC RESEARCH GRANTS

The Arctic Institute of North America is offering a number of research grants in 1953 for scientific investigations dealing with arctic and subarctic regions. Research must include field investigations in North America or studies at one of the Institute offices. Complete applications must be received by 1st December 1952. Application forms may be obtained from: Arctic Institute of North America, 1330 P Street, N.W., Washington 5, D. C., or 3485 University Street, Montreal 2, Canada.

SAF-T-GRIP
BEADED EDGE

MICROSCOPE SLIDES
NON-CORROSIVE
NON-FOGGING

- Smooth, diamond-processed beaded edge—won't slip or slip from hand—eliminates cuts from sharp edges.
- Made from water-clear glass—entirely free from flaws—guaranteed non-corrosive.
- Available in two types—plain or with frosted end.
- Economical—Saf-T-Grip slides cost even less than ordinary sharp-edged slides.

And now a special Blood Smear Slide is included in every box FREE.

Write for prices, further information and samples.

GET YOUR ADVANCE COPY
of the General Program-Directory
of the St. Louis Meeting of the AAAS
By first class mail — early in December

The General Program-Directory of the 119th Meeting of the AAAS in St. Louis, December 26-31, 1952, will be available to anyone, at cost, within the first week in December—whether he can attend the Meeting or not. This year the General Program will be much simplified in format and the Directory content increased. You will want it for your reference shelf.

Program content
2. Programs of the 18 AAAS sections and subsections (symposia and contributed papers).
3. Programs of the more than 30 participating societies.
4. The Special Sessions: AAAS, Academy Conference, Conference on Scientific Manpower II, National Geographic Society, Phi Beta Kappa, RESA, Sigma Xi.
5. Details of the Kiel Auditorium, downtown hotels, Washington University.
6. Titles of the latest scientific films to be shown in the AAAS Science Theatre.
7. Exhibitors in the 1952 Annual Exposition of Science and Industry and descriptions of their exhibits.

Directory content
1. AAAS officers and staff for 1952.
2. Complete roll of AAAS presidents and their fields.
3. The 236 affiliated organizations.
6. AAAS Awards and Grants—including all past winners.
7. Membership figures by sections.
8. Section committees (Council members) in detail.
9. Local committees.
10. Future Meetings of the AAAS.

Advance Registration
Advance registration—if you can attend the Meeting—has these advantages: 1) You avoid delay at Registration Desks upon arrival; 2) You receive the General Program-Directory in ample time, unhurriedly, to decide among events and sessions you particularly wish to attend; 3) Your name is posted in the Visible Directory as the Meeting opens.

The coupon below may be used both by advance registrants and by those who wish only the advance copy of the General Program-Directory.

--- THIS IS YOUR COUPON FOR AN ADVANCE COPY OF THE GENERAL PROGRAM-DIRECTORY ---

1a. □ Enclosed is $2.50 for my advance Registration Fee which brings me the Program-Directory, Convention Badge, and all privileges of the Meeting.

1b. □ Enclosed is $1.50 for only the Program-Directory. (If you should attend the Meeting, later, Badge and privileges may be secured for $1.00 more.)

This electronic nose sniffs out leaks.

Starting electronic nose on its way. It is pulled from pole to pole by line extending toward the ground. Previously workmen had to paint the cable with soap solution, so bubbles would disclose leaks.

For test, the cable is cleared of protective nitrogen or air, and filled with Freon gas. Case at left collects escaping gas which operates Freon-sensitive detector underneath. At points where Freon escapes through sheath cracks, the box at right—a combined control unit and power supply—rings a bell. Workmen mark the point of leak for later repair.

After years of buffeting by the wind, even tough telephone cable sometimes shows its age. Here and there the lead sheath may crack from fatigue or wear through at support points. Before moisture can enter to damage vital insulation, leaks must be located and sealed.

To speed detection, scientists at Bell Laboratories constructed an electronic nose which sniffs out the leaks. Using an electrically operated element developed by the General Electric Company, the device detects leaks of as little as 1/100 cubic foot per day. Sheath inspection can be stepped up to 120 feet per minute.

Thus Bell scientists add findings in other fields to their own original research in ways to make your telephone system serve you better. On the other hand their discoveries are often used by other industries. Sharing of scientific information adds greatly to the over-all scientific and technological strength of America.

Bell Telephone Laboratories

Improving telephone service for America provides careers for creative men in scientific and technical fields.
**Problem:** To tell if water is polluted

**Answer:** The water your child swims in, or the food you give your family can be "safe" or "unsafe." One thing Public Health Departments must have to label food or water correctly is an accurate count of bacteria in the samples. American Optical has developed an improved Darkfield "Colony Counter," which makes the bacteria colonies in samples of food or water show white...and without glare...on a dark background. Bacteria counting can now be easier, more positive, and much less tiring.

**Problem:** To detect people who can't tell red from green

**Answer:** Red and green look alike to some people. These people can be in danger as pedestrians, drivers or in certain jobs. To screen out those who can't or won't tell their weakness, American Optical offers intricate charts of different-colored spots. Normal eyes will see a numeral among the colors; but color-deficient eyes will see either a different numeral or none at all.

**Problem:** A remote-control microscope for atomic research

**Answer:** How can a man look at "hot" radioactive materials under a microscope when nuclear rays can kill at three feet? For General Electric, American Optical has built a photomicroscope which combines periscope, camera, and lighting. This instrument can be controlled and used through three feet of protective concrete, which completely blocks radiation. Write us about your development problems. Please address American Optical Company, 90 Vision Park, Southbridge, Massachusetts.
