Improved Model

International Refrigerated Centrifuge

The New International Model PR-1 Portable Refrigerated Centrifuge embodies the many time-proven features found in previous models and, in addition, incorporates important engineering improvements. The result is superior performance in the laboratory without increase in cost.

- A new type of temperature controller enables the user to pre-select the operating temperature within the Centrifuge chamber. Temperature is controlled within ±1°C and indicated on a calibrated dial.

- An autotransformer speed controller is provided with alternating current models, eliminating heating associated with the rheostat type of controller, and providing uniform, stepless speed control throughout the entire range.

- A new hinged panel provides easy access to all instruments and electric controls, thus facilitating maintenance.

- A hermetically sealed unit is substituted for the open type compressor heretofore used. This eliminates troublesome vibration caused by the action of the compressor and minimizes the possibility of gas leakage.

- Interchangeable accessories are available in wider variety, enhancing the usefulness of the Centrifuge.

INTRODUCTION TO ELECTRON MICROSCOPY
Compact and up to date, this text on the theory and uses of the electron microscope includes an outline of elementary electron optical theory, discussions of the construction and properties of electron lenses and electron microscopes, the interactions of electrons with matter, and the characteristics of electron images.

FUNDAMENTALS OF ELECTRONIC MOTION
A theoretical, mathematical treatment of electron-tube analysis, this text is written primarily for the user rather than the designer of electron tubes. It teaches the basic laws governing the motion of electrons and the means by which the collective effect of these motions appears as a tube coefficient such as input admittance or mutual conductance.

A LABORATORY MANUAL OF EXPERIMENTS IN PHYSICS. New 6th Edition
By Leonard R. Ingersoll, University of Wisconsin, Miles J. Martin, General Electric Research Laboratory, and Theodore A. Rouse, University of Wisconsin. Ready for fall classes
Thoroughly revised, this excellent, flexible manual for introductory college physics courses has been modernized and greatly improved. It contains much more material in the 77 experiments provided than can be used in one course, allowing the instructor to select a specific list to fit any requirements based on student interest, equipment available, and level of difficulty.

By Henry Margenau and W. W. Watson, Yale University; and C. G. Montgomery. Ready for fall classes
This careful revision of a very successful text brings the book completely up-to-date in all respects and adds many new and improved problems. Important changes are seen particularly in chapters on electricity and magnetism which now offer much greater clarity and teachability with a simplified treatment.

PERSONNEL PLACEMENT

YOUR ad here reaches over 30,000 scientists in the leading educational institutions, industrial laboratories, and research foundations in 77 countries—at a very low cost.

CLASSIFIED: 18¢ per word, minimum charge $3.60. Use of Box Number counts as 10 additional words.

DISPLAY: Rates listed below—no charge for Box Number.

Monthly invoices will be sent on a charge account basis—provided that satisfactory credit is established.

Single insertion $19.50 per inch
7 times in 1 year 17.50 per inch
13 times in 1 year 16.00 per inch
26 times in 1 year 14.00 per inch
52 times in 1 year 12.50 per inch

For PROOFS on display ads, copy must reach SCIENCE 4 weeks before date of issue (Friday of every week).

POSITIONS WANTED

(1) Bacteriologist: Ph.D., 1 year assistant, 2 years' fellow, university research department, seeks industry or academic teaching, any locality, age 27, veteran. (2) Parastologist: Ph.D., minors bacteriology, pathology, research, any locality, veteran. (3) Bacteriologist: Sc.D., 5 years research associate—bacteriology, leading pharmaceutical company, interested research—development, management, bacteriology, or biochemistry, any locality, age 31, veteran. (4) Histologist: B.S. biology, M.S. pathology, desires teaching position, any locality, age 28, veteran. For further information please write, Science Division, Woodward Medical Bureau, 185 North Wabash, Chicago.

Parasitologist—Biochemist, Ph.D. Three years' teaching experience, bacteriology, blood fractionation. Available September. Box 136, SCIENCE.

(a) Ph.D.: Anatomy; available for teaching position in gross anatomy or neuro-anatomy; six years' assistant professor, anatomy, university medical school. (b) Bacteriologist: Ph.D.; twelve years' teaching experience, four years, chief and head of biology department, large university; past several years, associate professor of bacteriology. For further information, please write Science Division, Medical Bureau, (Burneice Larson, Director) Palmolive Building, Chicago.

POSITIONS OPEN

(1) Bacteriologist: B.S. or equivalent, scientific research, some serology; $7000 plus 10% bonus, two year contract; Japan. (2) Bacteriologist: M.S. or Ph.D., clinical pathological laboratory, 350-bed hospital affiliated with medical school, maintains medical technology school, teaching program, educational city; $7000. (3) Biochemist: Ph.D., supervise chemistry laboratory, excellent hospital affiliated medical school, faculty status; $6000 up. (4) Biochemist or Physiologist, Ph.D., experienced fluid and electrolyte Metabolism with isotope experience hospital affiliated with medical college. For further information please write Science Division, Woodward Medical Bureau, 185 North Wabash, Chicago.

Medical School appointments: Assistant Professor of Physiological Chemistry, Midwest; Instructor, Department of Pharmacology, East. Please write Scientific Personnel Service, 122 South Michigan Ave., Chicago.

Pharmacologist, recent Ph.D., experience desirable; research in large drug manufacturing company in East. Salary open. Box 137, SCIENCE.

(a) Young physician experienced research; toxicological laboratory, leading industrial company; key appointment; East. (b) Director of applied research involving detergents; physician or biochemist, Ph.D.; Midwest. (c) Physiologist; rank dependent qualifications; one of leading universities. (d) Associate professor of chemistry; principal field, physical chemistry; teaching proficiency, interest and skill in research required, opportunity headship. (e) Biochemist to supervise department, technologist, teaching organic chemistry, development of methods, 300-bed hospital; East. 7.3 Science Division, Medical Bureau, (Burneice Larson, Director) Palmolive Building, Chicago.

Physics—Several vacancies at various levels in instructional staff. These positions should interest young Ph.D. seeking opportunity for advancement. Holders of M.S. also considered for some positions. Salaries appropriate to qualifications and experience. Opportunity for part-time research available to qualified appointees. Interested persons please contact H. E. Harrington, Head, Physics Department, Oklahoma A. and M. College, Stillwater, Oklahoma. 7/10; 17.

When Accuracy is Important

**THE CASTLE PRECISION INCUBATOR** is designed and built to give you the precise accuracy that is essential in bacteriological work. Construction is of monel metal for lifetime use.

Independent laboratory tests proved these two important facts:

**UNIFORMITY:** ± ¾°C. Never as much as a degree variation between top and bottom of chamber even when loaded.

**CONSTANT TEMPERATURE:** ± ⅛° to ¼°C. Never more than a fraction of a degree variation at the thermometer ... despite room temperature fluctuations from 10° to 35°C.

For full details write: Wilmot Castle Co., 1212 University Ave., Rochester 7, N. Y.

---

**Paper Partition CHROMATOGRAPHY**

**The Reco**
**ELECTRIC DESALTER**
For the removal of inorganic salts from organic and amino acid solutions to be chromatographed.

**The Reco**
**CHROMATOCAB**
For two dimensional paper chromatography, using standard filter paper sheets 18¾ by 22½ in., or smaller.

**ALSO AVAILABLE:**
Densitometers . . . for quantitative determinations on paper
Ultraviolet Lamps
Pyrex Disc Chambers
Micro Pipets
Drying Ovens

---

Racks
Stainless steel or glass for one dimensional chromatography.

**INDICATOR SPRAYS**
For application of indicators to chromatograms.

**CLIPS**
All stainless steel spring clips for holding chromatograms to glass rods.

**SOLVENT TROUGHS**
For use in chromatocabs or one-dimensional racks.

NEW MOSBY BOOKS!

Zoethout-Tuttle's

TEXTBOOK OF PHYSIOLOGY

Eleventh Edition

Very rarely in a publisher's experience does a book receive the acclaim of all the reviewers. It would seem that reviewers differ in their judgment at times for trivial causes. Some like to criticize for inscrutable reasons—and others with warm-hearted sympathy like to encourage the writer because they know the work that goes into the least of the scientific books.

Recently, we read about fifty comments sent in to us by instructors who had read the Eleventh Edition of TEXTBOOK OF PHYSIOLOGY. Most of them were using it in their classes—others hope to adopt it next semester. Typical of all their remarks is: "A great text." (A.J.S., Grad. Asst., University of Pittsburgh)

They all stressed its outstanding features—especially the fact that it covers the function of all organs. And that along with highlighting the interdependence of all the organs, much space has been devoted to nutrition, physical exercise, mental work, fatigue, and kindred topics not usually discussed in books on Physiology.

If you would like to join this satisfied group of instructors, you have only to ask us to send you a copy of the book for inspection. We'll see that you get one promptly.

By WILLIAM D. ZOETHOUT, Ph.D., Professor Emeritus of Physiology in the College of Dental Surgery (Loyola University); and W. W. TUTTLE, Ph.D., Professor of Physiology, College of Medicine, State University of Iowa. Eleventh Edition. 692 pages, 302 illustrations (5 in color). Price, $4.75

Walling’s

LABORATORY MANUAL
FOR ELEMENTARY PHYSIOLOGY

Fifth Edition

The experiments included in this manual are planned to demonstrate the simpler, fundamental reactions of the living organism and the protoplasm of which the organism is composed. Since courses for elementary physiology and the laboratory facilities of different institutions vary widely, more exercises are listed than could possibly be performed by any one class in the allotted time. Thus, the instructor is given a wide selection of experiments from which to choose those most suited to his needs.

Within the manual, spaces have been provided for written answers to all of the questions; for drawings, and for the kymograph tracings.

By LALIA V. WALLING, Assistant Professor Emeritus, University of Kansas. Fifth Edition. 257 pages, illustrated.

Price, $3.75

SAINT LOUIS       SAN FRANCISCO       NEW YORK
The Transistor, that revolutionary new electronics device, is a product of telephone research. It was conceived, invented and developed at Bell Telephone Laboratories by men in search of ways to improve telephone service. It was announced just five years ago.

The Transistor can do most of the things that vacuum tubes can do—and others, too—but it is not a vacuum tube. It works on entirely new physical principles. Rugged, simple and tiny, the Transistor uses incredibly small amounts of power—and then only when actually operating.

Transistors promise smaller and cheaper electronics equipment and the spread of electronics where other equipment has not been able to do the job as economically. They are already at work in the Bell System, generating the signals that carry dialed numbers between cities, and selecting the best route for calls through complex switching systems. Engineers see many other possibilities: for example, as voice amplifiers in telephone sets to aid the hard of hearing, and as switches.

Recognizing the tremendous possibilities of the Transistor in every phase of the electronics industry, the Bell System has made the invention available to 40 other companies. Thus, again, basic research to improve telephony contributes importantly to many other fields of technology as well.

**TRANSISTOR SUMMARY**

Basically, a Transistor is a tiny wafer of germanium with three electrodes, over-all about the size of a coffee bean.

It can amplify signals 100,000 times on much less power than a pocket flashlight requires. This opens the door to its use in smaller telephone exchanges where vacuum tube equipment would be too costly to operate.

Unlike a vacuum tube, the Transistor has no vacuum and no filament to keep hot. It operates instantly, without "warm-up" delay. The Transistor can also be used as an electric eye and to count electrical pulses.

**BELL TELEPHONE LABORATORIES**

Improving telephone service for America provides careers for creative men in scientific and technical fields.
