A MANUAL for the ORGANIC CHEMISTRY LABORATORY

By LEIGH C. ANDERSON and the late WERNER E. BACHMANN, University of Michigan.

Developed in classroom use, this manual is planned for such flexibility that it can be used with any textbook. It provides complete coverage; each experiment including equations, directions, and discussion of principles. General laboratory procedures are outlined with reasons and precautions where necessary for complete comprehension.

It illustrates the preparation of important types of organic compounds and application of the more important reactions. 1953. In Press.

PROCEDURES in EXPERIMENTAL METALLURGY

By A. U. SEYBOLT and J. E. BURKE, both with the General Electric Company.

The material presented here—collected for the first time in one work—details the major unit operations carried out in doing experimental work with metals. The first book to deal directly and comprehensively with the techniques of preparing metal samples up to the point of observation, it features a summary of the methods of growing single crystals, techniques of vacuum metallurgy, application of refractories to metal research, and a list of the pure metals and their sources of supply. 1953. Approx. 352 pages. $6.00.

FISHERY SCIENCE: Its Methods and Applications

By GEORGE A. ROUNSEFELL, Department of the Interior, and W. HARRY EVERHART, University of Maine.

This is the first book to consider marine and freshwater fisheries management as essentially similar. Its major aim is to show how to recognize a problem, how to devise methods for solving it, how to choose the techniques, and how to use them.

Mr. Clarence Cottam writes from the U. S. Department of the Interior, "It seems to me that the book will soon be regarded as an indispensable tool, summary, and guide for the scientists, technicians, and administrators concerned with the Nation's aquatic resources." 1953. 444 pages. $7.50.

NATIONALISM and SOCIAL COMMUNICATION

By KARL W. DEUTSCH, Massachusetts Institute of Technology. This book deals with the when, why, and how of nationalism, offering a structural and quantitative analysis which paves the way for eventual measurement and prediction in this field. It is the first book to apply some of the new ideas of communication theory and cybernetics to the fundamental problem of nationalism, and to suggest ways in which these ideas may be usefully combined with other social science methods. The results of analysis are presented against a background of empirical and statistical data drawn from data available only since World War II. The manuscript for this work was awarded the Sumner Prize in Political Science from Harvard University in 1951. This is A TECHNOLOGY PRESS BOOK, The Massachusetts Institute of Technology. 1953. 292 pages. $5.00.

New! . . . Odum —
Fundamentals of Ecology

This new book is a balanced synthesis of the entire field of ecology, with emphasis on group behavior and the interrelations between plants, animals, microorganisms and man. Part I presents the basic principles of ecology, approaching the subject in a new way not found in previous books—for each principle or concept there is a brief “Statement”, a full “Explanation”, and one or more clear-cut “Examples”. Part II, Major Environments, is organized along the lines followed in field and laboratory work. Part III applies the principles and investigations covered in the first two sections. The first two parts are cross-referenced so that study may begin in either section. Illustrations have been carefully planned to achieve a balance between graphs, pictorial diagrams, and photographs.

By EUCENE P. ODUM, Ph.D., University of Georgia, Athens, Georgia. 340 pages, 5½” x 8½”, 150 illustrations.

Albritton —
Standard Values in Blood

Here is a remarkably comprehensive collection of tabular data on the composition and reactions of the blood in man and in laboratory and other animals. Over 600 leading investigators in biology and clinical medicine have joined in supplying and reviewing the data. Tables give not only the most representative single values for the items covered but also give ranges of variation. This unique treatment of the well-known phenomenon of biological variability permits the reader to see at a glance the upper and lower limits of ordinary variation of any item. The sections on red cells and platelet count and white count differential from birth to maturity; carbohydrates in man and other forms; and blood lipids are among the best and most complete ever published.

Edited by ESARIT C. ALBRITTON, M.D., Fry Professor of Physiology, The George Washington University. Prepared under the direction of The Committee on the Handbook of Biological Data, American Institute of Biological Sciences, National Academy of Sciences—The National Research Council. 199 pages, 8½” x 11”, illustrated. $4.50.

For assistance in developing any type of lead shield, ... call upon the experience of T/A!

Let us help you with your lead shield requirements!

We have wide experience in the design and development of lead shields. For many years, we have supplied standard and custom-built shields to atomic projects, leading industries, research laboratories, and the armed forces.

Inquiries regarding special shields invited

In addition to the types shown, we are prepared to supply shields to meet specific needs, including side aperture tubular shields for thyroid cancer work, end-opening shields for use in studies of the circulatory system, and many other types. Whatever your lead shield requirement, we can supply it here at Technical Associates.

Accessories available

We manufacture a large number of useful accessories for lead shields, such as planchets, sample trays, tube mounts, etc. Special equipment can be furnished upon request. Your inquiries are welcome.

Finest Japanese Optics and Workmanship

Built to our specifications. Priced far below comparable values. Be assured of a lifetime of excellent performance. Equal to the World's finest optical instruments.

Student Microscope (Model UMC-300)
An unusually fine piece of workmanship. Suitable even for making blood count and other laboratory work within the range of its magnification.

Stand inclinable to 90°.
Objectives: Achromatic: 10X, 20X.
Eyepieces: Huygenian. 5X, 15X.
Magnification: 50X to 300X.
Wt. in case: 5 lbs.

Specially Priced $40.00

Binocular Microscope (Model E 3 N)
Used by research laboratory, re- search technicians, physicians and scientists. Instrument complete for visual and photomicrography.
Includes Monocular tube for photomicrography.
Calibrated mechanical stage.
3-Lens NA 1.4 Condenser.
Calibrated ABBE DECENTERING device.
Calibrated Condenser Diaphragm.
Substage revolves for Polaroid work.
Four nosepieces: Achromatic, 5X, 10X, 40X, 100X. Coated.
Three eyepieces: Huygenian. 5X, 10X, 15X.
Magnification: 25X to 1500X with monocular tube, increased 50% with binocular.

Special Introductory offer $374.95

Strength

... is important in laboratory glassware, too

The ox is one fellow who never shies away from pulling his own weight. In fact, he often pulls many times it.

If you are a lab instructor, you know that your glassware has to be strong enough to "more than pull its own weight," too... first, because you are responsible for the safety of your students, and second, because you can't afford constant replacement costs.

That's why it pays to take advantage of the safety and economy of durable PYREX brand laboratory glassware. Experience in thousands of schools has proved its ability to withstand steady, day-to-day use by inexperienced hands.

You can be sure of utmost resistance to physical and thermal shock because it is made of famous PYREX brand glass No. 7740. You also can depend on added protection against breakage plus simple handling and storage because of its functional design.

Your laboratory supply dealer stocks the complete PYREX laboratory ware line. Call him today. Whatever your lab needs are, he is ready to serve you.

PYREX BRAND TEST TUBES
— Twenty-two standard sizes from 10x75 mm. to 65x500 mm. Strong, sturdy... tops for applications encountered in school chemistry.

PYREX BRAND REAGENT BOTTLES

WATCH GLASSES—Pressed instead of blown construction for maximum strength. High chemical resistance prevents contamination of solutions during boiling operations.

PYREX® the laboratory glassware that gives you economy, accuracy, durability

CORNING GLASS WORKS, Corning, New York

Corning means research in Glass
This personnel monitoring instrument measures the cumulative exposure to gamma or x-rays over a given period of time. The instrument consists of an ionization chamber, a quartz fibre electrometer and a graduated scale and viewing system. The charging unit comprises a 180 volt "B" battery, a 1½ volt "A" battery, a flashlight bulb, the well for inserting Dosimeter, and the charging control.

PAPER PARTITION CHROMATOGRAPHY

The Reco Electric DESALTER
For the removal of inorganic salts from organic and amino acid solutions to be chromatographed.

The Reco CHROMATOCAB
For two dimensional paper chromatography, using standard filter paper sheets 18¾ by 22½ in., or smaller.

RACKS
Stainless steel or glass for one dimensional chromatography.

INDICATOR SPRAYS
For application of indicators to chromatograms.

CLIPS
All stainless steel spring clips for holding chromatograms to glass rods.

SOLVENT TROUGHS
For use in chromatocabs or one-dimensional racks.

Matheson, Coleman & Bell Reagent Chemicals include practically all of the items used in research and analytical work. The Reagent Inorganic Chemicals carry upon the label a statement showing the maximum limits of impurities allowed. The Reagent Organic Chemicals are manufactured to pass the specifications shown in our price list. In addition to Reagent Inorganic and Organic Chemicals we offer many items of U. S. P., N. F., Practical and Technical quality.

Complete stocks of MC&B items are carried at our East Rutherford and Norwood plants and are available either through your laboratory supply dealer or from the East Rutherford or Norwood offices.

Our new catalog listing 3911 reagent chemicals, biological stains, chemical indicators and solutions will be sent to you upon request.

And . . . as always . . .
The Matheson Co. carries the most diversified line available of compressed gases and gas regulators.

Here are eight distinct reasons why Haemo-Sol is the preferred cleaner for laboratory glassware.

- Completely Soluble
- Leaves No Residue
- Fully Haemo-Digestive
- Lower Surface Tension
- Scientifically Formulated
- Controlled pH
- Multiple Laboratory Uses
- Greater Economy

You obtain Precise Measurements and Observations with the

Welch CATHETOMETER

- Vertical range 100 cm
- Vernier reading to 0.05 mm
- Telescope with rack and pinion
- Working distance 45 cm to infinity
- Tangent screw adjustment
- Level sensitive to 50 seconds of arc
- Vertical shaft of Stainless Steel

This cathetometer is intended for measurements and observations in both industrial and educational laboratories wherever an inexpensive instrument of good precision is needed. It is rigidly constructed and every essential adjustment can be made simply and positively.

The telescope is mounted horizontally on a carriage which may be moved up or down or around the 30-mm vertical rod. A tangent-screw adjustment permits precise leveling and a sensitive elevation adjustment is incorporated in the carriage. An auxiliary level in the base greatly accelerates the leveling process. Magnification is 12x at 45 cm.
