DENSIGRAPH
(RECORDING DENSITOMETER)

- A manually operated Recorder which provides a continuous ink tracing indicating percentage light transmission
- For convenient and rapid photometric analysis of light absorbing materials on dry paper strips obtained in electrophoresis and chromatography

DENSIGRAPH (Recording Densitometer), A. H. T. Co. Specification, (Patent Applied For), manually operated. For convenient and rapid photometric analysis of light-absorbing materials by determining light transmission and lineal separation of stained areas on dry strips of paper as obtained in electrophoresis and chromatography.

Simultaneously combines the usual operations of scanning, indicating and recording to produce a continuous inked tracing of the output of a photovoltaic cell on graph paper marked in millimeter squares to indicate percentage light transmission. Takes paper strips up to 40 mm wide and treatment of the paper to make it translucent is not required.

Consisting of a modified microammeter with extra manually controlled pointer, photocell, 6-volt lamp, adjustable slit, constant voltage transformer to operate the lamp, and a pen which traces a curve when the pointer on the microammeter is followed closely by the manually controlled pointer which is operated from the front of the cabinet by means of a mechanically linked lever.

In use, stained paper strips are attached by adhesive tape to the right edge of the graph paper, below the adjustable slit, and advanced beneath the photocell housing by the hand wheel at the left of the cabinet. Lateral movement of the lever with the right hand makes it possible to align the manually controlled pointer continuously with the indicating pointer of the meter and, as the rate of travel of the graph paper is under the control of the operator's left hand, the fidelity of the resulting curve depends upon the manipulative skill of the operator. A continuous record of an electrophorogram 6 inches long can be completed in approximately 5 minutes and portions of the curve can be rechecked by simple roll-back of the graph paper.

New (6th) Edition!

Arey's
Developmental Anatomy

In the New (6th) Edition of this great embryology textbook:

1. The text has been completely rewritten. Dr. Arey has culled the literature of many languages to give an exact account of the status of each topic he discusses.

2. This revision will prove doubly useful—as an undergraduate text and in meeting the requirements of the medical student who wants to increase his knowledge of the subject.

3. So that college students may easily grasp the information, descriptions have been simplified and clarified; chapters are shorter, more concise.

4. As a further aid, large type is used for basic material needed in college and pre-medical courses, and small type is used for supplementary data with which the medical student can complete his understanding.

5. In addition to the chapter on Experimental Embryology, there is a summarization concerning the results of experimental analysis titled "Causal Relations".

6. This book remains the only general text that also contains a very practical laboratory manual.

7. Inclusion of material on the 72-hour chick is another new feature that makes the book worthwhile.

8. The illustrations (590 of them, many in color) continue to be especially vivid. Many new ones have been added.

By Leslie Brainerd Arey, Ph.D., Sc.D., LL.D., Robert Laughlin Rea Professor of Anatomy, Northwestern University. About 616 pages, 6¼" x 9¾", 590 illustrations, many in color.

Proven Performer In The Laboratory

CRYO-DESICCATOR

FOR USE IN:

- Histology
- Cytology
- Histopathology
- Cytochemistry
- Histochemistry

The Tissue Cryo-Desiccator provides a simple, rapid reliable and inexpensive method of preparing frozen dried tissues.

Tissues are supported in a basket which has movable partitions to accommodate specimens of different sizes.

Temperature is measured under the same conditions as the tissue. Liquid nitrogen is used to cool the tissue. Automatic sealing is achieved by atmospheric pressure.

This new Cryo-Desiccator is inexpensive to operate and easy to use. Glass parts are held to a minimum and the construction is rugged.

For further information write:

2385 RHODE ISLAND AVE., N.E. WASHINGTON, D. C.

Cat. No. 9-99 . . . . . . Price $1450.00

FURNISHED WITH THE FOLLOWING ACCESSORIES:

- 1 extra glass tube for tissue heater
- 1 electric cord
- 1 flexible metal tube for attaching to pump
- 1 dial thermometer, Weston 0–180 Deg. F.
THE RICKETTSIAL DISEASES OF MAN

This symposium volume is a comprehensive survey of the general field of Rickettsial diseases in man. Among the contributors appear the names of many of the foremost American authorities on this important and relatively new field of medicine.

The first group of papers includes discussions of the taxonomy, biology, isolation, and identification of vectors, and reservoirs of infection of the Rickettsial diseases of man. The second group of papers is devoted to discussions of serological reactions, the Weil-Felix reaction, the complement-fixation and agglutination reactions, and the preparation and standardization of Rickettsial vaccines. The final group of papers treats of insecticides, methods of their application, and mite controls.

Many of the 27 contributors to this volume during World War II were on the battle fronts in Africa, Italy, France and Germany, protecting our troops and the local populations wherever Rickettsial diseases prevailed. Rarely, if ever, have the authors of a medical book had so wide and so successful practical experience in the very subjects on which they have written.

The double-barrel benefit of a **TWIN-BEAM** record

*Photographically recorded—separately or simultaneously*

*Phonocardiograms* —
are fully detailed recordings of ALL of the heart sounds and murmurs present. The location, pitch, duration, and intensity of a murmur are reproduced with the same completeness of detail as are the auricular, first and second sounds of the normal record shown above.

**TWIN-BEAM** Phonocardiograms

**Electrocardiograms**

**TWIN-BEAM** Electrocardiograms show ALL complexes in small animal 'cardiograms (such as taken on a mouse) clearly and accurately. This new, high deflection speed also permits added accuracy in research and clinical human 'cardiography.

**PLUS** Electrical Auscultation
Cardiac sounds and murmurs are heard with the TWIN-BEAM exactly as with an acoustic stethoscope.

**TWIN-BEAM CARDIETTE**

For descriptive literature and a complete outline of these and many other advantages for the TWIN-BEAM user, address

Only MSE offer a range like this...

Booth 36
Federation of America Society for Experimental Biology Convention
April 12-16
Atlantic City

5 Refrigerator Centrifuges to choose from...

* 1, 2.4 or 3.6 liter models for operating at speeds up to 6,000 r.p.m.

* High-speed "Angle-13" giving 13,000 r.p.m. at 400 ml. capacity

* Super-speed "Angle-20" giving 20,000 r.p.m. at 400 ml. capacity

Now that centrifuging is extending more and more into the low temperature field, MSE have produced a range of no fewer than five refrigerator centrifuge models which will meet between them almost any requirement as to speed, capacity and low temperature. No other manufacturer offers so comprehensive a series.

Manufacturers: Canadian MSE Limited of Toronto 18, Canada and MSE Ltd. of London, England.

Laboratory Glassware for STRENGTH

Test Tubes—PYREX test tubes are the most economical available. High in thermal and physical strength and chemically stable. Never cloud. Durable.

Beakers—Built to withstand long, hard use. Supplied in sizes, weights and designs suitable for all general laboratory work. All with fire polished rims.

Three Neck Flasks—Made from selected blanks of substantial weight with carefully sealed side necks for greatest strength. All necks tooled for uniform stopper fit.

Funnels—Flutes, plain, long stem, short stem or stemless—small or large diameter. All built for heavy-duty wear. Edges beaded for easier cleaning, greater safety.

What this added strength means to you . . .

The biggest factor in laboratory glassware costs is breakage, either from mechanical or thermal shock. The best way to minimize breakage is to standardize on PYREX laboratory glassware.

The properties of PYREX brand glass 7740 are balanced to give you extra mechanical and thermal strength. Its low expansion coefficient permits heavier construction without sacrificing necessary thermal shock resistance.

Wherever possible, extra strength is designed into every piece of PYREX ware. Reinforced joints at tubulation, pressed construction when possible and uniform wall thicknesses are only a few examples of this built-in strength.

But strength is only one of the added benefits you get with PYREX ware. Its chemical durability provides protection against corrosive chemicals and insures against contamination of sensitive reagents.

The products you see illustrated, and hundreds more, are carried in stock by your laboratory supply dealer—call him today for anything you need . . . he is always ready to be helpful.

Paper Electrophoresis

Apparatus

Applicable for clinical estimation of human blood protein constituents

Price: Reco Model E-800-2 Paper Electrophoresis Apparatus, consisting of Power Unit and Migration Chamber, complete, $290.00

(Price does not include Automatic Timer)

Special Features

+ Water Cooled Surface for Paper or Starch...The platform surface, on which buffer saturated filter paper or starch is placed, is cooled by circulating water (see illustration) to reduce evaporation and minimize change in buffer solution during operation, thus permitting use of high voltages.

+ Power Unit supplies 0-720 volts at 200 milliams continuously variable, with 3½-inch volt-meter and 3½-inch double scale milliamperemeter reading 0-20 and 0-200 milliams for accurate current measurements. Direct current measurements. Direct current ripple is reduced by means of a choke-capacitor filter. Multiple power outlets available at nominal extra cost. For 115 volts AC.

+ Anti-diffusion plates in electrode troughs reduce any changes in electrolyte at the paper due to electrolysis.

+ Platform surface is quickly adaptable for either paper or starch paste by means of end gates.

+ Electrode vessels easily dismounted for cleaning.

+ Automatic timer for use in conjunction with power supply (at additional cost).

“Nalgene” Polyethylene

PIPETTE JARS
For Soaking, Washing, Storing Pipettes SAFELY

The “Nalgene” Pipette Jars are made of unplasticized virgin polyethylene. They are strong and easy to handle because of their light weight and non-slip surface. “Nalgene” Jars can’t break in normal use, and being soft and resilient help to prevent breakage of pipettes.

“Nalgene” Pipette Jars at room temperatures are chemically resistant to acids, alkalies, cleaning solutions and detergents. They are the softest and most convenient jar for washing and storage of pipettes. Available in four sizes. The 7 x 17½ ins. size will fit most automatic pipette washers.

STANDARD

Automatic Electric IMMERSION HEATERS

Designed to Raise & Keep liquids at the Correct Temperatures at all times

Entirely automatic. Adjustment knob regulates temperature as calibrated on dial. Thermostat controls temperature to 1°F, tolerance. Built of acid-resistant stainless steel alloy. No loss of heat. No heat is wasted. Safe, easy to use, no fire hazard. Completely insulated against electric shock. Safety cut-out prevents elements from over-heating in or out of solution. Will raise temperature of one gallon of liquid 10°F per minute, gives uninterrupted service any place—any time. Plastic fingergrip handle is always cool. Operates on 115 Volts A.C., ratings 100 to 1,000 Watts. Units are supplied with 6 ft. rubber-covered electric cord and unbreakable rubber plug.
