PRE-CAMBRIAN SEDIMENTS IN THE ADIRON-
DACKS.*

CONTENTS.
Introduction, the rise of stratigraphical geology.
Its gradual application to the pre-Cambrian strata.
The Adirondacks outlined, geographically and geologi-

ically.
Work of C. H. Smyth, Jr., H. P. Cushing and
the writer.
The Varieties of Sedimentary Rocks.
The Limestone.
The Quartzites.
Minor Associates of the Limestones.
The Sedimentary Gneisses.
General Distribution of the Metamorphosed Sediments.
The Northwest.
The Eastern Side.
Resumé.
Typical Stratigraphical Cross-sections.
Catamount Mountain.
The Western Spur of Whiteface.
The Lewis Section of Quartzite.
Limkiln Mountain.
Styles Brook Section in Southern Jay.
The Significance of Graphite.
Conclusion.

Stratigraphical geology had its rise in
those old mining regions of Germany, the

* Address of the Vice-President and Chairman of
Section E of the American Association for the Ad-
vancement of Science, given at the New York meet-
ing, June, 1900.

The field work on which the above paper is based
was done under both the U. S. Geological Survey and
the New York State Geological Survey. All the data
under the authority of the latter and here drawn
upon have been printed. For permission to use
much unpublished matter belonging to the former
acknowledgments are here respectfully made to the
Hon. Charles D. Walcott, Director.
