For more than 40 years laboratory people have been justified in relying on Freas. During many of these years we were unable to produce Freas units as fast as they were called for. Now, after notable expansion, we can ship most models from stock. Freas quality, far from being compromised, has actually been improved.

*Ask your laboratory supply dealer about Freas ovens, incubators or sterilizers.

Specify FREAS First . . . to Last
a new, immediately usable lab manual

Emphasis in this new laboratory manual is on the major anatomical transformations that have occurred in the vertebrates in the course of their evolution from fish to mammal. The author has organized the book by systems. Under each system he gives clear, descriptive guides to the dissection of several vertebrates representing the three levels of organization. The dogfish (Squalus) is used as an example of a primitive, jawed fish; the mudpuppy (Necturus) represents the primitive terrestrial vertebrate; and both the cat (Felis) and the rabbit (Lepus) exemplify the mammal.

Teachers will find the material readily adaptable to their particular comparative anatomy course and to any standard text.

By Warren F. Walker, Jr., Ph.D., Associate Professor of Zoology, Oberlin College, Ohio. 331 pages, 6" x 9", illustrated. $3.50. New.

new (2nd) edition - a modern approach

This is a modern approach to cytology—the ultrastructure of the cell is considered as well as the established methods of fixation and staining. The text is a synthesis of the most important aspects of cellular structure and function as encountered in man and in animals. The authors use methods of physics, chemistry and biochemistry to interpret the nature of intracellular processes and the functional significance of cellular structure.

For this New (2nd) Edition the text has been completely revised. There are new sections on: cell metabolism; the action of radiations and chemical agents in cytogenetics; and plastids.

By E. D. P. DeRobertis, M.D., Head of the Department of Cell Ultrastructure, Institute for the Investigation of Biological Sciences, Montevideo, Uruguay; W. W. Nowinski, Ph.D., Associate Professor of Biochemistry, University of Texas Medical School; and Francisco A. Saez, Ph.D., Head of the Department of Cytogenetics, Institute for the Investigation of Biological Sciences, Montevideo. 456 pages, 6" x 9", with 162 illustrations. $7.75. New (2nd) Edition.
For Advanced Courses in Bacteriology, Microbiology and Fermentation

THE LIFE OF BACTERIA
by Kenneth V. Thimann

The central theme of this detailed, well-illustrated text is the bacterium and its influence on its environment. Presupposing a knowledge of organic chemistry, the text treats the physiology and biochemistry of bacteria together with their structure, classification, and relationship to other microorganisms. Particularly noteworthy is the balance of emphasis between the descriptive side, including taxonomy, and the functional side, especially the biochemical reactions which form so large a part of modern bacteriology. There are numerous illustrations, tables and graphs.

Ready in November.

Completely Rewritten with 3 Additional Chapters

THE THEORY of the PHOTOGRAPHIC PROCESS, Second Edition
by C. E. Kenneth Mees

Here is a complete, up-to-date revision of the well-known volume that reviews and summarizes the scientific work which has contributed to the knowledge of the photographic process. The book deals with the composition and properties of photographic light-sensitive materials; the factors which control their sensitivity to light; the changes induced in them by the action of light; the nature of the process of development; the properties of the final image; and the measurement of its tone values. The book is fully illustrated with diagrams and half-tones.

The Macmillan Company
60 FIFTH AVENUE, NEW YORK 11, N. Y.
Watch Glasses— High chemical stability reduces possible contamination from watch glass during evaporations. Heavy molded construction for service and uniform curvature.

Funnels—Flutes, plain, long stem, short stem or stemless — small or large diameter. All built for heavy-duty wear. Edges beaded for easier cleaning, greater safety.

Test Tubes—PYREX test tubes are the most economical available. High in thermal and physical strength and chemically stable. Never cloud.

Beakers—Built to withstand long, hard use. Supplied in sizes, weights and designs suitable for all general laboratory work. All with fire-polished rims.

Storage Bottles—For storage of distilled water or other bulk liquids. Protects against pH change. Heavy construction for strength. Sizes 2½, 3½, 5 and 12 gallons.

PYREX West Condensers—
Strong. Efficient. Glass permits thin inner wall for high heat transfer. Protected by heavy outer jacket.

How to identify heat-resistant glass

You can't tell by looking whether all-glass apparatus can withstand thermal shock without breaking.

But when you are using equipment made of PYREX brand glass No. 7740 . . . identified by the famous PYREX trade-mark . . . you can be sure from the start that your apparatus will stand up.

PYREX lab ware, you see, has high thermal strength. It can take direct burner flame . . . hold high-temperature contents . . . take sudden thermal shock . . . all with no effect. And it has a low coefficient of expansion, so that it can be made heavier and can be reinforced at points of stress, greatly increasing its service life.

In addition, PYREX glassware is mechanically strong. It can take physical shocks as well as thermal.

Actual checks by many users have proved that PYREX test tubes, for example, outlast other kinds 3½ to 1. Because it lasts so long, PYREX ware is the most economical you can use.

The items shown on this page, and hundreds more, are stocked by your Corning Dealer. Phone him for all your laboratory needs . . . he's always ready to be helpful.

CORNING GLASS WORKS CORNING, NEW YORK

Corning means research in Glass
G.A.B. Interference Filters
(Made in Switzerland)
for isolating narrow spectral bands

Spectral Range: 400-900 millimicrons
Spectral Width: 12-15 μ, Transm.: 45-50 %
Size: 2" x 2". Other sizes on order.

For Flame Photometry and Color Densitometry
Microscopy and Photomicrography
Colorimmetry and Fluorimetry
also in reflectometry, light scattering measurements, microcolorimetry, refractometry, polarimetry, and in all other fields requiring monochromatic light in the visible and near-infrared range.

KLETT ELECTROPHORESIS

CUSTOM MADE

TOOL FOR THE ANALYSIS
OF COMPLEX COLLOID SYSTEMS, AND FOR
THE CONTROL OF PRODUCTION OF
PURIFIED PROTEINS, ENZYMES, HORMONES

KLETT MANUFACTURING CO.
179 EAST 87TH STREET
NEW YORK, N. Y.
Wide-Range • Serviceable • Dependable

**STAINLESS STEEL TRIPLE BEAM BALANCE**

Highly resistant to corrosive action of laboratory fumes.

3 graduated scale levels for easy reading. Riders move easily.

Hard, Cobalite Knife Edges maintain true edge indefinitely.

Grooved Agate Bearings are protected against damage, yet readily accessible for cleaning.

**CAPACITY**
111 g. (With extra weight 201 g.)

**SENSITIVITY**
0.01 g. or less

**CORROSION-RESISTANT!**
All exposed metal parts are stainless steel. A tough, tenacious, chip-proof, metallic lacquer is used on the base and beam support.

**FUNCTIONALLY DESIGNED!**
Scales are stepped upward from to rear for best eye-level visibility and to make weights convenient to manipulate. The large weights have sharp hanger edges and their beams are deep-notched to insure that settings will be positive and accurate.

**ONE-PIECE BEAM CONSTRUCTION!**
No screws, rivets, or separate scales to become loose. Hard-to-clean crevices and cracks are eliminated.

**RAPID ZERO SETTING!**
The usually tedious adjustment to zero is accomplished almost instantly by means of a leveling screw. No more careless acceptance of a poor zero setting because of the nuisance of correcting it.

**Each $27.50**

**Extra Weight $1.50 Additional**
