**LEITZ PANPHOT  
UNIVERSAL  
CAMERA-MICROSCOPE**

Here is the universal camera-microscope with which you switch instantly from observation to photography. You simply shift a prism in the body tube. Permanently aligned research microscope, reflex camera and light source are combined in one convenient unit. The light source of the Panphot provides a filament lamp for observation and an arc light for photomicrography.

Ground glass in the mirror reflex camera gives you a clear, large image of the

subject to be photographed. The camera accommodates 3 1/4" x 4 1/4" plates or cut film (for black and white or color work). It is adaptable to 4" x 5" plates or films.

The Leitz Panphot Universal Camera-Microscope was designed for utmost versatility. It can be quickly and easily adapted to the Ultropak, phase microscopy, dark-field work, observation under polarized light, and many other uses.

# ELECTRONIC STIMULATOR

## and DUAL PULSE SYNCHRONIZER

8099-E.

8099-E5.

**ELECTRONIC STIMULATOR, Square Wave, Variable Pulse.** A versatile, self-contained unit which provides a wide range of recurrent wave pulses of variable duration, and also single impulse of variable duration, continuous d.c. stimulation up to 10 seconds duration; with polarity reversing switch. Useful for a variety of physiological and pharmacological and biological applications and providing:

**Recurrent square wave pulses,** variable in duration from .05 to 50 milliseconds ( $\pm 10\%$ ) in 10 steps, variable in amplitude continuously from 0.01 to a maximum of 150 volts ( $\pm 10\%$ ) with terminal load of 10,000 ohms, and variable in frequency in 10 steps from 1 to 240 per second ( $\pm 10\%$ ), reproducible within  $\pm 2\%$ .

**A single impulse of similar variable duration.** Continuous d.c. stimulus, controllable manually up to 10 seconds duration simply by depressing the "D.C." lever-type knob.

The instrument is excellently adapted for determinations of rheobase and chronaxie. Polarity is readily reversible by means of a toggle switch. Variation of frequency does not affect wave form. A neon glow lamp flashes in synchronism with output pulses. Appropriate terminals are provided for attachment to an oscilloscope to permit synchronized observation of reaction time; for connection to a signal magnet of 3 ohms or more; and for joining the separately controlled pulses from two Stimulators through the Dual Pulse Synchronizer.

8099-E. Electronic Stimulator, Square Wave, Variable Pulse, as above described, complete with 5 ft. connecting cord and plug, and directions for use, but without Synchronizer. Power consumption 50 watts. For 115 volts, 50 or 60 cycles, a.c. .... 125.00

**DUAL PULSE SYNCHRONIZER, Variable Interval.** For providing a variable separation between consecutive pulses from two Stimulators to produce a double stimulus or recurrent double stimuli, with component pulses of independently controlled duration and amplitude. Range of separation between components of double pulse is from 0.5 to 500 milliseconds in 30 steps. With device for decoupling pulse components. Particularly useful for investigations of refractory cycle of tissues.

Matching metal cabinets of Stimulator and Synchronizer have sloping fronts and carrying handle, and are finished in smooth gray Hammertone enamel.

8099-E5. Dual Pulse Synchronizer, Variable Interval, as above described, with cables and plugs for attachment to two 8099-E Stimulators, from which Synchronizer draws its power, and also leads for connecting Stimulator output terminals ..... 75.00

Showing 8099-E5 Dual Pulse Synchronizer connected with two 8099-E Electronic Stimulators to produce a double stimulus, or recurrent double stimuli, with component pulses of independently controlled duration and amplitude.
