heart of the matter is this... files 45% more!

because every inch is a filing inch

one 19" x 19" Lab-aid unit section holds up to 6500 1" microslides

other bulky files need this much more space to hold as many slides

There's no waste space inside a Lab-aid filing cabinet... no thick bulkheads, no massive tracking guides; every inside inch is a hard-working filing inch. Thanks to patented Lab-aid construction, drawers are freely interchangeable, too... you can file 1" and 2" microslides, even 4" lantern slides or index cards, in the same section if need be.

True-tracking Lab-aid cabinets are staunchly built of heavy steel, strongly welded, beautifully finished. All have the same basic 19" x 19" square dimension so they stack rigidly to any desired height.

TECHNICON Lab-aid laboratory filing systems

Write for Brochure L-54 describing these uniquely efficient filing aids.

THE TECHNICON COMPANY Chauncey - New York
It's new—CENCO

Vapor Equivalent Apparatus
for residues from natural gas

This new instrument accurately measures the volume of vapor produced by a unit volume of liquid. And it also determines molecular weights by an adaptation of the Victor Meyer method. Samples are tested easily and quickly, each determination taking about 10 minutes.

Vapor equivalent determinations can be made of residues from natural gas samples or of any liquid with a vapor pressure of more than 4 mm. at the temperature of the vaporization bulb.

The Cenco Vapor Equivalent Apparatus, is a development of Phillips Petroleum Company and is manufactured and sold by Central Scientific Company under a license agreement.

SCIENCE is published weekly by the AAAS, 1515 Massachusetts Ave., NW, Washington 5, D.C. Entered at the Lancaster, Pa., Post Office as second class matter under the act of 3 March 1879. Annual subscriptions: $7.50; foreign postage, $1; Canadian postage, 50¢.
11 WILEY BOOKS — TO BE PUBLISHED IN COMING MONTHS

By R. L. Shriver, State University of Iowa; and R. C. Fusion and D. Y. Curtin, both of the University of Illinois. Many changes have been made in this edition, most of them emphasizing the research-laboratory approach to the identification of organic compounds. A new chapter on infrared and ultraviolet spectroscopy has been added, as well as new discussions of control reactions, mixed melting points and similar techniques. 1956. Approx. 418 pages. Prob. $6.00.

The Examination of New Organic Compounds

By Walter T. Smith, Jr., University of Kentucky; and Ralph L. Shriver, State University of Iowa. This laboratory manual contains a collection of methods used in the quantitative analysis of organic compounds. Whenever possible, semi-micro methods have been used, but certain macro-methods are also given. The procedures included are those which have been used satisfactorily by students. Most of the methods in this manual have been selected from numerous articles in the literature, rewritten and modified so as to be useful to students who have never carried out such analyses before. 1956. Approx. 144 pages. Prob. $3.50.

Steric Factors in Organic Chemistry

Edited by Melvin S. Newman, The Ohio State University. Deals with the effect of steric factors in organic chemistry, stressing the differences in reactivity and properties of molecules. The book includes all of the important notation systems; these are illustrated by the author’s projection formulas. It is also the first text which emphasizes problems of conformational analysis. Almost all of the chapters deal with aspects of steric factors not previously well covered in any other book. 1956. Approx. 682 pages. Prob. $10.50.

JOHN WILEY & SONS, Inc.
Heterocyclic Compounds, Vols. 5 and 6

Edited by Robert C. Elderfield, University of Michigan. The latest volumes in a series primarily designed to provide the chemist with the latest available information on heterocyclic compounds and a critical evaluation of the published data in the field. The chapters have been prepared by experts who are actively engaged in the fields about which they write. Approaching their subject from the standpoint of modern organic chemistry, these contributors stress the chemical principles involved in the syntheses and reactions of each compound discussed. Vol. 5—1956. Approx. 776 pages. Prob. $21.00. Vol. 6—1956. Approx. 590 pages. Prob. $21.00.

MATHEMATICS

Differential Equations, 3rd Ed.

By Harry W. Reddick and Donald E. Kibbey, both of Syracuse University. In its third edition this book deals as before with methods of solving ordinary differential equations and with problems in applied mathematics involving ordinary differential equations. Rewritten chapters include a discussion of adjoint equations, and new problems are given to illustrate new theory. In the problems on physical applications, the units involved are given so that numerical results may be expressed in proper form. 1956. Approx. 282 pages. Prob. $4.25.

PhysicS

Modern Physics for Engineers

By Robert L. Sproull, Cornell University. This book is the only modern physics text designed for engineers by an author who has taught the subject to engineers. It features an analytical approach to those applications of physics which have had the greatest impact on contemporary engineering. Featuring a large number of problems with a wide range of difficulty, it makes use of two dramatic devices to demonstrate physical principles: the transistor and the nuclear power reactor. The book also covers important applications in the electrical, thermal, mechanical, and magnetic properties of solids and in the electrical and chemical properties of surfaces. 1956. Approx. 528 pages. Prob. $7.75.

Psychology

Educational Psychology in the Classroom

By Henry Clay Lindgren, San Francisco State College. Distinguished by practicality and readability, this text unifies the materials of research and interpretation in the field of educational psychology and clearly defines the classroom problems teachers must face. Of particular importance is the author's discussion of the "psychology of the group" and the "discipline of the task." The case material used at various points is realistic and drawn from the author's own experience. 1956. Approx. 478 pages. Prob. $5.00.

24 OUTSTANDING WILEY BOOKS

BIOLOGICAL SCIENCES

Evolution, Genetics, and Man

By Theodosius Dobzhansky, Columbia University. A unique approach to the understanding of evolution, involving not only the past, but also the present—and the future. Emphasis is strongly on genetics. The early chapters treat elementary genetics and provide a solid foundation for the reader's understanding of the evolutionary events dealt with in later sections. Over 100 superior illustrations. 1955. Approx. 394 pages. $5.50.

Introduction to Parasitology, 9th Ed.

By Asa C. Chandler, Rice Institute. Primarily biological in approach, this highly readable text has been revised to emphasize the parasitic diseases of current interest in the world. The general sections on resistance, immunity, and insecticides have also been rewritten. The majority of the illustrations are new. 1955. 799 pages. $8.50.

Atlas of Outline Drawings for Vertebrate Anatomy, 2nd Ed.

By Samuel Eddy, University of Minnesota; Clarence P. Oliver, University of Texas; and the late John P. Turner, formerly of the University of Minnesota. A careful revision of an atlas used in more than 350 colleges and universities. The authors make all drawings directly from the animal. New drawings in this edition include: sagittal diagram of cat head; all drawings of cat muscles; all drawings of Necturus muscles; all drawings of shark skull, and sagittal section of dogfish shark brain. 1955. 166 pages. $3.25.

Life Science:
A College Textbook of General Biology

By Thomas S. Hall and Florence Moog, both of Washington University. A textbook of general biology which covers the present status of the various biological disciplines. "... a splendid and pioneering book. ... Not only do the contents read in a flowing, absorbing way but the illustrations alone are worth considerable attention." —A. I. B. S. Bulletin. ... 1955. 502 double-column pages. $6.50.

440 Fourth Ave., New York 16, N. Y.

2 DECEMBER 1955
CHEMISTRY

Androgens: Biochemistry, Physiology and Clinical Significance

By Ralph I. Dorfman, Boston University; and Reginald A. Shipley, Western Reserve University School of Medicine. The first book to compile, summarize, evaluate and correlate the available material in the literature on male hormones and related steroids. It emphasizes the clinical aspects of androgens and occurrence of overlap between various syndromes. It also includes a unique coverage of the concentrations of 17-ketosteroids in health and disease. 1955. Approx. 576 pages. Prob. $7.00.

Resonance in Organic Chemistry

By George W. Wheland, University of Chicago. The only current volume dealing specifically with resonance theory in chemistry. It differs from the conventional treatment of the subject in its stress on the application of quantum mechanical methods to problems of molecular structure and reactivity. 1955. 446 pages. $15.00.

An Introduction to Chemistry

By Howard L. Ritter, Miami University, Oxford, Ohio. Contains a great deal of factual chemical information but its emphasis is on chemistry as a cultural discipline, and principles are stressed. Intended as a one-year course at the freshman or sophomore level. 1955. 649 pages. $6.50.

An Introductory Laboratory Course in Chemistry

By Howard L. Ritter. Designed as a companion volume to the above text, but also useful with other texts, this manual covers a full year's work and is flexible enough to meet the needs of courses ranging from 3 to 6 hours in length. Nearly all the experiments are quantitative, and each demonstrates one or more major principles. 1955. 179 pages. $2.50.

Laboratory Outlines and Notebook for Organic Chemistry, 3rd Ed.

By Cecil E. Boord, The Ohio State University, Wallace R. Brode, National Bureau of Standards; and Roy G. Bossert, Ohio Wesleyan University. In this up-to-date revision, the authors have maintained the principle of including a larger number of exercises dealing with aliphatic compounds and a smaller number dealing with aromatic compounds. The authors provide individual laboratory experiments which evolve the idea of homology and isomerism. 1955. 314 pages. $3.90.

Physical Chemistry

By Farrington Daniels and Robert A. Alberty, both of the University of Wisconsin. Based on Professor Daniels' Outline of Physical Chemistry. Fundamental principles, including derivations and applications, are stressed. The authors emphasize material on the subjects of high temperature equilibria, introductory statistical mechanics, microwave spectroscopy, the free energy function, and the mechanism of enzyme catalysis. 1955. 671 pages. $6.50.

Nuclear and Radiochemistry

By Gerhart Friedlander, Brookhaven National Laboratory; and Joseph W. Kennedy, Washington University, St. Louis. A modern introduction to nuclear science from the chemist's viewpoint. A completely revised and expanded version of the authors' Introduction to Radiochemistry, the book provides comprehensive information on all recent developments, including nuclear reactions and energy production in stars, cosmic rays, etc. 1955. 468 pages. $7.50.

Biochemistry: An Introductory Text

By Felix Haurowitz, Indiana University. Treats general biochemistry at an introductory level, incorporating material on animal, plant, and bacterial biochemistry. It provides detailed coverage of the two recent major developments in biochemistry: the transfer reactions and energetics. There is also ample material on the body fluids and on the human organs and tissues 1955. 485 pages. $6.75.

Chemical Properties of Organic Compounds, An Introduction

By Elliot M. Marvell and Albert V. Logan, both of Oregon State College. Includes only those reactions most useful to non-major chemistry students. Discusses aliphatic and aromatic compounds separately, explaining the nature of each functional group. The authors have limited their material to the basic minimum which can be absorbed in the time generally allotted to this kind of course. 1955. 326 pages. $4.75.

Outlines of Enzyme Chemistry

By J. B. Neilands and Paul K. Stumpf, University of California, Berkeley. The major portion of this book is devoted to a discussion of the general properties of enzymes. The material starts with isolation, criteria of purity, and characterization methods, then passes on to kinetics, energetics, and metabolism patterns. "...a very useful contribution to the teaching of enzymology." —Science. 1955. 315 pages. $6.50.
EARTH SCIENCES

Elementary Crystallography: An Introduction to the Fundamental Geometrical Features of Crystals
By M. J. Buerger, The Massachusetts Institute of Technology. A penetrating study of the symmetry properties of crystals, which are basic to all other phases of crystallography. Offers a firm foundation in symmetry that can be easily understood with a background in simple mathematics. 1956. Approx. 362 pages. In press.

Atlas of Paleogeographic Maps of North America
By the late Charles Schuchert, formerly of Yale University. Prepared by one of the world's foremost paleogeographers, this work contains 84 maps which range through geologic time from the lower Cambrian period to the Pleistocene. They show the distribution of lands and seas and sedimentary deposition at every major stage of geologic history. 1955. 177 pages. $4.75.

The North American Midwest: A Regional Geography
Edited by John H. Garland, University of Illinois. Fifteen contributors present detailed geographic interpretations of significant Midwestern regions through concentration of the dominant qualities of the various human, cultural, and natural environmental associations. 1955. 252 pages. $6.75.

Evolution of the Vertebrates: The History of the Backboned Animals Through Time
By Edwin H. Colbert, American Museum of Natural History. Covering 400 million years of evolution coherently, the author illustrates the orders of vertebrates by giving short but thorough descriptions of typical animals in each of the basic orders. "It is the first really teachable book on the vertebrates that I have ever seen."—Professor Brooks F. Ellis, New York University. 1955. 479 pages. $7.50.

MATHEMATICS

Basic Mathematics for Science and Engineering
By the late P. G. Andres, formerly of Illinois Institute of Technology; Hugh J. Miser, United States Air Force; and H. Reingold, Illinois Institute of Technology. Discusses those topics of elementary mathematics which are basic to engineering theory and practice. Graphic methods are stressed. 1955. 846 pages. $6.75.

Elementary Topology
By Dick Wick Hall and Guilford L. Spencer II, both of the University of Maryland. The first elementary text on general point-set topology. After an introduction to set theory, the reader is introduced to the concepts of open sets, compactness, connectedness, and continuity in the real number system. 1955. 303 pages. $7.00.

PHYSICS

Physics: A Descriptive Interpretation
By C. H. Bachman, Syracuse University. Phenomena are displayed on a basis of size—from the microscopic to the cosmic. "The author has been remarkably successful in setting forth the findings of physics without emphasis on the mathematical basis ..." Professor Charles Williamson, Carnegie Institute of Technology. 1955. 497 pages. $5.50.

General Physics: A Textbook for Colleges
By the late Oswald Blackwood, formerly of the University of Pittsburgh; and William Kelly, University of Pittsburgh. "The book is certainly one of the better books on the market. I am particularly impressed by the illustrative problems and the well-thought-out text material."—Professor John R. Graham, Jr., Hobart College. 1955. 704 pages. $6.75.

PSYCHOLOGY

Student Workbook to Accompany An Introduction to Psychology
By Harry W. Karn, Carnegie Institute of Technology; and Joseph Weitz, Life Insurance Agency Management Association. Twenty-nine exercises serve to help the student understand the scientific approach of the psychologist to problems of adjustment. 1955. 140 pages. $1.60.

Measurement and Evaluation in Psychology and Education
By Robert L. Thorndike and Elizabeth P. Hagen, both of Teachers College, Columbia University. "The book is very thoroughly done. . . . The treatment of the testing methods in the areas of intelligence, aptitude and achievement is handled extremely well."—Professor John V. Gilmore, Boston University. 1955. 175 pages. $3.50.

. . . AND FROM ABROAD

Methuen Monographs
Distributed exclusively in the United States by John Wiley & Sons, this series of books in the fields of physics, chemistry, biology and biochemistry is intended to supply readers with a compact statement of modern positions in each subject. We offer a list of almost 60 titles, reasonably priced from $1.25 to $2.90.

Send for on-approval copies.

440 Fourth Ave., New York 16, N. Y.

2 December 1955
Rinco
Rotating
Vacuum-Type
Evaporator

For rapid evaporation of solvents of low volatility
Will speed evaporation rates from four to five times

Adaptable for volumes of 1 ml to 500 ml. Can be used in single or multiple units. It is especially advantageous with solvents such as water, dimethylformamide, etc.; e.g., at 29°C 30 ml of water will be evaporated in 30 minutes. Although especially useful with biological extracts or heat sensitive compounds, as no temperature increases are necessary, the instrument will, of course, operate satisfactorily at higher evaporation rates with increased temperature, where characteristics of sample permit. Consists of stainless steel shaft with a ST 19/38 at the lower end. Shaft rotates on oilite bronze bearings within a stainless steel housing having a ST 12/30 take-off leading to a pump. Although the instrument can be used with a standard aspirator, a standard pump and trap are recommended for superior results. Flasks held with the ST joint at end of shaft are rotated at 56 r.p.m. by means of a special motor. Provided with a ST 19/38 joint to accommodate smaller capacity flasks; e.g., 50 ml. With the addition of No. L80820D "Pyrex" brand adapter, the instrument will handle larger flasks having a ST 24/40 joint. For use on 110-115 volts, 60 cycle, A.C. Complete with motor, cord, ST 19/38 joint, but without No. L80820D, ST 20/40-19/38 adapter. Key to Sketch: (A) Stainless steel shaft with machined ST 19/38 joint at lower end. (B) Collar, with set screw. (C) Oilite bronze bearings. (D) 1/4-inch I.D. neoprene "O" ring(s). (E) Stainless steel housing equipped with ST 12/30 take-off for pump. (F) Flask.

L39474—Rinco Rotating Vacuum-type Evaporator, each $96.50
L80820D—Adapter—"Pyrex" Brand, for adapting ST 19/38 joint of Rinco Evaporator to larger flasks, each..............$ 1.70

LEITZ NEW FREEZING MICROTOME

Considerably larger than our standard freezing microtome, this sturdily built instrument has built-in specimen and cooling arrangements, thus eliminating all but one carbon dioxide cable. Sections may be cut at variable thicknesses from 2.5 to 50 microns. Adjustable object clamps are available, as well as paraffin and freezing stages of 50 and 35 mm. diameters. Guaranteed to give you better frozen sections more rapidly.

A reputation for integrity and a tradition of service have led thousands of scientific workers to bring their optical problems to Leitz. If you have problems in this field, why not let us help you with them?

See your Leitz dealer and examine these Leitz instruments soon. Write for information.

LENSES • CAMERAS • MICROSCOPES • BINOCULARS
BUILD A BIG 100 POWER, 3" REFLECTING TELESCOPE

With This Complete 87 Piece "Do-It-Yourself" Kit

Everything you need! No machine! Easily assembled! We furnish complete, simple instructions. Kit includes: 3" f/10 aluminized and overcoated Spherical Mirror—60X Eyepiece and 100X Barlow Lens—Crossline Finder—Fork type Equatorial Mount with locks on both axes—ventilated 3" Mirror—Mount—Wall, block—Telescope Tube. All nuts and bolts supplied. Nothing extra to buy. Our 3" spherical mirror (300 f.1) is guaranteed to resolve detail right up to theoretical limit. Your finished scope can also be used terrestrially. Money back guarantee—30 lbs. Stock No. 50,053-W—$29.50 f.o.b. Barrington, N. J.

INFRA-RED LIGHT and ITS USES

16 page illustrated booklet dealing with all phases of Infra-Red projects—including Telescopes, Infra-Red micro-scopy—photography, watch-dog systems and communications. Includes list of materials. Stock No. 9914-W—75¢ Postpacl.

INFRA-RED FILTERS 5¾ dia.

For use with infra-red telescopes, camera attachments, etc. Light from a 100-watt bulb passing through the filter is transformed into infra-red light source. Used on jeep headlights with infra-red driving projectors. A BIG SAVINGS. Stock No. 60,083-W—$2.00 ea. Postpaid.

INFRA-RED IMAGE TUBE

Used inside an infra-red telescope, this miniature tube converts infra-red rays to visible rays on the tube screen, which is viewable by an ocular. British Import. Cylindrical shape, approximately 2" diameter, 1¾" long. Requires standard vidicon-pack electrical source. Stock No. 50,046-W—$7.95 Postpaid.

50-150-300 Power MICROSCOPE

Low Price Yet Suitable for Classroom Use! Only 14.95

3 Achromatic Objective Lenses on Reversing Turret!

Imported! The color-corrected, cemented achromatic lenses in the objective gives you superior results to the single lenses found in the microscopes selling for $9.95! Results are worth the difference! Fine rack and pinion focusing. Stock No. 70,009-W—$14.95 Postpaid.

SPITZ JR. PLANETARIUM

Latest! Models nearly 400 stars, more than 70 constellations in their correct relationships. Use it in any darkened room. All the lenses, project on the ceiling. No batteries, works on ordinary household current. About 14½" high on a 7½" base. Projection sphere 7" diameter. Weight 3 lbs. 32-page book included free of extra cost. Contains valuable information about the stars, provides easy identification of the constellations. Also included—Illustrated pointer which plugs into Planetary. Stock No. 70,040-W—$14.95 Postpaid.

SKY 200 PROJECTOR fits above planetarium.

Stock No. 70,059-W—$3.98 Postpaid.

NEW! 2 in 1 Combination! Pocket-Size 50 POWER MICROSCOPE and 10 POWER TELESCOPE ONLY $4.50 ppd.

DIFFRACTION SPECTROSCOPE

Uses grating instead of prisms. Enables you to see what your photographic filters do... to see color characteristics of your photo light sources. You can attach to your camera for taking spectrums. A wonderfully useful and practical instrument. Imported from Germany. A real bargain. Stock No. 50,020-W—$14.70 Postpaid.

60° SPECTROMETER PRISM

Polished surfaces flat to ½ wave-length. Angle toler- ances 5 minutes. Dimensions of polished surfaces 18mm. x 30mm. Made from dense flint glass, free of stress and strain. Ideal for use with all models of spectrometers. Stock No. 30,148-W—$8.25 Postpaid.

IRIS DIAPHRAGM

Imported from Germany. Low cost. Use for building enlargers, camera, optical instruments, etc. With handy O.D. 2½". Maximum aperture—1%. Minimum aperture—½. Stock No. 30,118-W—$4.50 P.P.

WRITE FOR FREE CATALOG-W

Huge selection of lenses, objectives, prisms, for surplus optical instruments, parts and accessories. Telescopes, microscopes, binoculars, spectrums, reticles, mirrors, Ronchi rulings, lenses of other hard-to-get optical items. Note Long Work Distance 12.0 mm.

OCTOPUS COILLIMATOR

This instrument, an item of war surplus, was originally designed to check navigational instruments. It is being used by industry as a collimator for optical instruments, for testing lenses for definition, as a source of intense light, and for photography reticles at infinity. It is being purchased by many firms as a source for the fine line work which requires close proximity to the retina. Overall length 14½"; width of cradle 7½". Slightly used, but guaranteed in good working order. Shipping wt. 15 lbs. Stock No. 80,025-W—$95.00 f.o.b. Barrington, N. J.

OPTICAL COLLIMATOR

The system offered here will give you greater working distance under the microscope—on the objective to specimen, actually 12.0mm. Especially needed where some operation is to be performed. Also possible for viewing specimens of high temperatures or where viewing is required through transparent material. System operates very well under phase contrast conditions. This is of utmost importance wherever a field of potential uses particularly in dissection. With this attachment image reversal is eliminated. Made with standard threads. Height 1-25/32", diameter 1½". Stock No. 50,088-W—8mm.—mag. 29X—N.A. 0.574—$112.00 Postpaid.

Stock No. 50,089-W—4mm.—mag. 49X—N.A. 0.574—$114.00 Postpaid.
Coleman Jr. (MODEL 6) SPECTROPHOTOMETER

For rapid, routine analysis, control and research where only spectrochemistry is worked. Complete with plastic light shield, mounting pads, transmittance-density scale, operating directions and constant voltage transformer. For use on 110-120 volts, 60-cycle, A.C. only.

$460

Coleman Universal (MODEL 14) SPECTROPHOTOMETER

A multi-purpose instrument for spectrochemistry that can be adapted for photofluorometry, nephelometry and sectro and electro titrations. Supplied with top-carrier, filter, transmittance-density scale, mounting pads, operating directions and constant voltage transformer. For use on 110-120 volts, 60-cycle, A.C. only.

$635

COLEMAN FLAME PHOTOMETER

Measures Sodium, Potassium AND CALCIUM directly, easily and accurately

New and Exclusive Atomizer-Burner . . . Burns common illuminating gas or propane with oxygen for a stable high-temperature flame. No explosive tank gas required. Safe in the most inexperienced hands.

Simple Direct-Coupled Optics . . . No slits to adjust . . . no mirrors or prisms to align. Optical filters provide spectral isolation.

Direct Reading . . . Without internal standards, High temperature flame gives full excitation . . . eliminates need for chemical additives such as lithium.

Easy to Use . . . Safe in any laboratory. The Coleman Flame Photometer is as safe and easy to use as a Bunsen burner. Flame will not blow out or flashback, and pressure adjustments are not critical.

For users who prefer to conduct flame analysis independent of other procedures or who do not have available one of the above Coleman instruments, a separate indicating instrument . . . the Coleman Galv-O-Meter is offered.

Flame Photometer . . . . . ea. $450.00
Galv-O-Meter . . . . . . . . . ea. $150.00

FISTER’S MANUAL OF STANDARDIZED PROCEDURES FOR SPECTROPHOTOMETRIC CHEMISTRY

Contains 224 METHODS for the determination of 115 SUBSTANCES in various biological fluids. Includes 115 CALIBRATION CURVES and 6 CHARTS. 339 TESTS can be performed from the 728 PAGES of this manual that will pay for itself many times over.

$30.00

THE COMBINATION OF A COLEMAN SPECTROPHOTOMETER PLUS
FISTER’S MANUAL

assures the user the most accurate and simplest way possible to achieve the ultimate results in clinical chemistry. Ten years of analytical procedures have been built around the Coleman Spectrophotometers—ten years of service have proved their ability to increase output and to lower costs in the laboratory!

ALL THE APPARATUS, EQUIPMENT, SUPPLIES, CHEMICALS AND REAGENTS NEEDED TO RUN TODAY'S MODERN LABORATORIES.
FEEDING LABORATORY DOGS

By H. C. Schaefer, Director, Laboratory Chow Research

Dogs are valuable animals for research and testing in medical schools and research institutions. For their excellent service as research helpers, they deserve the best in care, housing, sanitation, and nutrition.

Purina has studied canine nutrition for more than a quarter of a century. This has included the nutrient requirements of dogs for maintenance, reproduction, and stress. In addition, there has been continuous study to learn the most economical, convenient, and palatable means of supplying the required nutrients.

The results of this research work have been incorporated into Purina Dog Chow Checkers and Purina Dog Chow Kibbled Meal.

Dog Chow Checkers are recommended for the maintenance of normal, healthy dogs. This product and fresh water should be kept before dogs at all times. About 1 lb. per day for 40-45 lbs. of body weight will keep dogs in excellent condition.

Dog Chow Kibbled Meal is recommended for dogs where palatability is a factor and where increased food intake is desired. This product was developed especially for dogs under stress of reproduction, lactation, growth, and circumstances associated with research investigations. It should be fed once or twice daily, moistened with water to make a desirable crumbly, hamburger-like consistency. A small percentage of raw or canned meat may be fed with Kibbled Meal to make it even more appetizing to dogs with poor appetites.
Centrifugal Baskets

Basket heads furnish an ideal solution to the problem of separating medium-sized batches of suspensions and emulsions which are difficult to handle. Separations are accelerated by the application of from 870 to 1900 times the force obtained in a gravity filtration or sedimentation. Material flow when using a perforated basket lined with filter paper to separate a slurry is shown in Figure 1. The use of a solid basket to clarify a liquor of a heavier solid or liquid contaminant is illustrated in Figure 2.

FOR BENCH SCALE LABORATORY APPLICATIONS

Chemical Model

Models for Hazardous or Non-hazardous Locations

Interchangeable solid or perforated baskets available in porcelain, bronze, monel, stainless steel and rubber-covered steel. The centrifuge can be operated continuously until the 300 ml. cake capacity of basket is reached. A total of 13 other heads for centrifuging material held in tubes (0.5 to 50 ml.) are also usable on the Chemical Model.

FOR LABORATORY OR PILOT PLANT APPLICATIONS

Model U Centrifuge

5, 8 and 11 Inch Baskets

For Non-hazardous Locations

Interchangeable solid or perforated baskets available in bronze or stainless steel (other materials to order). The centrifuge can be operated continuously until the cake capacity of the basket is reached. Operating capacities and characteristics of the various sized baskets are as follows:

<table>
<thead>
<tr>
<th>Basket Dia.</th>
<th>Cake Cap.</th>
<th>Max. R.P.M.</th>
<th>Max. Force</th>
</tr>
</thead>
<tbody>
<tr>
<td>5 inch</td>
<td>300 ml.</td>
<td>4000</td>
<td>1130 x G.</td>
</tr>
<tr>
<td>8 inch</td>
<td>1500 ml.</td>
<td>3500</td>
<td>1390 x G.</td>
</tr>
<tr>
<td>11 inch</td>
<td>3000 ml.</td>
<td>3500</td>
<td>1900 x G.</td>
</tr>
</tbody>
</table>

A total of 39 other heads for centrifuging material held in tubes or bottles (10 to 600 ml. capacity) are also usable on the Model U Centrifuge.

Model BE50 Centrifuge

5, 8 and 11 Inch Baskets

For Class I, Group D Locations

Interchangeable solid or perforated baskets available in bronze or stainless steel (other materials to order). The centrifuge can be operated continuously until the cake capacity of the basket is reached. Operating capacities and characteristics of the various sized baskets are as follows:

<table>
<thead>
<tr>
<th>Basket Dia.</th>
<th>Cake Cap.</th>
<th>Max. R.P.M.</th>
<th>Force</th>
</tr>
</thead>
<tbody>
<tr>
<td>5 inch</td>
<td>300 ml.</td>
<td>3500</td>
<td>870 x G.</td>
</tr>
<tr>
<td>8 inch</td>
<td>1500 ml.</td>
<td>3500</td>
<td>1390 x G.</td>
</tr>
<tr>
<td>11 inch</td>
<td>3000 ml.</td>
<td>3500</td>
<td>1900 x G.</td>
</tr>
</tbody>
</table>

A total of 32 other heads for centrifuging material held in tubes or bottles (10 to 600 ml. capacity) are also usable on the Model BE50.

Size 3, Model FS

Models for Hazardous or Non-hazardous Locations

Interchangeable solid or perforated baskets are available in bronze (other materials to order). The centrifuge can be operated continuously until the 11.5 liter cake capacity of the basket is reached. At the maximum basket speed of 2500 r.p.m. a force of 1250 x G is available to effect the desired separation. Three other heads for centrifuging material held in tubes or bottles (10 to 1300 ml. capacity) are also usable on the Size 3, Model FS Centrifuge. Send for descriptive Bulletin L.
MICROPRINT CARDS

New Kodagraph Microprint Reader makes them a pleasure to read.

The microprint idea can reduce the largest library to a small set of cards. Sixty conventional pages can go on a 3 x 5-inch card, with an abstract and filing data in ordinary-size type on the other side.

The Kodagraph Microprint Reader lets you read in complete comfort. The screen is green and tilted 11° because that's the combination that seems to be easiest on the eyes. It's bright enough to use in ordinary room light. Several people can read at a time.

You feed microprint cards into a Kodagraph Microprint Reader like paper into a typewriter—any size up to 8½ x 14 inches.

Many publishers offer microprint card editions. Many are also prepared to make microprint cards for you from your own literature and reports.

To get started on a microprint system that can help solve the problems of debulking, speedy dissemination, and storage of literature and private internal data, mail the coupon below.

EASTMAN KODAK COMPANY

Business Photo Methods Division, Rochester 4, N. Y.

Please send me the information checked:

☐ Where I can see a Kodagraph Microprint Reader.
☐ Folder on the reader and sample microprint card.
☐ List of publishers of microprint cards and manufacturers of microprint cards to order.

SCIENCE, VOL. 122
REVOLUTIONARY MICRO-PROJECTOR COMBINES PRECISION AND CONVENIENCE

THE

MICRO-VIEWSCOPE

... one compact unit houses MICROSCOPE, ILLUMINATING SYSTEM and PROJECTION SCREEN

Contributed to the advancement of science, the Reichert "Micro-VIEWScope" is designed to give brilliant images of excellent resolution on its own projection screen providing utmost ease of viewing.

Here in one unit is a microscope with built-in illuminating system and projector that throws clearly defined images on an 8 inch viewing screen.

There is no eye fatigue. Specimen is placed on the mechanical stage and brought into sharp focus by the coarse and fine focusing controls of the "Micro-VIEWScope." Groups can observe and inspect the image... as in classroom and lectures.

Range of magnifications is 75 X to 1,000 X. Accessories for polarized light and photomicrography can be provided.

WRITE, PHONE, OR WIRE FOR DETAILED INFORMATION

ALSO ASK ABOUT: Zetopan - the world's most advanced research microscope, with the new "Anoptral" phase equipment... built-in illumination system... universal condenser... elimination of spherical aberration.

"Fluores" equipment - for fluorescence microscopy... has arc lamps of low and high intensity... especially designed for histological work and examination of antigen antibody reactions.

Common or rare, the gases you need are supplied by MATHESON in the PUREST FORMS AVAILABLE!

Any gas mixture for instrument calibrating, heat treating, nuclear flow counters, chemical processing, or for any other purpose can be supplied in all cylinder sizes, including lecture bottles.

OUR CATALOG — Listing 71 gases, gives the gas user complete information on:
- CYLINDER PRESSURE, for each gas, at 70° F.
- GAS PURITY
- CYLINDER DIMENSIONS
- RECOMMENDED PRESSURE AND FLOW CONTROLS
- VALVE OUTLET TYPES
- AVAILABLE MIXTURES

NUCLEAR CORPORATION
OF AMERICA, INC.

For the first time, a national corporation has been founded specifically to serve you—the nuclear instrument user. Expanded personnel and facilities now available make it possible for NRD INSTRUMENT COMPANY to offer a more complete line of instruments for medical, research and teaching purposes. Development plans include automatic counters of many kinds for biological and physical measurements, as well as many new instruments to extend the applications of radioactivity into industry. Whatever your radioisotope problem, write NRD for assistance. We will be glad to furnish our catalogs and recommendations without obligation.

• Versatile teaching tool

• Compact, handy

Here's a new general science teaching instrument that's easy on your budget. It combines the advantages of a low-power microscope with the compactness of a magnifier. And you'll keep it busy enough to get more than your money's worth out of it. Ideal for gross specimen studies and dissection; convenient for field trips. Available with folding tripod or sturdy stand.

Upright images are sharp and detailed to the very edge of the extremely wide field of view. Long working distance makes it easy to manipulate specimens. Slide-tube focus is quick and easy. (Also available as straight tube, for use when upright image is not required.)

Use it in tripod...

...or in sturdy stand

Write TODAY FOR DATA AND DEMONSTRATION

Electrophoresis-Diffusion facilities for high-precision research uses are combined in the Spinco Model H Electrophoresis-Diffusion instrument, illustrated. Having multiple optical systems arranged for rapid and efficient use, an optimum of automatic controls, and a single-unit construction, the instrument features ease and convenience of operation.

With the development of this unit, reliable, reproducible laboratory procedures are routine in the isolation, separation, and identification of materials having electrically active particles. New applications are constantly developing in the fields of complex-colloid analysis, production control of purified proteins, and the discovery of new factors.

For data on this new instrument, or on Spinco ultracentrifuges—the world-wide standard in their field—write:

Experimental Design: Theory and Application
By WALTER T. FEDERER

Presenting subject matter and techniques currently unavailable in other texts, Professor Federer discusses thoroughly and comprehensively the advantages, disadvantages, experimental lay-out and analysis of various types of design. In most cases, a numerical example and variations in the basic design are included, along with a list of problems and citations to numerous examples of the design.

Published in the Late Fall

Methods In Numerical Analysis
By KAJ L. NIELSON

With an emphasis on the most recent developments in the field of numerical analysis, Dr. Nielson considers the analysis of tabulated data and the numerical methods of finding the solutions to equations. The text includes illustrative examples, valuable schematics and tables of necessary mathematical constants.

To be published Early 1956

Physics
By J. S. MARSHALL
and E. R. POUNDER

This text offers a thorough introduction to the elements of physics, sufficiently rigorous and quantitative to develop the sense of proportion essential to further study in engineering and the physical sciences. The authors utilize atomic theory throughout the book to explain large-scale phenomena of physics. In addition, they have included a final chapter dealing exclusively with atomic and nuclear physics.

This quantitative analysis took only 23 minutes on the new P-E Vapor Fractometer that costs only $1,375

HOW LONG WOULD IT TAKE YOU?

Employing the principles of gas chromatography; P-E's new vapor fractometer is a revolutionary advance in the field of gas and volatile-liquid quantitative analysis. It is fast, precise, uncomplicated to operate, extremely simple in calculation, and above all, many times less expensive than distillation columns, mass spectrometer, or any other instrument for the purpose.

For qualitative analysis, the instrument gives extremely clean separations—even of components and isomers which cannot be separated by ordinary methods. For trace analysis, high sensitivity permits use of extremely small samples.

Take, for example, the analysis of a synthetic LPG mix shown above. Here 12 components, representing the hydrocarbons most frequently encountered, were clearly separated—a job extremely difficult to accomplish by ordinary vacuum distillation methods. The perfect shape of the recorder bands makes quantitative analysis simple and accurate. Area under each peak is the measure of the mole % concentration of the component. These area relationships are all that is needed for calculation, without preliminary calibration for each individual component. There is no faster, no simpler, no more inexpensive method in existence today.
