NEW!

BAUSCH & LOMB
WIDE FIELD
MACROSCOPES
10X, 20X, or 40X

• Versatile teaching tool
• Compact, handy

Here's a new general science teaching instrument that's easy on your budget. It combines the advantages of a low-power microscope with the compactness of a magnifier. And you'll keep it busy enough to get more than your money's worth out of it. Ideal for gross specimen studies and dissection; convenient for field trips. Available with folding tripod or sturdy stand.

Upright images are sharp and detailed to the very edge of the extremely wide field of view. Long working distance makes it easy to manipulate specimens. Slide-tube focus is quick and easy. (Also available as straight tube, for use when upright image is not required.)

America's only complete optical source...from glass to finished product.
The advantages of micro-projection . . . permitting the showing of microscope slides to a group of scientists or students as well as pointing out specific details in the projected object . . . have not been fully utilized because of the complicated handling of micro-projectors that were thus far available.

With the new Carl Zeiss Revolver Micro Projector apparatus, these difficulties are completely eliminated. Six objectives coupled mechanically to suitable condensers together with special projection eyepieces instantly project an image on the screen from low (macro) up to high magnifications. All objectives are parfocal and the matched condensers provide illumination by the Koehler principle. Thereby best resolution and greatest brightness of images are assured.

Special projection eyepieces guarantee favorable fields of view, even at long projection distances. A fully automatic carbon arc lamp eliminates frequent manual adjustment, so that even untrained operators can easily handle this projector.

The Revolver Micro Projector can be quickly converted into a lantern slide projector for 2 x 2-in. slides by merely swinging a reflecting mirror, a condenser and a projection lens into the path of rays.

CARL ZEISS, INC., 485 FIFTH AVENUE, NEW YORK 17, N.Y.

Guaranteed uninterrupted repair service
Peerless Performance

CITOPLAST
Stereoscopic
Dissecting Microscope

An unsurpassed instrument embodying every known advance in microscopy.

- Rotatable magnification changer with five built-in parfocal objectives
- All optics fully "T-coated" to provide unusual width and depth of field plus exceptional freedom from glare
- Magnification range 4x to 100x
- Constant working distance of 4" at all magnifications
- Lamp attached to integral arc for centering light at every angle
- Accessories for transmitted light, photomicrography and dissecting
- Exceptional brilliantly resolved erect three-dimensional image
- Adjustable for dioptric variations

7X®

Used by Leading Laboratories for Cleaning All Types of Laboratory Glassware

NON-TOXIC FOR TISSUE CULTURE

- 7X is a concentrated liquid for use where a high degree of cleanliness is required.
- 7X is instantly and completely soluble in any concentration without agitation.
- 7X rinses and drains completely, quickly; does not leave a film.

Available from your laboratory supply dealer, or write direct for complete information.

Albert Einstein was born in Ulm, Germany, on 14 March 1879. He received his doctorate from the Swiss Federal Polytechnic Institute at Zurich in 1906. From 1902 to 1909 he was a patent examiner in the Swiss Federal Patent Office. In swift succession he held academic chairs at the University of Zurich, the University of Prague, and the Swiss Federal Polytechnic Institute. In 1914 he accepted membership and a professorial staff position in the Prussian Academy of Sciences at Berlin, one of the most honored and independent academic positions. (Continued on page 487)
A NEW CORNELL RECORD. The shrill symphony of forty varieties of insects!

The SONGS of INSECTS

CALLS OF THE COMMON CRICKETS, GRASSHOPPERS, AND CICADAS OF EASTERN UNITED STATES

Recorded by Richard D. Alexander and Donald J. Borror, Department of Zoology and Entomology, Ohio State University. Produced by P. P. Kellogg and A. A. Allen for the Laboratory of Ornithology, Cornell University.

A new listening experience is brought to you on this record, just released by Cornell University Records. The extremely high frequencies of insect songs make their recording a severe test of the best recording equipment, as well as a trial of the patience and skill of the operator.

Professional and amateur entomologists, as well as collectors of off-the-beaten-track recordings will wish to own this concert of primeval instrumentalists of the fields and backyards.

Complete listing of insects heard on this record sent on request.

12-inch, vinylite record, two sides, 33 1/3 rpm $7.75

"The recordings are excellent both in the reproduction of single voices and in that the calls are heard against a background of natural sounds."—Dr. Coleman J. Goin, University of Florida, in Copeia

Voices of the Night

THE CALLS OF 34 FROGS AND TOADS OF THE UNITED STATES AND CANADA

Music of the ponds, creeks, pools, and marshes is here performed by nature's strangest songsters. "Warmly recommended."—High Fidelity
