Teddy Roosevelt was President. The age of Victorian splendor was in full swing. And incandescent gas lamps were lighting America. The heart of these glowing lamps was the gas mantle—made, for the most part, of thorium.

Lindsay was a famous name in the gas-light era, a major producer of gas mantles.

The manufacture of gas mantles calls for the impregnation of a knit fabric cone of ramie or rayon with thorium nitrate and cerous nitrate. The organic fiber is burned off, leaving a relic structure of thorium and cerium oxide which glows white hot in a gas flame.

Around 1920, gas illumination was largely supplanted by electric lighting. Demand for thorium dropped. Then came the atomic age. Thorium again became important because of its value as a reactor fuel breeder.

At the present, there are two systems in which thorium can be used as a fuel material breeder. One is the use of metal or a thorium-bismuth alloy; the other, a thorium oxide slurry reactor. Both procedures are being investigated by the AEC and private industry. It is believed that at the assumed burnup rate of thorium oxide (one pound of ThO₂ for six megawatt hours of electrical energy) the thorium-rare earth industry is probably capable of handling domestic demands without excessive expansion. Thorium looks good as a reactor fuel for private industry because it is much more plentiful and economical than uranium.

So much for the Buck Rogers stuff . . . what's ahead for thorium, excluding the energy field? The answer to that is "plenty" and chances are it can be of immense value to you—it already is in a number of industries.

The most common thorium salts are the nitrates, oxides, fluorides and chlorides. Lindsay produces all of them in purity ranges from that required for ordinary technical use to the most critical "reactor" grade where extremely high purity is a must.

Let's see how some of these salts are being used in industry. Perhaps you'll see a potentially profitable use for them in your own operations.

\[ \text{Th(NO}_3\text{)}_4 \cdot 4\text{H}_2\text{O} \] — Manufacture of incandescent gas mantles. A starting material for other thorium compounds and thorium metal. Nitrate is the standard commercial thorium salt.

\[ \text{ThO}_2 \] — Thorium oxide has the highest melting point of any metallic oxide (3220 °C) and has use as a refractory material. It is also used with lanthanum oxide in the production of "rare-element" optical glass for unbelievably accurate aerial camera lenses. It is a source material for making thorium metal. The AEC and several private companies are studying its use in a thorium oxide-water slurry reactor. It has some use as a catalyst.

Thorium-magnesium alloys have high strength, good creep resistance and elastic modulus values in the 600-700 °F temperature range and are used in jet engine castings, supersonic airframe constructions and satellite rockets where high temperature service is required.

Thoriated tungsten (tungsten containing 1 to 2% ThO₂) is used as a filament in electron tubes and as non-consumable electrodes in inert gas-shielded arc welding.

Lindsay is the oldest and largest producer of thorium compounds for the government and private industry but we don't make thorium metal. Naturally, since we've been in the business 54 years, we've learned a good deal about this remarkable, versatile element. Data is available to you and the counsel of our technical staff is yours for the asking.

We feel certain that thorium has enormous potentials in a variety of industries and we want to share our knowledge with you. If you think that thorium chemicals may be useful in improving one or more of your products or processes—or in the development of new products—let us be of help.
International

centrifuge model CM

... for routine centrifuging

Designed for the moderate budget, the Model CM is a heavy-duty Centrifuge for all ordinary applications where very high speeds are not essential. It is an unusually versatile unit with interchangeable analytical heads for spinning tubes and bottles in the angle and horizontal positions and basket style heads for filtration and clarification.

EMPHASIS ON FUNCTIONAL EFFICIENCY

All operating units are completely enclosed in a handsomely modern functional cabinet of two piece construction, which incorporates shelves for extra heads and features International's new "Stor-a-Door" for storing shields and trunnion rings. Controls are easily accessible and indicators are on eye-level angle for utmost efficiency.

...with Emphasis on Functional Efficiency

NEW IMPORTANT FEATURES

Stainless Steel Guard Bowl, corrosion resistant, easy to clean, no paint to chip or peel.

Finger Touch Brake, for safe, smooth deceleration.

Autotransformer, stepless speed control without heating.

Electric Tachometer, non-mechanical continuous speed indication.

Permanent Speed and Force Table, for quick reference.

Two-Piece Construction, for use as bench-Model Centrifuge when desired.

SPECIFICATIONS

Speed — 1200 to 4500 r.p.m. — 290 to 3200 G.

Capacity — 15, 50, 100 ml. tubes; 250 ml. bottles; 3 liter baskets.

Height — 39", Width — 20", Depth — 23".

International Equipment Co.

1284 SOLDIERS FIELD ROAD • BOSTON 35, MASSACHUSETTS
These new shakers will rotate as many as 40 250 ml flasks or 28 500 ml flasks at one time. Two models provide continuous shaking; ranges are 50 to 150 r.p.m. and 125 to 350 r.p.m. Platform rotates thru a 1½” circle in the horizontal plane.

Flask Carrier Measures 32 inches by 20 inches.

Cenco®

Improved

Refrigerated Incubator

The temperature control knob, pilot light and thermometer are all located on the front and can be easily reached without opening the door.

No. 46043 Cenco Refrigerated Incubator, 115 v. 50/160 cy., A.C. $475.00

For full details, write for Circular No. 1267.

This constant temperature refrigerator is designed for incubation at any temperature in the range from 5°C to 50°C with variations not exceeding 1°C in any part of the incubator. It meets the standard methods requirements for the bacterial analysis of water and dairy products and the dissolved oxygen (DO) and biochemical oxygen demand (BOD) in water, sewage, sewage effluent and industrial wastes.

Temperature is controlled from outside the refrigerator by setting the convenient dial indicator on the door. Exact inside temperature is shown on the easy-to-read thermometer. A pilot light shows when the heater is in operation.

The entire unit is extremely well built, thoroughly insulated and equipped with a highly efficient heating unit. It is porcelain-enameded throughout and will hold 120 BOD bottles of 190-ml size or 105 bottles of 300-ml size. Additional storage space is provided by racks on the door.

FLUORESCENCE MICROSCOPY is becoming increasingly important in fundamental research, histology and physiology, as well as clinical and diagnostic routine examinations in haematology, bacteriology and parasitology.

THE CARL ZEISS LARGE FLUORESCENCE EQUIPMENT was especially designed to completely fulfill the requirements of modern fluorescence microscopy. Ultraviolet or blue-violet excitation is established by means of special filter combinations, permitting fluorescence observation over the entire range of the visible spectrum. Transparent as well as opaque specimens can be examined with this equipment.

A high-pressure mercury vapor burner produces such intense luminosity that the equipment is not only suitable for observation but also photomicrography. For this type of work we recommend the well-known Attachment Camera with beam-splitting prism for fluorescent light and camera body for 35mm color or black-and-white films.

Guaranteed uninterrupted repair service
Making electrons more versatile

Dr. P. E. Pashler of General Electric studies the basic phenomena associated with electronic devices

Hearing, speaking, and seeing are among the "human" functions that electronic equipment has been performing since the birth of radio and television. Newer electronic systems demand devices that also can read, write, remember, and calculate.

Dr. P. E. Pashler and a group of his associates at the General Electric Research Laboratory are seeking a better understanding of the basic principles of electronic materials and devices through studies of such fundamental phenomena as secondary electron emission and noise in electron tubes.

Among the recent accomplishments of Dr. Pashler's Applied Physics Section are the improvement of photoconductors to give camera tubes the special sensitivity and quick response required for x-ray television, and the development of an information storage tube with a tiny memory cell only an inch square that will remember nearly a million "bits" of information.

As we see it, providing scientists with freedom and incentive to extend the frontiers of knowledge is fundamental to the creation of better products, better jobs, and more opportunities for human satisfactions.

Progress Is Our Most Important Product

GENERAL ELECTRIC
HETEROCYCLIC COMPOUNDS
Vols. V and VI
Edited by Robert C. Elderfield, University of Michigan.
Chemical principles involved in syntheses and reactions of
the various compounds are emphasized.
Volume V: Five-Membered Heterocycles Containing Two
Hetero Atoms and Their Benzo Derivatives.
CONTENTS: 1,3-Dioxolane and Derivatives. Pyrazoles and
Related Compounds. Indazoles. Imidazoles and Condensed
Imidazoles. Oxazoles and its Derivatives. Benzoazoles and
Related Systems. Isoxazoles. Thiourea and Benzothiazoles.
Volume VI: Six-Membered Heterocycles Containing Two
Hetero Atoms and Their Benzo Derivatives.
CONTENTS: The Chemistry of the Monocyclic Dioxanes.
Cinnolines and Related Compounds. Phthalazine and its
Derivatives. Pyrimidine and Its Derivatives. The Chemistry of
Quinazoline. The Pyrazines and Piperazines. The Quino-
oxalines. The Monocyclic Oxazines. The Benzoxazines. Thi-
zines and Benzothiazines. Phenazines, Phenoazines, and
Prob. $21.00.

ON HUMAN COMMUNICATION
By Colin Cherry, University of London. This book con-
ists of a series of clearly written essays which attempt to
review recent trends in the study of human communication.
It discusses the growth of modern interest in the relation-
ships existing between such communication sciences as:
linguistics, cybernetics, psychology, semantics, and phonet-
ics. It analyzes the work done so far in these areas, shows
how they are steadily moving toward unification, and, in
addition, points out the extent to which controversy and
difference of opinion tend to keep them apart.
The author has tried to outline the main viewpoints of
many authorities working in communication disciplines—
from a critical position. His approach cuts across a very
wide field of the literature. Consequently, the work emerges
as a comprehensive "source book" of references, citations,

ORGANIC SYNTHESSES
Vol. 36
Editor-in-Chief: N. J. Leonard, University of Illinois.
Dealing with 35 important new syntheses, this latest vol-
ume in the well-known annual series gathers together the
work of 62 contributors. Like its predecessors, the work
gives you the most convenient laboratory methods for pre-
paring a wide variety of organic chemical reagents. Every
experiment has been carefully checked and tested.
CONTENTS: Bischloromethyl Ether. α-Chlorophenylacetic
Acid. N-2-Cyanoethyl-anilide. 1-Cyano-3-phenylurea. 1,2-
Cyclodecanediol. Cyclodecanone. Diazomethane. 1,1-Dich-
loro-2,2-difluoroethylene. N,N-Diethylbenzidine. N,N-Di-
methylbenzenoic. Ethyl Diazocacetate. β-Ethyl-β-methyl-
glutaric Acid. Ferrocene. 2-Furoic Acid. D-Gulonic-γ-lac-
tone. n-Hexyl Fluoride. 6-Hydroxynicotinic Acid. 4-Iodo-
veratrole. Laurylmethylamine. β-Methoxyphenylacetonitrile.
3-Methyl-4-nitropyridine-1-oxide. α-Naphthyl Isothiocya-
nate. o- and β-Nitrobenzaldiacetate. 1,4-Pentadiene. N-
Phenylbenzamidine. Propiolaldehyde. Putrescine Dihy-
chloride. 2-Pyrrolealdehyde. Sebacil. Sebacoin. α-Sulfopami-
tic Acid. Tetraethyltin. Tetrahydrothiophene. β-Toluene-
sulfonic Anhydride. 2,4,6-Tribromobenzoic Acid. Index.
1956. 120 pages. Prob. $3.75.

CURRENTS, FIELDS,
AND PARTICLES
By Francis Bitter, The Massachusetts Institute of Tech-
ology. Describes—in a novel and refreshing manner—
macroscopic electromagnetic phenomena in terms of fields
and microscopic atomic phenomena in terms of quanta. Of-
fers a solid introduction to certain abstract concepts, among
them energy, momentum, electric and magnetic fields, con-
ervation laws, impedance, reaction, etc. The author has
attempted to illustrate the importance of quantitative
thinking, and, although a great deal of factual material is
included, the emphasis is on analysis. Co-published by The

New Methuen Monographs . . .

A photoelectric precision instrument for the rapid and convenient evaluation of strips and sheets of filter paper in partition chromatography and paper electrophoresis.

PHOTOVOLT Densitometer

for Partition Chromatography and Paper Electrophoresis

One 19" x 19" Lab-aid unit section holds up to 6500 1" microslides

other bulky files need this much more space to hold as many slides

because every inside inch is a filing inch

a Lab-aid cabinet files 45% more

There's no waste space in a Lab-aid cabinet... no thick bulkheads, no massive tracking guides. Thanks to patented Lab-aid construction, they are built of heavy steel, strongly welded, true-tracking, beautifully finished, and... drawers are freely interchangeable, too... you can file 1" and 2" microslides, even 4" lantern slides or index cards, in the same section if need be. All are 19" x 19" square, so they stack rigidly to any height.

New RONALD Books . . .

A World Geography of Forest Resources
Edited for the American Geographical Society by Stephen Haden-Guest; John K. Wright; and Eileen M. Teclaff with 34 Contributing Authorities. This comprehensive appraisal discusses world forests as the source of indispensable materials. Thoroughly documented, abundantly illustrated, a-d mapped, book details what these materials are, their uses, a-d their origin. It carefully points out the relationship to rainfall and temperature; to relief and soils; to human population; and to human institutions and needs. 167 ills., maps, 87 tables, 736 pp. $12.50

NATURAL HISTORY OF BIRDS
Leonard W. Wing. An introductory guide to ornithology, this attractively illustrated book offers a concise study of birds in nature—their adaptations, origins, evolution, distribution, and abundance. It covers bird anatomy, plus such topics as heredity; age; sex; nesting; health; migration; and the ecological, territorial, and economic relations of birds. It includes details on plumage, song, classification, nomenclature, and bird study afield. 282 ills., tables, 345 pp. $6.75

Evolution: The Ages and Tomorrow
G. Murray McKinley. The documentation of an original, stimulating thesis of the unity of mind, matter, and energy, and the purposeful drive of evolution. Fascinating examples and observations drawn from the animal world illustrate this thought-provoking study, providing many sound insights into the natural world. "The only book I know which systematically brings new knowledge to bear upon the whole subject of evolution." —Joseph Wood Krutch. 273 pp. $4
