The American Association for the Advancement of Science, publishing the official notices and proceedings of the American Association for the Advancement of Science.

Friday, June 21, 1901.

CONTENTS:
The American Association for the Advancement of Science................................................................. 961
A Kinetic Theory of Evolution: O. F. Cook.......................................................... 969
Miles Rock: William Embeeck.......................................................... 978
Otto Lugger: Dr. L. O. Howard.......................................................... 980
Scientific Books:—
   Found and Climates on the Phytogeography of Nebraska: Professor Arthur Hollick.
   Simpson's Synopsis of the Naiades: Professor T. D. A. Cockerell.................................................. 981
Scientific Journals and Articles.......................................................... 984
Societies and Academies:—
Discussion and Correspondence:—
   Remarkable Discoveries. An Earthwork Discovered in Michigan: Harlan L. Smith. Physiology in the Schools: Professor S. W. Williston.................................................. 987
Shorter Articles:—
   What is Life? Professor Joseph Le Conte. A 'Sand Bowl': Professor James E. Talmage.................................................. 991
Notes on Inorganic Chemistry:—
   Platinum in Antiquity: Lead in Pottery Glasses; Osmic Diffusion of Vanadium: J. L. H.................................................. 993
Current Notes on Meteorology:—
   Annals of the Mount Blanc Observatory: The Moon and the Weather: Notes: H. De C. Ward.................................................. 993
Scientific Positions Under the Government .................................................. 994
The American Association .................................................. 995
Convocation Week .................................................. 996
Scientific Notes and News .................................................. 996
University and Educational News .................................................. 999

MSS. intended for publication and books, etc., intended for review should be sent to the responsible editor, Professor J. McKeen Cattell, Garrison-on-Hudson, N. Y.

The American Association for the Advancement of Science.

A national association for the advancement of science occupies at the beginning of the twentieth century a dominant position. The greatest achievement of the nineteenth century was the progress of science; its most definite tendency was towards the voluntary organization of individuals for the accomplishment of certain ends. The advance of science, the movement that is of the greatest importance for civilization, requires for its guidance the strongest association of individuals. Such an association will certainly arise, and will develop from existing institutions.

The organization of science in America has progressed parallel to the advance of science. Local societies concerned with the whole field of knowledge, and especially with its utilitarian aspects, were first established in Philadelphia, in Boston and in other cities. These societies were modeled on the similar institutions of Europe; the Philosophical Society of Philadelphia following the Royal Society of London, and the Academy of Arts and Sciences of Boston, the Paris Academy of Sciences. As centers of scientific activity increased in number,
