Articles

Study of Fast Events: W. G. Sykes ..........................................

Very fine time resolution can be obtained with techniques used in research on explosives.

Modern Instruments for Surveying and Mapping: G. D. Whitmore,
M. M. Thompson, J. L. Speert ........................................... 1059

New surveying systems utilizing photogrammetry and electronics speed production of topographic maps.

The Brookhaven Medical Research Reactor: L. E. Farr ................. 1067

The first nuclear reactor designed specifically for medical research and therapy is described.

X-ray Emission from Television Sets: C. B. Braestrup and R. T. Mooney ........ 1071

The gonad dose to the population is evaluated on the basis of laboratory and field measurements.

Respiratory Carbon Dioxide Response Curve Computer: J. W. Bellville and
J. C. Seed .................................................................. 1079

It gives more complete alveolar ventilation-$P_{CO_2}$ response curves than could formerly be obtained.

A Simplified Microspectrophotometer: G. K. Strother and J. J. Wolken ........ 1084

Cadmium selenide cells are well suited for absorption microspectroscopy of pigments in living systems.

Implantable flow transducers facilitate circulatory studies in conscious and free-moving animals.
