Editorial  The Well-Rounded Man ........................................ 1393

Articles  The Optical Spectrum of Lightning: L. E. Salanave .......... 1395
A revival of the spectrographic study of lightning may help solve some outstanding puzzles in cloud physics.

Federal Support of Research Careers: J. A. Shannon and C. V. Kidd 1399
Government joins universities to increase the number of career appointments in research.

Biochemistry of Aging: F. M. Sinex .................................. 1402
The mechanism of aging presents a challenge to modern biochemistry and biology.

Book Reviews  Culture in History, reviewed by E. A. Hoebel; other reviews .......................... 1411

Reports  Use of Fat-Soluble Fluorescent Brighteners on Microorganisms: R. M. Lycette and L. R. Hedrick 1415

Correlation of Chemical Structure and Taste in the Saccharin Series: G. H. Hamor 1416

Recent Change in the Pattern of Tree Growth in Northern Arizona: W. S. Glock, S. R. Agerter, D. G. Smith 1417

Interocular Transfer of Pattern Discrimination without Prior Binocular Experience: R. A. McCleary and L. A. Longfellow 1418

Radar Observation of Venus: I. Maron, G. Luchak, W. Blitzstein 1419

On the Site of Action of Amethopterin: P. T. Condit 1421

An Overview of Sleep as an Experimental Variable (1940–1959): W. B. Webb 1421

Miniature Subcutaneous Frequency-Modulated Transmitter for Brain Potentials: C. J. Sperry, Jr., et al. 1423

Passage of Saccharides from Cerebrospinal Fluid to Blood: L. D. Prockop, L. S. Schanker, B. B. Brodie 1424

National Academy of Sciences: Abstracts of papers presented at the autumn meeting 1425

Association Affairs  128th Annual Meeting: Program Summary .................. 1438

Departments  Forthcoming Events .................................... 1440

Cover  Graphite cloth, single-ply plain weave, reinforced with clear plastic. Each yarn bundle contains 1440 graphite filaments. Fabrics or filaments are combined with plastic resins for molding of missile and rocket motor components. This specimen was prepared by slicing parallel to one direction of the cloth before examination under the microscope (about × 150). [National Carbon Company]
