<b>Cover</b>	Yucca Flat, Nevada test site, from the mesa in the northwest corner. The pinyon pine tree in the foreground stands on the lip of a crater formed by the venting of a partially contained underground shot (Blanca, October 1958) entombed in the mesa slope. The pinyon was one of the three plant species killed by apparent disruption of the root systems, while other species survived. See page 38.
