A Mystery Story without the Mystery

Articles

The Hasanlu Project: R. H. Dyson, Jr.

Archeologists, working with natural scientists, delineate life in a 1000 B.C. town of Azerbaijan.

On the Feasibility of Peace: G. Piel

A world without war is no less plausible and no more difficult than a world built on thermonuclear threat.

News and Comment

Communication satellites . . . Cuts in Atomic Energy Commission’s civilian program . . . No progress reported in Soviet-American exchange agreement

Book Reviews

Law and Policy in International Decisions: R. Fisher

Urging decision-makers to cut international law to fit their policies undermines the basic policy of having law.

K. Esau’s Plants, Viruses, and Insects, reviewed by K. M. Smith; other reviews

Blood Preservation and Blood Substitutes; Forthcoming Events

Cover

Virus particles isolated from a human wart. The preparation was treated by the negative staining method. There are 42 subunits (capsomeres) on the protein coat (the capsid) arranged in 5:3:2 axial symmetry (x 250,000). [A. F. Howatson, Department of Medical Biophysics, University of Toronto, Toronto, Ontario, Canada]
