STAPH and HEPATITIS

THAT “LURK” EVERYWHERE

Control disease effectively with “no-lick” Time Tapes and Labels. Messy dressings, bacteria laden specimen collections, blood samples and sputum—all must be serviced by hand. Be safe! Be sure . . . one of the best ways to eliminate contact and stop infectious spreading is by using satin finish, vinyl coated Time Tapes or Labels. Labels will accept pen or pencil marking or may be pre-printed to your “customized” specifications.

Your request will bring complete details, samples and a demonstration. Write today!

OCEANOGRAHY

AAAS Symposium Volume No. 67

“It is a tremendous record of work and mobilization of ideas, more than up to date, with plenty of well-judged prediction. . . . It is difficult to pick out outstanding examples from the thirty contributions, but those of Arrhenius, Bullard, Eriksson, Ewing, Malkus, Thorson, and Welander call for special mention.”

Endeavour, April 1962

Frequency synthesizer generates signals over the frequency range 0.0005 cy to 30 Mcy/sec with frequency continuously adjustable over that range. Resolution of frequency setting is 0.005 cy/sec over the entire range, which is covered by hand-calibrated scales having a total effective length of more than 5.99 m. Output voltage is calibrated and is continuously adjustable from 300 µV to 3 volts between d-c and 10 kcy/sec and from 100 µV to 1 volt between 30 cy and 30 Mcy/sec. Spurious frequencies are said to be more than 60 db down. Frequency range can be increased to the gigacycle region with accessory equipment. The instrument is housed in a single movable rack cabinet with space available to accommodate accessory frequency standards.—J.S. (Rohde & Schwartz, Dept. S950, 111 Lexington Ave., Passaic, N.J.)
