American Association for the Advancement of Science

BOARD OF DIRECTORS
Paul M. Gross, Retiring President, Chairman
Alan T. Waterman, President
Laurence M. Gould, President Elect
Henry Eyring
John W. Gardner
H. Bentley Glass
Don K. Price
Paul E. Kloosteg
Treasurer
Mina Rees
Walter Orr Roberts
Alfred S. Romer
H. Burr Steinbach
Dael Wolfe
Executive Officer
VICE PRESIDENTS AND SECRETARIES OF SECTIONS
MATHEMATICS (A) 
Magnus R. Hestenes 
Wallace Givens
PHYSICS (B) 
Elmer Hutchison 
Stanley S. Ballard
CHEMISTRY (C) 
Milton Orchin 
S. L. Mels
ASTRONOMY (D) 
Paul Herget 
Frank Bradshaw Wood
GEOLOGY AND GEOGRAPHY (E) 
John C. Reed 
Richard H. Mahard
ZOOLOGICAL SCIENCES (F) 
Dietrich Bodenstein 
David W. Bishop
BOTANICAL SCIENCES (G) 
Aaron J. Sharp 
Harriet B. Creighton
ANTHROPOLOGY (H) 
David A. Baeuereis 
Eleanor Leacock
PSYCHOLOGY (I) 
Lloyd G. Humphreys 
Frank W. Finger
SOCIAL AND ECONOMIC SCIENCES (K) 
Kingsley Davis 
Ithiel de Sola Pool
HISTORY AND PHILOSOPHY OF SCIENCE (L) 
Adolph Grünbaum 
N. Russell Hanson
ENGINEERING (M) 
Clarence E. Davies 
Leroy K. Wheelock
MEDICAL SCIENCES (N) 
Francis D. Moore 
Oscar Touster
DENTISTRY (Nd) 
Paul E. Boyle 
S. J. Kreshover
PHARMACEUTICAL SCIENCES (Np) 
Don E. Franche 
Joseph P. Buckler
AGRICULTURE (O) 
A. H. Moseman 
Howard B. Sprague
INDUSTRIAL SCIENCE (P) 
Alfred T. Waidelich 
Allen T. Bonnell
EDUCATION (Q) 
H. E. Wise 
Herbert A. Smith
INFORMATION AND COMMUNICATION (T) 
Foster E. Mohhardt 
Phyllis V. Parkins
STATISTICS (U) 
Harold Hotelling 
Morris B. Ulman
PACIFIC DIVISION
Phil E. Church 
Robert C. Miller 
Secretary
SOUTHWESTERN AND ROCKY MOUNTAIN DIVISION
Edwin R. Helwig 
President 
Marlowe G. Anderson 
Executive Secretary
ALASKA DIVISION
Allan H. Mick 
President 
George Dahlgren 
Executive Secretary

The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

SCIENCE

1 November 1963, Volume 142, Number 3592

Tightening Federal Budgets

Last month William Carey, executive assistant director of the Bureau of the Budget, warned the 17th National Conference on the Administration of Research that the rapidly increasing research and development budgets of the past two decades have brought us to a level at which "reaction is at last setting in. It is apparent in the scientific community. . . . It is apparent also in the Executive Branch of the Federal Government, where the budgetary pinch is becoming acute. And it is perhaps most spectacularly apparent in the Congress, where a mounting wail of frustration and uneasiness is being reflected in a rash of proposals to bring science and technology to heel."

We have not reached a ceiling; most of the scientific and technical agencies will have more money for 1964 than they had for 1963. But Carey's warning must be taken seriously nevertheless. The House of Representatives recently supplied jolting evidence by cutting the 1964 budget of the National Science Foundation by a whopping 45 percent and by forbidding that agency to start any new programs.

The Senate is now considering the NSF budget and, as it has in some other years, may vote a larger appropriation that will require a compromise between House and Senate levels. The Senate may do this, but so far it has had little encouragement to go above the House level; congressional files of telegrams and correspondence contain little evidence that scientists are objecting to the reduction in the NSF budget or to the restrictions on NSF operations.

The House action constitutes an immediate test of how scientists will react to a sudden cessation of the growth trends of past years. But Carey's paper, which was presented before the House acted, went beyond specific budgets to deal with a problem that results from a slowing down of the rate of growth: the necessity of developing rational means of assigning priorities. Someone will have to adjudicate the competing claims of Big Science and little science; apportion funds among fields; weigh the relative merits of spending for research, for facilities, and for the improvement of teaching; and decide how much is justified for high-energy physics, for oceanography, for radio astronomy, and for other fields in which the costs for basic facilities are high. Some far may fly before the decisions are reached, but in the process issues will be illuminated more clearly than they have been in the past. This will be good, but the decisions will still be painful.

In all of this there are two clear warnings. One is that unless the university and research scientists, the cognizant agencies (NIH, NSF, and others), and the President's scientific and budgetary aides learn to collaborate effectively in making the necessary decisions on priority, Congress will make those decisions. The other is that the spokesmen for science are going to have to do their homework more thoughtfully. We have grown lazy during the period of rapidly increasing appropriations. From now on it will be foolish to approach Congress with anything other than a strong and soundly documented case.—D.W.
