Lost Opportunities

Articles:

Ground Water in North America: H. E. Thomas and L. B. Leopold

The fast-growing demands on this natural resource expose a need to resolve many hydrological unknowns.

Biosynthesis of Unsaturated Fatty Acids in Microorganisms: J. Erwin and K. Bloch

Structure and biosynthetic pathways are compared and related to physiological properties of the organisms.

Comparative Failure in Science: B. G. Glaser

A recent study shows that this is not incompatible with stable careers for basic research scientists.

COVER
Southern Pacific's gravel and rock fill across Great Salt Lake, Utah, appears
as the wider, light line with curving ends. The darker, straight line is the wooden trestle (built in 1904) which
the fill replaced. Twenty-one kilometers (13 miles) long and 11½ meters (38 feet) wide at its crest, the fill car-
ries Southern Pacific's main line Overland Route between the Pacific Coast
and Chicago. It is traversed by two large box culverts which permit pas-
sage of small boats. See page 1027. [Southern Pacific]
